QUARTERLY RETURN  
OF  
MARRIAGES, BIRTHS, AND DEATHS  
REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF  
ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS  
DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,  
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

---

No. 241.] **Marriages**—*October, November, December, 1908.*  
**Births and Deaths**—*January, February, March, 1909.* [Price 9d.]

---

*General Register Office, Somerset House,  
26th April, 1909.*

**UNITED KINGDOM.**

The POPULATION of the UNITED KINGDOM in the middle of 1909 is estimated at 45,004,384 persons; that of England and Wales at 35,756,615, that of Scotland at 4,877,648, and that of Ireland at 4,370,121.

In the United Kingdom 287,250 *births* and 204,177 *deaths* were registered in the three months ended 31st March 1909. The natural increase of population was, therefore, 83,073. The number of *persons married* in the quarter ended 31st December 1908 was 164,654.

The birth-rate in the United Kingdom in the *first* quarter of 1909 was 25·9, and the death-rate 18·4, per 1000 of the estimated population. The marriage-rate in the *fourth* quarter of 1908 was 14·6 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

**Passenger Movement.**

According to a Return issued by the Board of Trade it appears that in the three months ended 31st March 1909, the total passenger movement between the United Kingdom and places outside Europe showed a net balance outward of 48,698 passengers, compared with a net balance inward of 2,995 passengers in the corresponding period of the previous year.

The net outward balance among persons of British origin amounted to 28,248 persons. Of these 21,294 were English, 270 Welsh, 5,319 Scottish, and 2,599 Irish passengers, whilst there was an inward balance of 1,234 British Colonial passengers. Compared with the numbers in the corresponding period of the previous year the net outward balance of English passengers showed an increase of 23 per cent., that of Welsh a decrease of 51 per cent., that of Scottish an increase of 71 per cent., and that of Irish an increase of 69 per cent., whilst the net inward balance of British Colonial passengers showed an increase of 29 per cent.

Among persons of foreign origin there was a net balance outward of 20,450, against a net balance inward of 24,554 in the corresponding period of the previous year.

#### ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,024 registration sub-districts of England and Wales in the three months ended 31st March 1909; and the MARRIAGES in 15,715 churches or chapels, in 15,274 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ended 31st December, 1908.

#### Marriages.

In the *fourth* quarter of 1908 the marriages of 139,962 persons were registered, being equal to an annual rate of 15·6 persons married per 1000 of the estimated population, against an average rate of 17·3 per 1000 in the fourth quarters of the ten years 1898–1907.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 12·4 in Herefordshire and in Shropshire, 13·2 in Sussex, 13·4 in Middlesex, 13·8 in Lancashire, and 13·9 in Surrey; the highest rates were 18·6 in Nottinghamshire, 18·9 in Suffolk, 19·2 in Glamorganshire, 19·5 in Cambridgeshire, 20·2 in Norfolk and 22·0 in Carmarthenshire.

#### Births.

The births registered in the *first* quarter of 1909 numbered 229,074, and were in the proportion of 26·0 annually per 1000 of the population; this is 2·4 per 1000 below the mean birth-rate in the ten preceding first quarters, and is the lowest birth-rate recorded in any first quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the lowest birth-rates during the quarter were 18·3 in Carnarvonshire, 18·6 in Sussex, 19·8 in Northamptonshire, 20·2 in Dorsetshire, 20·3 in Somersetshire, 20·9 in Buckinghamshire and in Cornwall, 21·1 in Herefordshire, and 21·3 in Bedfordshire; the highest rates were 29·0 in Northumberland, 30·0 in Staffordshire, 31·2 in Nottinghamshire, 33·5 in Durham, 35·4 in Glamorganshire, and 37·2 in Monmouthshire.

In 76 great towns the birth-rate averaged 26·7 per 1000, ranging from 14·5 in Hastings, 14·6 in Hornsey, 15·5 in Bournemouth, 16·1 in Halifax, 18·5 in Bradford, and 19·3 in Northampton, to 33·7 in St. Helens, 34·2 in Tynemouth, 34·3 in Newport (Mon.) and in Swansea, 34·8 in Wigan, 36·0 in Merthyr Tydfil, and 41·5 in Rhondda. In 143 smaller towns the mean birth-rate was 25·2 per 1000, and in the remainder of England and Wales, excluding the 219 chief towns, it was 25·5.

## Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 68,417, against 96,976, 69,267, and 84,052 in the first quarters of 1906, 1907, and 1908 respectively.

## Prices and Pauperism.

The average price of wheat per quarter, which had been 32s. 1d., 31s. 2d., and 31s. 8d., respectively in the preceding three quarters, was 33s. 11d. last quarter. The mean wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were :— of inferior beef, 5 $\frac{2}{3}$ d. ; of prime beef, 7 $\frac{3}{4}$ d. ; of inferior mutton, 4 $\frac{1}{4}$ d. ; of prime mutton, 8 $\frac{3}{4}$ d. Compared with the average prices in the preceding three months, the mean price of inferior beef showed an increase of 1 $\frac{3}{4}$ d., and that of prime beef an increase of  $\frac{2}{3}$ d. The mean price of inferior mutton showed a decrease of 1d., and that of prime mutton a decrease of  $\frac{1}{8}$ d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 17s. 5d. per ton, against 18s. 8d. per ton in the first quarter of 1908. The mean price of Consols was 83l. 17s. 8d., having been 84l. 6s. 6d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been 2l. 10s., since 28th May, 1908, was raised on the 14th January, 1909, to 3l. The mean rate during the quarter was 2l. 18s. 5d.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 846,145 exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 846,145 persons, 287,621 received in-door, and 558,524 out-door, relief. The proportion of the population in receipt of poor-law relief was 23·7 per 1000, against 23·1 and 23·2 per 1000 respectively in the first quarters of 1907 and 1908.

## Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72–91.

The weather of the quarter was, upon the whole, cold and dry, with an excess of bright sunshine in all the more western and southern parts of the country. The wind seldom rose to the force of a gale, but there was as a rule sufficient air movement to prevent the formation of fog, the prevalence of that element being smaller than in many recent years.

The year opened with a week of mild, quiet weather, but from the 7th to about the 19th of January the conditions were far less settled, owing to the extension southwards of large storm systems from the neighbourhood of Iceland. Strong winds from between South and West were experienced rather frequently, and more especially between the 14th and 17th of the month, when severe Westerly gales occurred in most parts of England and Ireland. Heavy snow fell at the same time in many northern districts, and large quantities of rain over the north-west quadrant of the United Kingdom, including the west of Scotland, the north of Ireland, the north-west of England and North Wales. After the 19th the weather became more

settled, and in many parts of England no further rain was experienced until the close of the first week in February. In some inland districts a good deal of fog prevailed at the close of January, but at the coast stations the weather was fine and bright, sharp frost occurring over the whole country between the 25th and 30th.

February was, as a rule, fair and quiet but, with a general prevalence in all the more southern districts of winds from some Easterly quarter, the thermometer was usually below its average level, the sharpest frosts occurring on the 5th and 6th, and between the 23rd and 25th. The only gale of any importance occurred on the 5th, when a sharp storm of brief duration from North-West and North swept down the east of England in the rear of a cyclonic disturbance which moved rapidly across these islands and the Continent. Rainfall was very deficient (in some parts of England the aggregate was less than a quarter of an inch) and bright sunshine was abundant especially in the week ending with the 24th, when the duration at some of our south coast stations amounted to between 60 and 65 hours, or to between 85 and 90 per cent. of the possible for the time of year.

In March the atmospheric conditions were quite abnormal; the average distribution of barometrical pressure, high in the south and low in the north, being completely reversed. Over a large portion of England the barometer only once rose to a height of 30.0 ins., the mean level of the mercury for the month being the lowest on record for the time of year. In the opening week frosts and snow-storms of great severity were experienced very generally, the thermometer in many places falling to as low a point as at any time during the three preceding winter months. For the remainder of the time the conditions were exceedingly changeable, with frequent falls of rain in all but the extreme north-western parts of the kingdom, where the weather was unusually dry. Over a large portion of England the month was the wettest March experienced for many years past, several places reporting a measurable quantity of rain on as many as 28, 29 or 30 days. Throughout the month there was a striking absence of spring-like warmth, no temperature as high as 60° being reported until nearly the end of the period, and then only in a few isolated places. At some stations in the south and east the thermometer in the shade never rose above 50°. In spite of the extremely unsettled character of the weather there was in all districts a striking absence of gales or strong winds.

For the quarter as a whole the *mean temperature* was below the average, the deficit being greatest (2° or rather more) in the southern parts of England. The highest readings were observed as a rule on March 29th, when the thermometer rose to 60° or slightly above it in the east of England, and at a few isolated places in the south and south-west, the highest value reported being 62° at Greenwich. The lowest temperatures occurred in the opening week of March, chiefly between the 3rd and 5th, when the sheltered thermometer fell to 10° or less in several parts of the country, to 3° at Swarraton (Hants) and Kingston-on-Soar, and to zero at Marlborough. On the surface of the ground a reading of 4° below zero was registered at Llangammarch Wells on March 4th and 5th. Next to this the sharpest frosts of the quarter occurred respectively between January 25th and 30th, and on or about February 23rd, the thermometer on each of these occasions falling below 15° in several parts of our Midland and Southern counties.

The *rainfall* of the quarter was below the average in all districts excepting England north-east and the English Channel. In England East and North-West the deficiency was less than 10 per cent., but in London it amounted to 16 per cent., in England Central to 17 per cent., and in South Wales with England South-West to 18 per cent. The number of days with a measurable quantity of precipitation agreed very closely with the normal, but was unequally distributed throughout the quarter, January and February being in this respect very dry, but March very wet. At some English stations there were in March only one or two days without rain or snow. The days with the heaviest individual falls of rain were January 14th in North Wales, and February 2nd and 4th in Cumberland and Lancashire; at Stonyhurst on the latter occasion more than  $3\frac{1}{2}$  ins. were measured in three days. The snow storms of March 5-7 yielded in several places more than an inch and a half of water in the gauge, the depth of snow on the ground amounting to a foot or more in many localities, and to about 2 feet in some parts of Kent.

*Bright sunshine* was in accordance with the average in England Central and England East, but was rather deficient in England North-East. In all other districts an excess was shown, the departure from the normal being greatest in England North-West. The finest weather occurred around the middle portions both of January and February; on the latter occasion, and in the week ending with the 24th the total duration at many southern stations was as large as anything hitherto recorded in the winter season.

### Deaths.

The deaths registered in England and Wales last quarter numbered 160,657, and were in the proportion of 18·2 annually per 1000 persons living; this rate is 0·2 per 1000 below the mean rate in the ten preceding first quarters. In registration counties with populations exceeding 100,000, the death-rates ranged from 14·8 in Essex, 15·1 in Kent, 15·4 in Middlesex, 16·6 in Derbyshire, 16·8 in Northamptonshire, and 16·9 in the East Riding of Yorkshire, to 19·1 in Hertfordshire and in Cambridgeshire, 19·2 in the North Riding of Yorkshire, 19·5 in Herefordshire, 20·1 in Lancashire, 20·2 in Warwickshire and 20·8 in Shropshire.

The 160,657 registered deaths included 80,331 of males and 80,326 of females, the death-rate among males being 18·9, and that among females 17·6, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding first quarters, the death-rate of males showed a decrease of 0·4, and that of females an increase of 0·1. Out of equal numbers living, the deaths of males were to those of females as 107 is to 100; the mean proportion in the first quarters of the ten preceding years having been 111 to 100.

### *Urban and Rural Mortality.*

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1909 is estimated at about sixteen and a half millions, the death-rate calculated without reference to sex and age constitution of the populations was 18·7 per 1000 living; the rates in the three preceding first quarters having been 16·5, 19·0 and 17·9. The crude rates in the several towns ranged from 10·2 in Hornsey, 11·1 in Walthamstow, 12·6 in East Ham, 12·7 in Handsworth (Staffs.),

13·3 in Gateshead, and 13·4 in Barrow in Furness, to 22·1 in Oldham, 22·2 in Manchester, 23·1 in Bury, 23·2 in Liverpool, 24·2 in Wigan, and 25·9 in St. Helens.

In 143 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at over five millions, the crude death-rate was 17·1 per 1000 living; the rates in the three preceding first quarters had been 15·2, 18·2, and 17·1.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns and more than seven and a half millions in rural districts, the crude death-rate was 18·1 per 1000 living; the rates in the three preceding first quarters having been 16·8, 18·4, and 17·8.

The crude death-rate, that is the proportion of deaths from all causes to each thousand of the population, is a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the sex and age constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xv.)

*March Quarter, 1909.*

— — —	Crude Death-rates.	Corrected Death-rates.
England and Wales ... ..	18·2	18·2
76 Great Towns ... ..	18·7	19·8
143 Smaller Towns ... ..	17·1	17·9
England and Wales, less the 219 Towns	18·1	17·0

It should further be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public Institutions the death-rate in the rural area may possibly be somewhat overstated.

*Mortality at Different Ages.*

Of the 160,657 deaths registered last quarter, 27,929 were those of infants under one year of age, 69,610 those of persons aged between one year and sixty years, and 63,118 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 122 per 1000, the average in the ten preceding first quarters having been 135. Among registration counties with populations exceeding 100,000, the lowest proportions were 95 in Kent, 96 in Surrey and in Buckinghamshire, 100 in Middlesex, and 102 in Hertfordshire and in Essex. The highest proportions were 139 in Cumberland, 141 in Carnarvonshire, 144 in the North Riding of Yorkshire, 145 in Nottinghamshire and in Denbighshire, and 163 in Carmarthenshire.

In the 76 great towns infantile mortality averaged 123 per 1000 births, being 1 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 72 in Barrow in Furness, 74 in Handsworth (Staffs.), 75 in Hornsey,

77 in Hastings, 80 in Wallasey, and 88 in Bootle; the highest were 158 in Swansea, 160 in Blackburn, 163 in Burnley, 167 in Nottingham, 170 in St. Helens, and 181 in Wigan. Among the 143 smaller towns infantile mortality averaged 121 per 1000 births, ranging from 44 in Loughborough, 45 in Scarborough, 50 in Waterloo with Seaforth, 57 in Margate, 60 in Southend on Sea, and 62 in Morley, to 179 in Hove, 184 in Stalybridge, 193 in Kidderminster, 208 in Dewsbury, 216 in Ilkeston, 233 in Bacup, and 254 in Tunstall. Excluding these 219 towns, infantile mortality in the remainder of England and Wales was also in the proportion of 121 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 8·8 per 1000 of the estimated population at this group of ages, being 0·2 below the mean rate in the ten preceding first quarters. In the 76 great towns the mean mortality at this age-group was 9·8 per 1000, ranging from 4·8 in Hornsey, 5·0 in Walthamstow, 5·8 in Hastings, 6·0 in East Ham, 6·1 in York, and 6·2 in Handsworth (Staffs), to 12·6 in Oldham, 13·1 in Liverpool, 13·2 in Manchester, 13·4 in Warrington, 13·7 in Middlesbrough, 13·8 in Wigan, and 17·5 in St. Helens. In the 143 smaller towns the mortality at this age-group averaged 8·1 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 96·7 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding first quarters having been 87·1. In the 76 great towns the mean mortality at this age-group was 104·6 per 1000; the lowest rates were 75·7 in Hornsey, 76·0 in Grimsby, 76·2 in Gateshead, 76·9 in Norwich, 77·3 in York, and 81·6 in Plymouth; the highest rates were 124·6 in Bradford, 124·9 in Salford, 125·9 in Oldham, 131·2 in Northampton, 135·9 in Bury, and 145·3 in Rochdale. In the 143 smaller towns the rate averaged 100·4 per 1000.

Compared with the mean rates in the ten preceding first quarters, the mortality of infants under one year of age showed a decrease of 9·6 per cent., that of persons between one year and sixty years of age a decrease of 2·2 per cent., and that of persons aged sixty years and upwards an increase of 11·0 per cent.

#### *Mortality from certain Epidemic Diseases.*

The 160,657 deaths from all causes include—

4,879	that were attributed to measles,
2,129	"          "          whooping-cough,
1,771	"          "          diphtheria,
933	"          "          diarrhœa,
813	"          "          scarlet fever,
646	"          "          "fever,"
8	"          "          small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 11,179 deaths were referred last quarter, being in the proportion of 1·26 per 1000 of the estimated population, or 0·06 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rate of mortality from measles exceeded the decennial average, while the rates from each of the other diseases were below the respective averages.

*Measles* was returned as the cause of 4,879 deaths last quarter, corresponding to an annual rate of 0·55 per 1000 of the population,

or 0·22 per 1000 above the average in the first quarters of the preceding ten years. Of the 55 registration counties, eight were free from measles fatality, and the death-rate did not exceed 0·02 per 1000 either in Somersetshire, Shropshire, Cumberland, or Monmouthshire. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·79 in Bedfordshire, 0·80 in Durham, 0·85 in the North Riding of Yorkshire, 0·95 in London, 1·06 in Leicestershire, and 1·70 in Warwickshire. In the 76 great towns measles caused an average mortality of 0·91 per 1000. In nine of these towns no deaths from this disease were registered. The highest death-rates were 2·58 per 1000 in Birmingham, 2·69 in Sunderland, 3·25 in Aston Manor, 3·93 in West Hartlepool, 4·83 in Warrington, and 5·99 in St. Helens. In the 143 smaller towns, measles was fatal on the average to 0·33 annually per 1000 living, and among these towns showed exceptional fatality in Bacup, Luton, Cheltenham, Glossop and Leigh (Lancs.). In the remainder of England and Wales the average measles death-rate was 0·21 per 1000. Among registration sub-districts outside the 219 chief towns, measles was especially fatal in Swavesey, Bromyard, Eastham (Cheshire), Royton, Maltby, and Pickering.

*Whooping-cough* accounted last quarter for 2129 deaths, and for a death-rate of 0·24 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·13 per 1000. In five of the counties no deaths from whooping-cough were registered last quarter. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·38 in Carnarvonshire, 0·42 in Nottinghamshire, 0·43 in Herefordshire, 0·44 in Staffordshire, 0·46 in Shropshire, and 0·64 in the North Riding of Yorkshire. In the 76 great towns whooping-cough caused an average death-rate of 0·30 per 1000 living. No deaths from this disease occurred in ten of these towns, and the rate did not exceed 0·03 in Oldham; but it was equal to 0·68 in Bury, 0·88 in Preston, 1·02 in Wigan and in Swansea, 1·05 in Great Yarmouth, and 1·18 in St. Helens. In the 143 smaller towns the average death-rate from whooping-cough was 0·18 per 1000, the disease being especially fatal in Burslem, Mansfield, Wednesbury, Darlington, Wallsend, and Tunstall. In the remainder of England and Wales whooping-cough caused an average mortality of 0·20 per 1000 annually. Among registration sub-districts outside the 219 chief towns, whooping-cough was exceptionally fatal in Oving, Ware, Deddington, Madeley (Shropshire), Southam, Gainsborough, and Ormesby.

*Diphtheria* (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,771 deaths, a number corresponding to an annual rate of 0·20 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·04 per 1000. In four counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·25 per 1000 in Middlesex and in the North Riding of Yorkshire, 0·27 in Warwickshire and in Denbighshire, 0·28 in Lincolnshire, 0·29 in the East Riding of Yorkshire, and 0·34 in Derbyshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·21 per 1000 of their aggregate population. Not one of these towns was free from diphtheria fatality; but only one death occurred in each of five of the towns. The highest death-rates were 0·36 in Tynemouth, 0·37 in Rotherham, 0·50 in Warrington, 0·53 in Salford, and 0·56 in Derby.

In the 143 smaller towns the mortality from this disease averaged 0·22 per 1000, the rate being highest in Tunstall, Maidstone, Gorton, and Lincoln. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·19 per 1000 living. Among registration sub-districts outside the 219 chief towns, diphtheria was especially fatal in Newhaven, Weston super Mare, Pleasley, Kirkham, Beverley, and Llandwrog.

*Diarrhœa* was the assigned cause of 933 deaths last quarter, corresponding to an annual rate of 0·11 per 1000, which is lower by 0·03 per 1000 than the decennial average rate for the first quarter of the year. In eight counties no deaths from diarrhœa were registered last quarter. Among counties with populations exceeding 100,000 persons, the highest death-rates were 0·14 per 1000 in London, in Norfolk, and in Somersetshire, 0·15 in Suffolk and in Shropshire, 0·16 in Staffordshire and in Worcestershire, and 0·26 in the North Riding of Yorkshire. In the 76 great towns the average death-rate from diarrhœa was 0·13 per 1000. Nine of the great towns were free from diarrhœa fatality; the highest death-rates were 0·29 per 1000 in Tynemouth, 0·30 in Burnley, 0·32 in York, 0·34 in Wallasey, 0·46 in Smethwick, and 0·61 in Middlesbrough. In the 143 smaller towns diarrhœa was fatal on the average to 0·09 per 1000 of the population, and caused the highest mortality in Stoke upon Trent and Longton. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·09 per 1000.

*Scarlet fever* accounted last quarter for the deaths of 813 persons, equal to a rate of 0·09 per 1000 living, or 0·03 per 1000 less than the decennial average rate for the first quarter. Ten of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·12 per 1000 in Cheshire, 0·13 in Staffordshire, 0·16 in Monmouthshire, 0·18 in Middlesex, 0·22 in Lancashire, and 0·25 in Dorsetshire. In the 76 great towns scarlet fever accounted for an average mortality of 0·12 per 1000 annually. No deaths from this disease were recorded in fourteen of these towns. The highest scarlet fever death-rates were 0·32 in Manchester, 0·34 in Kings Norton, 0·36 in Merthyr Tydfil, 0·43 in Liverpool, 0·47 in Blackburn, and 0·63 in St. Helens. In the 143 smaller towns scarlet fever was fatal in the average proportion of 0·08 per 1000 living, and caused the highest mortality in Longton, Bilston, and Hindley. In the remainder of England and Wales this disease caused an average death-rate of 0·06 per 1000 living. Among registration sub-districts outside the 219 chief towns scarlet fever was exceptionally fatal in Wath, Pontypool, Festiniog, and Tremadoc.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and "*pyrexia*" of uncertain origin) was the registered cause of 646 deaths last quarter, equal to an annual death-rate of 0·07 per 1000 of the population, or 0·03 per 1000 less than the average in the first quarters of the previous ten years. In eleven counties no deaths from fever were returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·10 in Cheshire, 0·11 in Carnarvonshire, 0·12 in the West Riding of Yorkshire and in Durham, 0·13 in Staffordshire, and 0·16 in Lancashire. In the 76 great towns fever caused an average mortality of 0·07 per 1000 annually. In twenty-five of these great towns no deaths from fever occurred; the towns with the highest fever death-rates were Bury and Oldham

where the rate was 0·20 per 1000, Grimsby 0·22, Manchester 0·31, Warrington and Salford 0·33, and Hanley 0·64. In the 143 smaller towns fever caused an average mortality of 0·09 per 1000 annually, the rate being highest in Rowley Regis and in Barnsley. In the remainder of England and Wales the death-rate from fever averaged 0·07 per 1000. Among registration sub-districts outside the 219 chief towns fever was especially fatal in East Stonehouse and Cardigan.

Eight deaths from *small-pox* were registered last quarter: the deaths in the four quarters immediately preceding numbered 0, 9, 3, and 0, respectively.

Of the 8 deaths from small-pox registered last quarter, 6 belonged to the City of Bristol.

### *Violent Deaths.*

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 5,160 last quarter, and corresponded to an annual rate of 0·59 per 1000 of the population, which is 0·03 per 1000 below the average in the ten preceding first quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·29 in Buckinghamshire, 0·31 in Somersetshire, 0·38 in Norfolk, 0·40 in Hertfordshire and in Essex, and 0·42 in Sussex and in Worcestershire; the highest rates were 0·66 in Derbyshire, in the West Riding of Yorkshire, and in Carnarvonshire, 0·68 in the North Riding of Yorkshire and in Durham, 0·81 in the East Riding of Yorkshire and in Glamorganshire, and 0·89 in Monmouthshire. In the 76 great towns the mean rate was 0·59 per 1000 living; among the several towns the rate was only 0·06 in Handsworth (Staffs.), 0·19 in Devonport, 0·21 in Gateshead, 0·24 in Hastings, and 0·25 in Hornsey; but it rose to 0·84 in Liverpool, 0·87 in Bootle, 0·89 in St. Helens, 0·96 in Hull, 1·05 in Stockton on Tees, and 1·06 in Rhondda.

### *Certification of Causes of Death.*

Of the 160,657 deaths registered in England and Wales last quarter, the causes of 147,834, or 92·0 per cent., were certified by registered medical practitioners, and the causes of 10,554, or 6·6 per cent., by coroners, after inquest; whilst the causes of the remaining 2,269, or 1·4 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding first quarters having been 1·8. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Hampshire, Middlesex, Buckinghamshire, Bedfordshire, Cornwall, Somersetshire, Gloucestershire, Cheshire, and in the East and North Ridings of Yorkshire, as well as in Glamorganshire, but it reached 3·1 in Derbyshire, 3·2 in Herefordshire, 3·4 in Carnarvonshire, and 3·8 in Durham. In the 76 great towns the mean proportion of uncertified deaths was 0·9 per cent.; but whilst no uncertified deaths were registered in Hornsey, Tottenham, West Ham, Leyton, Walthamstow, Brighton, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, Birkenhead, Wigan, or in York, the proportion per cent. rose to 3·1 in Kings Norton, 3·2 in South Shields, 3·3 in Liverpool, 3·4 in Bootle, 3·5 in Birmingham, 5·6 in West Bromwich, and 6·2 in Gateshead.

*Inquests.*

Inquests were held in England and Wales concerning 10,554, or 6·6 per cent., of the total deaths, the mean proportion in the ten preceding first quarters having been 6·5 per cent. In the 76 great towns the proportion of inquest cases averaged 7·5 per cent., ranging from 2·4 in Barrow in Furness, 2·5 in Gateshead, 3·1 in Warrington, 3·2 in Birmingham, and 3·5 in Kings Norton, to 10·2 in Newport (Mon.), 10·3 in Hull, 12·3 in Southampton, 14·0 in Derby, and 15·2 in Tottenham.

*Deaths in Public Institutions.*

The total deaths registered in England and Wales include 31,119, or 19·4 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding first quarters having been 16·6 per cent. In the 76 great towns the deaths in public institutions averaged 25·7 per cent. of the total deaths, the lowest percentages in the several towns being 2·5 in Rhondda, 6·7 in Handsworth (Staffs.), 9·8 in Smethwick, 10·0 in Barrow in Furness, 10·1 in Aston Manor, and 11·0 in Gateshead; the highest percentages were 25·9 in Birkenhead, 27·4 in West Ham, 28·6 in Manchester, 34·0 in Liverpool, and 37·2 in London.

**EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.**

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh ... ..	21·3	18·2
Glasgow ... ..	28·3	19·8
Dublin ... ..	29·0	25·7
Belfast ... ..	30·0	19·8

**COLONIAL AND FOREIGN CITIES.**

The Registrar-General has been favoured with returns of vital statistics by the authorities of 30 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 3rd April, 1909 (Table XIII.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the first quarter of 1909 were as follows:—

**BIRTH-RATES.**

	Highest per 1000 living.		Lowest per 1000 living.
Trieste ... ..	34·5	Brussels ... ..	18·4
Bucarest ... ..	32·3	Paris ... ..	18·7
Toronto ... ..	29·8	Antwerp ... ..	20·1
Breslau ... ..	29·8	Vienna ... ..	22·2
Copenhagen ... ..	28·7	Berlin ... ..	22·3
		Prague ... ..	22·3
London ... 25·3			

## DEATH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Moscow ... ..	30·0	Christiania ... ..	13·6
Trieste ... ..	28·3	Amsterdam ... ..	15·1
Venice ... ..	27·9	Chicago ... ..	15·1
St. Petersburg ... ..	27·5	Brussels ... ..	15·5
Bucarest ... ..	27·1	Antwerp ... ..	15·5
Rio de Janeiro ... ..	23·5	Stockholm ... ..	15·6
London ... 19·0			

*Small-pox* caused 202 deaths in Rio de Janeiro, 112 in Moscow, 25 in St. Petersburg, 2 in Paris, and 1 in New York.

*Asiatic Cholera* caused 429 deaths in St. Petersburg and 1 in Moscow.

*Measles* was most fatal, in proportion to population, in St. Petersburg, Moscow, Munich, Vienna, Copenhagen, and Amsterdam; *scarlet fever* in Moscow, Bucarest, St. Petersburg and Prague; *diphtheria* in Toronto, New York, St. Petersburg, Moscow, and Venice; *whooping-cough* in Copenhagen, Christiania, and Amsterdam; "*fever*" in Moscow, St. Petersburg, Philadelphia, New Orleans, and Toronto; and *diarrhæal diseases* in Moscow, St. Petersburg, Munich, Breslau, New Orleans, Prague, and Venice.

*Infantile Mortality*.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 79 in Christiania, 81 in Amsterdam, 100 in Paris, and 106 in Stockholm to 175 in Bucarest, 176 in Prague, 185 in Vienna, 188 in Munich, 190 in Venice, and 210 in Trieste.

INDIAN CITIES.—The death-rate was equal to 41·1 per 1000 in Bombay, 37·4 in Calcutta, and 36·1 in Madras. *Small-pox* caused 2,821 deaths in Calcutta, 193 in Bombay, and 18 in Madras; *measles* caused 36 deaths in Madras, 27 in Bombay, and 26 in Calcutta. Under the heading "*fever*" 2,542 deaths were returned in Bombay, 1,892 in Calcutta, and 1,439 in Madras, including 1,765 deaths from *plague* in Bombay, 531 in Calcutta, and 1 in Madras. The mortality from *diarrhæal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 687 deaths in Calcutta, 29 in Bombay, and 11 in Madras.

## RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 3rd April, 1909 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.—76 Great Towns.—Population: Births, Deaths, and Meteorology in the 13 Weeks ended 3rd April, 1909.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

\* The values for Mean Temperature and Rainfall relate to the calendar quarter.

† The figures for Edinburgh and Glasgow are for the calendar quarter. In addition to the deaths in Col. 12, 5 deaths in Edinburgh and 19 in Glasgow were registered as due to Cerebro-spinal meningitis, Epidemic Cerebro-spinal meningitis, Epidemic meningitis, or Cerebro-spinal fever. Deaths in Col. 13 include those from Enteritis and Gastro-enteritis also.

‡ Including deaths of persons admitted into public institutions from without the boundaries of Dublin and Belfast respectively. In addition to the deaths in Col. 12 there were

Phoenix Park

Fitzwilliam Square.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been corrected for the respective areas to which they belong.

						Average in First 13 weeks of the Year 1900-08.	Registered in 13 weeks ended 3 April 1909.																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																																										

The Registration Districts, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

\* See page 2, note.

† For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrar.

## II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.		Area in Statute Acres.	Enumerated Population, 1901.	Marriages Registered in Quarter ended 31 Dec. 1905.	Births Registered in Quarter ended 31 Mar. 1906. \* The Registration Sub-districts (2024 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

<sup>a</sup> 621. 1.—The 5 deaths from measles belonged to Llanrwst Urban District.

<sup>b</sup> 625. 2.—The 5 deaths from scarlet fever belonged to Festiniog Urban District.

<sup>c</sup> 625. 3.—The 3 deaths from scarlet fever occurred in the same house at Llanfangel y pennant.

<sup>d</sup> 627. 1.—The 4 deaths from diphtheria occurred in the parish of Llanfyllini.

<sup>e</sup> 627. 2.—Of the 6 deaths from whooping-cough, 5 belonged to the parish of Llanfair is Gaer.

<sup>f</sup> 628. 2.—The 7 deaths from measles belonged to the City of Bangor.

<sup>g</sup> 628. 4.—Of the 4 deaths from measles, 3 belonged to the parish of Llanllechid.

# CHANGES IN REGISTRATION DISTRICTS AND SUB-DISTRICTS IN THE QUARTER ENDED 31ST MARCH, 1909.

*Changes in Registration boundaries are made by order of the Registrar-General, with the consent of the Local Government Board. Those changes which affect the boundaries of Registration Districts are necessitated by changes in the boundaries of Poor Law Unions.*

Date when change came into operation.	DISTRICT and Sub-district.				Name of Parish transferred.	Population. 1901.

# METEOROLOGY.

---

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING  
THE QUARTER ENDED MARCH 31ST, 1909.

EXTRACTED FROM THE  
MONTHLY WEATHER REPORTS  
OF THE  
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 209 STATIONS,  
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56  
STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

---

## JANUARY, 1909.

**Pressure, Winds and Weather.**—The mean atmospheric pressure over the United Kingdom for the month of January was above the normal at all stations, the excess being very slight, 0·01 in., in Shetland, but southward of Aberdeen it was everywhere more than 0·1 in., as much as 0·22 in. along the south of Ireland and at Scilly. There was thus an appreciable increase in the gradient across the country, to 0·49 in. between Sumburgh Head and Jersey, against the normal of 0·32 in. The mean distribution was in fair accordance with the average, the highest values, above 30·25 ins., being found from the Bay of Biscay eastward to the central and eastern parts of the Continent. To the northward and north-westward the readings show a more or less steady diminution, to 29·74 ins. in Shetland, and to 29·26 ins. in the south-west of Iceland, so that there was a difference of rather more than an inch between Brest and Reykjavik, a distance of 1,100 miles. This pressure distribution was associated with the general prevalence of a South-Westerly type of conditions over the British Isles. Southerly to Westerly winds were largely in the ascendant, excepting in the more southern districts of England, where the direction was much more variable, Easterly, North-Easterly and North-Westerly currents being well represented. The range of pressure exceeded 2·1 ins. at Wick, and 2 ins. at Aberdeen, but over the south-west of England, at Bath, Portland Bill, Jersey and Scilly, it was less than 1·4 in.

At the commencement of the month the whole country was embraced by an extensive continental anticyclone, whose central space was transferred slowly westward from Russia, where, in the Moscow neighbourhood, the barometer stood at about 31 ins. on the 1st. At Jersey the barometer rose to 30·78 ins. on the 2nd, and two days later to 30·75 ins. at Oxford, the highest readings of the month. On the 6th the region of maximum pressure passed from the Continent to the Bay of Biscay. During this period disturbances were found about Iceland, and their influence on the conditions over the British Isles was very slight, the weather generally being of a quiet character, mild, cloudy to showery, and with little wind.

From the 7th to the 19th the area of highest pressure was nearly always to the south-westward of our coasts and down the Bay of Biscay to the Spanish Peninsula, while disturbances visited Norway and Sweden, as well as Iceland and the intervening sea. The transfer of the first of this series of disturbances from beyond the north of Iceland to Norway and down to the Baltic, between the 6th and the 8th marked the beginning of a spell of unsettled conditions over these Islands. Strong to high Southerly to Westerly winds were felt almost daily in many neighbourhoods, frequently increasing to the force of a gale, mainly on the more exposed sections of the southern, western and northern coasts. On the 7th a strong Westerly gale was experienced at Sumburgh Head, Stornoway and Holyhead, a whole gale at Wick; and on the 8th a strong Northerly gale at Holyhead and Spurn Head, and a whole

North-Westerly gale at Malin Head. The anemometrical records show that on the 7th, in gusts, the wind attained a velocity at the rate of 69 miles an hour at Southport, and on the 8th gusts of 64 miles at Alnwick. With the break in the weather thunderstorms occurred in western Scotland on the 6th, and in many parts of Scotland and England on the 7th, but no large falls of rain were reported.

Deep cyclonic systems continued to traverse the regions about the Arctic Circle, but for an interval of nearly a week their effect on our weather was less marked, there being very few instances of the Westerly current exceeding the force of a strong or high wind. On the morning of the 13th a small secondary disturbance appeared over the English Channel, and a large and deep primary system to the southward of Iceland. The former passed away eastward without materially affecting the conditions, while the northern disturbance brought about very stormy weather, much rain, with some hail, falling over the Kingdom generally, considerable quantities of sleet or snow in Scotland and Ireland. The depression followed an erratic path. By the afternoon of the 13th the pressure minimum, below 28·5 ins., was near the Farøe; it remained in that neighbourhood until the night of the 14th, then moved up to eastern Iceland, and on the 16th disappeared north-eastward beyond the Arctic Circle. It was a very extensive system, one portion covering a great part of Europe, the barometer at one time being below 29·5 ins. over the whole of the British Isles and from the Bay of Biscay across northern France and Germany to the Baltic and Scandinavia. At the home stations the lowest reading was 28·35 ins. at Wick, early on the 14th, and many other places had readings below 29 ins. Strong to high winds from Westerly points were experienced all over the country, gales in numerous localities—between the 13th and 16th a strong gale at Blacksod Point, Holyhead, Pembroke, Portland Bill and Jersey, a whole gale at Malin Head, and a storm at Scilly; the anemometrical records disclose a mean hourly velocity of 51 miles at Fleetwood on the 14th and 16th, while there were several instances of gusts at the rate of 60 or more miles per hour, 66 miles at Holyhead on the 14th, and at Aberdeen on the 15th, 65 miles at Alnwick, and 76 miles at Scilly on the 16th. Thunderstorms visited many parts of the Kingdom, and the precipitation was very heavy in the western half—on the 13th an inch at Kinlochewe and Fort Augustus, on the 14th exceeding an inch at Caragh Lake and Dunfanaghy (Ireland), Bethesda and Bettws-y-Coed (Wales), and Ardnadam (Scotland), and on the 16th Kinlochewe had another inch, and Ardnadam and Laudale over an inch. In many districts the precipitation was in the form of snow, which in various parts of Ireland and Scotland interfered greatly with road and railway traffic.

No sooner had this disturbance disappeared than another and deeper one reached the south of Iceland, where the barometer fell to nearly 28 ins. on the 17th. The system rapidly expanded over the British Isles, where, however, pressure did not descend as low as 29 ins. at any station; the wind backed more Southerly and again increased, a strong South-Westerly gale blowing at Blacksod Point, Roche's Point (with gusts at the rate of 61 miles an hour), and Holyhead on the 17th and 18th. Further very heavy precipitation occurred in the far west and north on the 17th, exceeding an inch in Ireland at Dunfanaghy, Caragh Lake, Ennistymon, Blacksod Point, Carrigallen, Markree Castle, and amounting to 2·2 ins. at Mallaranny; and in Scotland at Thorntonhall, Laudale, Kinlochewe, Ardnadam, Poltalloch, Fort Augustus, Glencarron, Crieff, and as much as 2·5 ins. at Fort William. At Ardnadam the five days, 13th to 17th, yielded 5·8 ins. In both countries great inconvenience and considerable damage and losses were occasioned by floods resulting from the heavy rain and snowfalls of this period, and at Kilmore, Galway, an immense bog slide overwhelmed houses and cattle, and submerged the roads, rivers and landmarks of the district. The pressure minimum remained in the Iceland region until the 19th, then disappeared to the north-eastward.

A complete change in the conditions marked the remainder of the month, a dry, quiet, anticyclonic type being the dominant feature, the high pressure system advancing from the Atlantic and passing beyond the North Sea, while depressions still affected Iceland and northern Scandinavia. Hitherto mildness had been the feature of the month, temperature maintaining a moderately high level. There were hardly any instances of afternoon maxima above 55°, and only a few night frosts. After the 19th there was increasing cold, and frost of more or less severity became general over England, less marked in Scotland, and still less so in Ireland. Between the 25th and 30th there were numerous records of shade minima below 20°, 14° at Garforth, 13° at Llangammarch Wells, Buxton and Harrogate, and 11° at Wokingham. On some days the afternoon maxima were below 30°, only 27° at Llangammarch Wells and Bradford, and 26° at Huddersfield on the 27th. This period was also very dry, little or no rain falling over a large extent of country after the 17th or 18th. No rain was registered during the thirteen days, 19th to 31st, at Portland Bill, Weymouth, Parkstone (Dorset), Ventnor, Maidenhead, Isleworth, Garforth and Hovingham Hall (Yorks), and many other places had none on twelve consecutive days.

Much fog was experienced inland towards the close of the month, the Metropolis being visited on the 27th and 28th by the densest for some time past. The fog area was surrounded by brilliant sunshine—from seven to eight hours daily. Along the south and east coasts of England the atmosphere was rather foggy at times during the first four days of the month; on the western Channel from the 20th to the 23rd; on the English Channel from the 25th to the 29th; and on the east coast from the 19th to the 30th. There was a general decrease in the temperature of the sea water round our coasts, but it was still higher than that of the air on shore, by as much as 4° to 6° in several localities.

**Rainfall.**—There was an excess of precipitation over Scotland and in some parts of northern Ireland, small as a rule, but at Fort William there was an excess of 3·2 ins. Over the rest of the Kingdom there was a deficiency, of more than an inch in many localities, more than 2 ins. at Douglas, Waterford and Valencia, and as much as 3·4 ins. at Roche's Point. The largest aggregates were 12·3 ins. at Fort William, 10·6 ins. at Ardnadam, and 10·2 ins. at Laudale, but at a very large number of stations the totals were less than an inch; Sandwich, Spurn Head and Worcester Lodge (Forest of Dean) less than half an inch. Rain was registered on every day at Balta Sound, on 30 days at Castlebay, and on 29 days at some other north-western stations, while generally the frequency was small, less than 10 days in various neighbourhoods, 7 days at Beaconsfield, and 6 at Cuckfield.

**Bright Sunshine.**—There was a general excess of sunshine excepting in Ireland and the west and north of Scotland, Durham being 30 hours to the good, and Newquay 34 hours. Dover totalled 89 hours (35 per cent. of the possible duration), Newquay 87 hours (34 per cent.), and Felixstowe 84 hours (33 per cent.); but Manchester City had only 15 hours (6 per cent.), Fort Augustus 12 hours (5 per cent.), and Balta Sound 6 hours (3 per cent.).

## FEBRUARY, 1909.

**Pressure, Winds and Weather.**—The distribution of atmospheric pressure during the month under review was somewhat abnormal, not only over the British Isles, but over surrounding regions also. Disturbances were few in number and their movements were irregular and uncertain, the extremes of pressure being found in the neighbourhood of the Gulf of Bothnia, where the barometer descended to 28·7 ins. on the 15th, and rose to 30·8 ins. some ten days later. As a general rule pressure was at a moderately high level over and in the immediate vicinity of the United Kingdom, the anticyclonic systems, however, continually shifting to and fro, sometimes found out on the Atlantic, and at others centred over various parts of Western, Central, or Northern Europe. The central space of only one of these high pressure areas visited this country. It appeared originally on the evening of the 9th, as two separate Arctic systems, one between Iceland and Greenland, the other in the White Sea region. On the 11th they coalesced over Southern Norway, and then moved slowly south-westward across Scotland and Ireland, meanwhile increasing considerably in intensity, so that the barometer rose to 30·6 ins. and upwards all over Ireland and Wales, and on the morning of the 14th it touched 30·69 ins. at Roche's Point, the highest reading reported during the month in these islands. There were few other occasions when the mercury, under the influence of Continental high pressure systems, rose as high as 30·5 ins., but in the night of the 25th an anticyclone over Northern Europe gave readings above 30·6 ins. in Scotland, 30·66 ins. at Sumburgh Head. Reports from steamships supplied by wireless telegraphy show that these anomalous high pressure conditions were also in the ascendant on the eastern side of the Atlantic; the few disturbances encountered were of an unimportant character, and hardly any of them appear to have advanced to the eastward of the 20th meridian. Under these circumstances the mean distribution of pressure differed rather considerably from the normal. Throughout the United Kingdom the barometer values were well above the average, by more than 0·1 in. at Jersey and Dungeness, and by more than 0·2 in. at the great majority of stations, as much as 0·26 in. at Stornoway. This resulted in reducing the mean gradient between Jersey and Sumburgh Head from 0·26 in. to 0·13 in. Over the southern half of England the mean isobar for 30·1 ins. forms a closed curve, and as far north as Shetland the readings are above 30 ins., diminishing northward and westward to below 29·65 ins. in the south-west of Iceland. In the absence of great and deep depressions the absolute range of pressure was very moderate, amounting to an inch on our south-western coasts, from Valencia to Jersey, and exceeding 1½ in. over North Britain and the North of Ireland, nearly 1·6 in. in Shetland. With pressure differing so markedly from the normal the winds varied greatly in direction all over the country, Southerly to Westerly and North-Westerly being the most frequent in the northern and north-western districts, and North-Easterly to South-Easterly over the more southern districts, so that an anticyclonic circulation is found round the space of maximum barometer values. As may be inferred from

the general pressure conditions the month was as a whole of a quiet type, seldom interrupted by winds of any great strength.

The centres of the low pressure systems observed during the month were in nearly all cases situated far away from our coasts—about Iceland, Northern and Eastern Europe, or on the Mediterranean. A depression which passed from the Iceland region across to Scandinavia in the early days of the month occasioned an increase of the Westerly current to a strong, or high wind in many parts of the United Kingdom, but the most striking feature associated with the passage of the system was the very heavy rain which fell in a few localities:—On the 2nd, 1 in. at Oban, 1·1 in. at Fort Augustus and Pottallock, 1·3 in. at Thortonhall, 1·4 in. at Graythwaite, 1·7 in. at Fort William, 1·8 in. at Kilmarnock, 2·6 ins. at Glencarron, and 3 ins. at Kinlochewe and Laudale; on the 3rd, 1 in. at Lancaster, 1·1 in. at Burnley, Kirkby Lonsdale and Mallaranny, 1·2 in. at Uldale, 2 ins. at Stonyhurst and Graythwaite, and 2·5 ins. at Gruline (Mull); on the 4th, 1·3 in. at Malin Head, and 1·1 in. at Marchmont. Nearly all these stations are in the north-western quarter of the country—other districts were practically unaffected. In the Uldale portion of Cumberland the heavy rainfall of the 3rd resulted in a great flood on the following day.

In the evening of the 4th there were some indications of the existence of a disturbance at some distance beyond our north-western coasts, and subsequent observations showed it to be a very rapidly moving low pressure system. By the morning of the 5th its centre had already crossed the country, and was situated off the Yorkshire coast. Continuing its swift eastward course it was disappearing across the Crimea by the evening of the 6th. It was of only moderate depth, 29½ ins. in the north-east of England on the morning of the 5th, but it produced a strong or high North-Westerly to Northerly wind in many districts, a gale at Holyhead and over the inland counties of England, a strong gale at Yarmouth, and a whole gale at Spurn Head. At Southport the anemometer registered a mean hourly velocity of 48 miles, and at Fleetwood 51 miles, while at Gorleston gusts at the rate of 60 miles per hour were recorded. An inch of rain fell at Alnwick Castle.

Shallow local disturbances, secondaries to a main system near Iceland, caused rather heavy local rains in the south-west of Ireland and the west of Scotland between the 6th and the 9th—on the 6th 1 in. at Cahirciveen and Valencia Island, and 1·1 in. at Lickeen; on the 7th, 1·4 in. at Cahirciveen and Caragh Lake, and 1·7 in. at Valencia Island; on the 8th, 1·5 in. at Laudale; and on the 9th, 1·8 in. at Gruline.

On the evening of the 9th the Iceland disturbance began to spread in a south-easterly direction, and by the morning of the 10th its central space extended down the east coast of Britain, subsequently passing down to France and on to the Mediterranean. Strong to high Westerly to Northerly winds were felt in many districts, but only in a few isolated neighbourhoods was the force of a gale reached, and with the exception of 1·1 in. of rain at Clacton-on-Sea the precipitation presented no unusual features.

These disturbances, however, were of such short duration that they were of minor importance in their influence upon the character of the month, which was determined in the main by the decided predominance of anticyclonic conditions. Apart from the heavy local rains to which reference has been made, the period was very dry in nearly all parts of the Kingdom. In many places the rainless weather which set in about January 19th or 20th was maintained unbroken through the first seven or eight days of February. Then there were some trivial showers on one or two days, followed by another rainless spell of from fourteen to eighteen consecutive days from about the 10th or 12th. At Cuckfield (Sussex) rain was measured on one day only during the month; at Dursley (Gloucestershire) on two days, and at a number of other places on three or four days. Quite at the close of the month snow was setting in. With the prevalent dryness there was much fine bright weather. This was particularly noticeable over England during the seven days, 18th to 24th, when the duration of bright sunshine was abnormally large, numerous localities aggregating more than 50 hours, some of the Channel stations exceeding 60 hours, up to 63 at Bournemouth, 64 at Worthing, and over 65 at Jersey and Hastings, these last being equal to 90 per cent. of the possible duration—a very exceptional record for the time of year. Notwithstanding the dryness and brightness the weather was almost continuously cold, there being very few instances of afternoon temperatures above 55°, nearly all on the 4th, 58° at Cambridge and Epsom, and 59° at Killarney. From the middle of the month low temperatures ruled persistently, shade minima below 25° being common, and on the 23rd, 15° was registered at Cirencester, Maidenhead, and Woburn, 14° at Llangammarch Wells and Marlborough, 11° at Raunds, and 7° at Wokingham. Thunderstorms were almost entirely absent.

Fog was rarely reported inland and even along the coasts it was less frequent than usual, but between the 21st and 26th many places on the coasts of Ireland were visited.

The temperature of the sea-water along our shores showed a further decline, as compared with January, in most localities, but off the north-west of Ireland and the north-east of Britain a recovery had set in, the improvement amounting to a degree in places. Nearly everywhere the water was warmer than the air on shore, to the extent of  $3^{\circ}$  or  $4^{\circ}$  in several localities,  $6^{\circ}$  at Plymouth and Wick.

Aurora was witnessed at Deerness on the nights of the 22nd and 23rd.

A remarkable meteor was seen over Southern England on the evening of the 22nd, moving slowly from East to West, leaving a luminous streak which remained visible for the exceptionally long period of more than two hours.

**Rainfall.**—Practically all over the country the precipitation, in the form of rain, hail, or snow, was below the normal, the deficiency being over 2 ins. at several western stations, 3.1 ins. at Arlington, and 3.5 ins. at Fort William. At Gruline 8 ins. fell, and at Laudale  $6\frac{3}{4}$  ins., but there were very few other aggregates of as much as 5 ins. As a general rule the totals were less than an inch, in a large proportion of cases less than half-an-inch, only 0.24 in. at Cambridge, 0.22 in. at Brandon (Suffolk), and 0.12 in. at Cuckfield. Precipitation was measured on 21 days at Balta Sound and Caragh Lake, and on 20 days at Wick, but at the great majority of stations on less than ten days.

**Bright Sunshine.**—Over Ireland, the greater part of Scotland and the north-east of England there was a deficiency of bright sunshine, while over the rest of England there was a considerable excess, Markree Castle showing a loss of 32 hours, against a gain of 51 hours at Eastbourne, and 52 hours at Plymouth. The aggregate totals ranged from 30 hours (11 per cent. of the possible duration) at Markree Castle, and 35 hours (13 per cent.) at Newcastle-on-Tyne, to 136 hours (49 per cent.) at Salcombe, 137 hours (50 per cent.) at Worthing, and 140 hours (51 per cent.) at Rousdon.

## MARCH, 1909.

**Pressure, Winds and Weather.**—The mean distribution of atmospheric pressure for March was quite exceptional, disclosing a complete reversal of the normal conditions, and affording a clue to the unusually unsettled character of the weather. A closed space across the face of the Bristol Channel indicates the position of the lowest pressure, the values at Pembroke and Scilly being below 29.5 ins., those over England and the greater part of Ireland being only slightly higher. Northward they increased to nearly 29.65 ins. in the north of the Hebrides and in Shetland. Still increasing northward the region of highest pressure was situated beyond the north of Iceland, where the mean barometer was above 30.06 ins. This displacement of the normal conditions affected such a vast area that even at the Azores the month's pressure was below 30 ins. Compared with the normals the values over these islands were far lower than usual, the deficiency at Scilly being as much as  $0.43$  in., and at several other southern stations exceeding  $0.4$  in., the deficiency diminishing northward to rather more than  $0.12$  in. in Shetland and the Hebrides. While on various occasions the barometer descended below 29 ins. there were very few days on which it passed above 30 ins., and on the south-east coast of England there was no reading as high as 30 ins. Consequently the range of pressure during the month was small, less than an inch over the south-east quarter of England,  $0.85$  in. at Dover, and only at some of the west coast stations did it exceed  $1\frac{1}{4}$  in., amounting to nearly  $1.7$  in. at Blacksod Point and Valencia, the only stations above  $1\frac{1}{2}$  ins. The distribution of the winds shows a strongly marked cyclonic circulation round the Bristol Channel pressure minimum. Easterly to Northerly and North-Westerly breezes largely prevailed over the northern and western parts of the Kingdom, Stornoway reporting no wind in the south-western half of the compass, Scilly had a fair distribution in all quarters, while southern England had a prevalence of Westerly to Southerly and Easterly, Jersey having only one or two observations in the north-eastern half of the compass. Notwithstanding the very disturbed conditions prevalent throughout the month the winds were generally of little force, there being comparatively few records of more than a strong breeze.

An inspection of the series of daily maps covering Europe and the eastern half of the Atlantic (information from the latter region being received by wireless telegraphy from a number of steamers) shows that the atmospheric conditions during the month were divided into two nearly equal parts. For about seventeen days pressure was almost continuously high over the Iceland region and thence down the Atlantic, beyond our western coasts, to and beyond the Azores. This anticyclone was of only moderate intensity, no barometric readings as high as  $30\frac{1}{2}$  ins. being reported. Of the disturbances which appeared to the eastward of the Banks of Newfoundland during this period, not one made its way to the British Isles, advancing instead on about a south-easterly path towards the Spanish Peninsula and Madeira. The low pressure systems which affected our weather were found in the vicinity of our southern and eastern coasts, all of them very slow-moving, and following most irregular paths. Within the seventeen days only three

depressions came into our immediate neighbourhood. A disturbance which appeared over Norway on the 1st passed down to the Irish Sea by next day, then followed a path to the Isle of Wight, across the Netherlands, to the North Sea and thence to the Baltic. On the morning of the 5th, when the system had worked back to the North Sea, it expanded westward across the British Isles, and a separate space of minimum pressure was formed off the south-west of Ireland. The progress of this area was much more complex than that of the parent system. At a very slow pace it advanced to the western end of the English Channel, then worked round by Lancashire and the Irish Sea back to the mouth of the English Channel, down to the lower part of the Bay of Biscay, up the west of France and then down the Bay again, where it dispersed on the 12th, having occupied a week on the journey. No sooner had it collapsed than another formed over Copenhagen on the evening of the 12th, and like its predecessor, following a tortuous path, it was off the Yorkshire coast on the morning of the 14th, passed slowly down to Belgium, curved round to Holland, and there died out on the 16th. Throughout the first half of the month, therefore, pressure was persistently low over our southern and eastern districts, the lowest barometer reading reported being 28·98 ins. at Portland Bill and Guernsey on the evening of the 6th, while from the 8th to the 13th readings above 30 ins. were registered in the extreme north and west, the highest point for the month, 30·3 ins., being reached at Castlebay and Blacksod Point on the morning of the 12th.

It will be gathered from these facts that the pressure distribution favoured winds from between East and North or North-West over nearly the whole Kingdom. In the absence, however, of steep gradients the period, although extremely unsettled, was far from stormy, the records of gale force being exceptionally rare, the only instances of a strong gale being on the 7th at Aberdeen, when the anemometer registered a gust with a velocity at the rate of 62 miles per hour, and at Wick. The weather itself was of the most inclement character, cold rain, snow, sleet or hail being experienced every day over the country generally. Some of the principal snowfalls recorded were:—on the 2nd, Aspatria and Carlisle 6 ins., Oundle 9 ins.; 3rd, Sparkhill, Birmingham, 7 ins., Belvoir Castle 8½ ins., and Epsom 10 ins.; 3rd and 4th, Tonbridge, 22 ins.; 6th, Uldale 6 ins., Belvoir Castle 8 ins., Tenbury 8½ ins.; 7th, Huddersfield 10 ins. and Sparkhill 11 ins. Records of an inch or more of rain or melted snow were numerous. On the 3rd 1·9 in. at Dungeness (snow); on the 5th 1·5 in. at Plymouth; on the 6th 1·5 in. at Sparkhill (snow), 1·6 in. at Salisbury and Shaftesbury, 1·9 in. at Abergavenny; on the 7th 1·5 in. at Ardross Castle and Crathes (snow) 1·6 in. at Mallaranny, and 2 ins. at Balmoral (snow); on the 8th 1·6 in. at Barnstaple; and on the 9th 1·5 in. at Ampleforth Abbey. These very unsettled conditions were also marked by cold of unusual severity. There was a general absence of afternoon temperatures above 50°, the maxima being frequently below 40°, and in the first week many places failed to pass above 32°, the lowest maximum, 30°, being at Birmingham on the 3rd, at Sparkhill on the 3rd and 4th, and at Morpeth on the 4th. Night frosts of great severity were recorded, there being a very large number of shade minima below 20°, and even those below 10° are too numerous to mention individually. Marlborough reported 0° on the 3rd, West Linton 1° on the 5th, Swarraton 3° on the 3rd, and Kingston-on-Soar 3° on the 5th, and Balmoral 5° on the 6th. At the close of the period, on the 17th, Wokingham dropped to 8°, Llangamarch Wells to 12° and Marlborough to 13°. At Totland Bay the 3rd was the coldest March day in 23 years, since observations were commenced, minimum below 20°, maximum 32°.

During the remainder of the month the type of conditions was of a different character. Pressure was continuously low, but the depressions all came to us from the Atlantic. Two of these dispersed near the Irish coast, one on the English Channel, and three moved eastward across Ireland, England and the North Sea. On the 18th the barometer fell to 28·61 in. at Valencia, the month's lowest record, to 28·89 ins. at Shields on the 25th, and to 28·87 ins. at Holyhead on the 29th. The winds were now more from Westerly (Southerly to North-Westerly) directions, but gales were again very rare, only Scilly and Roche's Point reporting a strong South-Easterly gale on the 18th. Snow gave way to daily falls of rain, which were occasionally very heavy locally, 1·6 in. at Graythwaite on the 28th. There was a considerable improvement in the temperature, but it was not until the 29th that a few places passed up into the sixties, 61° at Cromer, Hillington, Geldeston, Camden Town and Maidenhead, and 62° at Greenwich. In several localities, however, the thermometer failed to touch 50° throughout the month, Brighton just reached this limit on the 29th and St. Leonards 51° on the 25th. The nights during this period were relatively milder than the days, many of the minima being above 40°. Thunderstorms were almost entirely absent.

Aurora was witnessed at Isleworth on the 2nd, at Castlebay on the 11th, at Nairn, Gordon Castle, Cromer and Cahir on the 19th, and at Dublin on the 20th.

Fog was fairly frequent inland, intense darkness prevailing in London on the 3rd, at Tottenham on the 22nd, and at Ampleforth from 2 p.m. to 2·45 p.m. on the 30th. Between the 20th and 30th there was much fog on the eastern and western coasts, very thick in places on several days, but the south coast was not much affected.

The temperature of the sea water round our shores was nearly everywhere a little lower than in February. Off Eastbourne and Margate the water was  $1^{\circ}$  colder than the air on shore, but in nearly all other localities it was warmer than the air, as much as  $6^{\circ}$  off Plymouth and Shetland.

**Rainfall.**—There was a marked deficiency of precipitation in the north and west of Scotland, and as marked an excess over the rest of the Kingdom. Fort William received only 0·3 in., a loss of 6·4 ins., Oban 0·7 in. and Fort Augustus 0·8 in., a loss of 2·9 ins. There were no other totals of less than an inch. As a rule the records were very large, there being an average excess of about  $1\frac{1}{2}$  in. The largest amounts were 7 ins. at Whitchurch (Devon), 7·4 ins. at Tillypromie, 9·1 ins. at Sheepstor (Devon), and 11·1 ins. at Nuns Cross (Devon). Precipitation was measured on 31 days at Dyce (Aberdeen), on 30 days at Jersey, Guernsey (Brooklyn) and Foynes, and on 20 days and upwards in nearly all localities, but on only 9 days at Fort William and Oban.

**Bright Sunshine.**—Very cloudy, dull weather prevailed in all districts except the north-west of Scotland, resulting in the loss on the average of an hour per day of bright sunshine over the country generally. Aberdeen lost 73 hours, Hastings 59, and Gledston 57 hours. The aggregate ranged from 141 hours (39 per cent. of the possible) at Scilly, 131 hours (36 per cent.) at Penzance, and 127 hours (35 per cent.) at Stornoway to 43 hours (12 per cent.) at Birmingham and Bunhill Row (London City), and 40 hours (11 per cent.) at Whitworth Park, Manchester.

## TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of*  
*W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

## LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
<b>1. LONDON:—</b>		<b>4. ENGLAND, E.:—</b>	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Camden Square ..	H. Robert Mill, LL.D., D.Sc.	Hillington ..	Rev. H. E. B. Folkes, M.A.
Westminster ..	The Meteorological Office.	Norwich ..	A. W. Preston.
Greenwich ..	The Royal Observatory.	(Eaton.)	
Norwood ..	W. Marriott.	Cambridge ..	R. Irwin Lynch, M.A. The Botanic Gardens.
Kew .. ..	The Kew Observatory (National Physical Laboratory).	Clacton-on-Sea ..	A. W. Shadick, for Urban District Council.
<b>2. ENGLAND, CENTRAL:—</b>		Bennington ..	Rev. J. D. Parker, LL.D.
Huddersfield ..	J. Firth.	Berkhamsted ..	E. Mawley.

\* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

## NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of stations are printed. Clarendon, normal climatological stations, 9 a.m. and 9 p.m.; **BLACK CAPITALS**, telegraphic reporting, normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only (Ventnor, 9 a.m. and 6 p.m.). At stations marked \* an additional observation is taken, at 3 p.m. in the case of stations printed in clarendon type, and at 1 p.m. in the case of stations printed in Roman type. These additional observations are used in preparing the wind summaries, and in computing the number of days of overcast or clear sky. At telegraphic reporting stations (black capitals or Roman type), the results given under "hygrometer" and "cloud" are based on the morning observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. only, or 9 a.m. and 9 p.m., or 7 a.m., 1 p.m., 9 p.m., or 7 a.m. and 6 p.m., as the case may be.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the fixed hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed

hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

**Averages.**—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1831-1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

**Royal Observatory, Greenwich.**—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 1, 2, 1, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 2, 3, 0.

**Mean Values for Districts.**—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office

## INDEX OF URBAN DISTRICTS

As existing on 31st March, 1909, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked \* have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,171 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 156 were each co-extensive, at the end of March, 1909, with one or more Registration Areas.

# QUARTERLY RETURN

OF

## MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF

### ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS  
DISEASE IN CERTAIN LARGE TOWNS.

~~~~~  
Published by Authority of the Registrar-General.

No. 242.]      **Marriages**—*January, February, March, 1909.*      [Price 9d.  
                 **Births and Deaths**—*April, May, June, 1909.*

---

*General Register Office, Somerset House,  
26th July, 1909.*

#### UNITED KINGDOM.

The POPULATION of the UNITED KINGDOM in the middle of 1909 is estimated at 45,004,384 persons; that of England and Wales at 35,756,615, that of Scotland at 4,877,648, and that of Ireland at 4,370,121.

In the United Kingdom 298,807 *births* and 163,226 *deaths* were registered in the three months ended 30th June 1909. The natural increase of population was, therefore, 135,581. The number of *persons married* in the quarter ended 31st March 1909 was 117,894.

The birth-rate in the United Kingdom in the *second* quarter of 1909 was 26·6, and the death-rate 14·5, per 1000 of the estimated population. The marriage-rate in the *first* quarter of 1909 was 10·6 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

#### Passenger Movement.

According to a Return issued by the Board of Trade it appears that in the three months ended 30th June 1909, the total passenger movement between the United Kingdom and places outside Europe showed a net balance outward of 40,321 passengers, compared with a net balance inward of 12,219 passengers in the corresponding period of the previous year.

The net balance outward among persons of British origin amounted to 29,968 persons. Of these 16,550 were English, 227 Welsh, 9,383 Scottish, and 9,913 Irish passengers, whilst there was a balance inward of 6,105 British Colonial passengers. Compared with the numbers in the corresponding period of the previous year the net balance outward of English passengers showed an increase of 31 per cent., that of Welsh an increase of 50 per cent., that of Scottish an increase of 84 per cent., and that of Irish an increase of 78 per cent., whilst the net balance inward of British Colonial passengers showed little variation.

Among persons of foreign origin there was a net balance outward of 10,353, against a net balance inward of 29,522 in the corresponding period of the previous year.

#### ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,021 registration sub-districts of England and Wales in the three months ended 30th June 1909; and the MARRIAGES in 15,730 churches or chapels, in 15,336 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ended 31st March, 1909.

#### Marriages.

In the *first* quarter of 1909 the marriages of 90,084 persons were registered, being equal to an annual rate of 10·2 persons married per 1000 of the estimated population; this is 1·1 per 1000 below the mean marriage-rate in the ten preceding first quarters, and is the lowest marriage-rate recorded in any first quarter since the establishment of civil registration.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 7·0 in Northamptonshire, 7·6 in Essex, 7·7 in Buckinghamshire, 8·1 in Middlesex, 8·2 in Bedfordshire and in Worcestershire, and 8·4 in Surrey; the highest rates were 12·0 in Cornwall, 12·2 in Devonshire and in Durham, 12·3 in Northumberland, 12·4 in Carmarthenshire, 12·7 in Cumberland, 12·9 in Glamorganshire, and 13·1 in Monmouthshire.

#### Births.

The births registered in the *second* quarter of 1909 numbered 237,142, and were in the proportion of 26·6 annually per 1000 of the population; this is 1·9 per 1000 below the mean birth-rate in the ten preceding second quarters, and is the lowest birth-rate recorded in any second quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the lowest birth-rates during the quarter were 20·5 in Sussex, 21·9 in Cornwall, 22·0 in Northamptonshire, 22·1 in Kent, in Somersetshire, in Herefordshire, and in Carnarvonshire, 22·5 in Dorsetshire, 22·8 in Devonshire, and 22·9 in Berkshire; the highest rates were 29·5 in Staffordshire, 30·8 in the North Riding of Yorkshire, 31·3 in Northumberland, 31·6 in Nottinghamshire, 33·6 in Carmarthenshire, 35·2 in Durham, 35·8 in Glamorganshire, and 37·6 in Monmouthshire.

In 76 great towns the birth-rate averaged 26·6 per 1000, ranging from 15·9 in Hastings, 17·6 in Halifax, 17·8 in Hornsey, 19·4 in Bournemouth, 20·1 in Handsworth (Staffs.), 20·2 in Bury, and 20·4 in Bradford, to 33·1 in St. Helens, 35·4 in Coventry, 35·6 in Middlesbrough, 35·8 in Tynemouth, 36·1 in Merthyr Tydfil, and 40·9 in Rhondda. In 143 smaller towns the mean birth-rate was 25·7 per 1000, and in the remainder of England and Wales, excluding the 219 chief towns, it was 27·0.

### Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 112,121, against 111,798, 111,198, and 122,563 in the second quarters of 1906, 1907, and 1908 respectively.

### Prices and Pauperism.

The average price of wheat per quarter, which had been 31s. 2d., 31s. 8d., and 33s. 11d., respectively in the preceding three quarters, was 41s. 1d. last quarter. The average wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4d.; of prime beef, 7 $\frac{3}{4}$ d.; of inferior mutton, 4 $\frac{1}{2}$ d.; of prime mutton, 7 $\frac{1}{2}$ d. Compared with the average prices in the preceding three months, the price of inferior beef showed a decrease of 1 $\frac{3}{4}$ d., and that of prime beef a decrease of  $\frac{2}{3}$ d. The price of inferior mutton showed an increase of  $\frac{3}{8}$ d., and that of prime mutton a decrease of  $\frac{1}{8}$ d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 16s. 8d. per ton, against 17s. 2d. per ton in the second quarter of 1908. The average price of Consols was 84l. 16s. 11d., having been 83l. 17s. 8d. in the preceding quarter. The minimum annual rate per cent. of discount charged at the Bank of England, which had been raised on the 14th January, 1909, to 3l., was reduced on 1st April to 2l. 10s., and remained unchanged during the quarter.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 799,428 exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 799,428 persons, 268,607 received in-door, and 530,821 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·4 per 1000, against 21·9 and 22·2 per 1000 respectively in the second quarters of 1907 and 1908.

### Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72–91.

An exceptionally fine spell at the commencement of the quarter was followed by a long run of typical April weather, frequent falls of rain being interspersed with substantial intervals of bright sunshine. May was, upon the whole, an exceedingly fine month especially in the south of England, where the amount of bright sunshine was the largest on record. Towards the middle of the period, however, the touch of cold which is so common a feature of that season of the year duly made its appearance, a brisk Northerly wind being accompanied on the 13th and 14th by snow showers in many parts of the country. June proved exceedingly dull and unseasonable, especially in the south-eastern quarter of England, where cloud was very prevalent and rainfall unduly heavy. It is singular to notice that in London and some other portions of our southern and south-eastern counties the sunniest May was followed by the cloudiest June on record since 1881, when the automatic registration of bright sunshine became general.

Early in April an exceeding heavy fall of rain was experienced in Ireland and the west of Scotland, but over England the weather of

the first ten to twelve days was brilliantly fine, with fairly high day temperatures, but with cold nights and sharp frosts in many localities between the 5th and 8th. After about the 12th the weather became generally unsettled, with frequent falls of rain, and occasional thunderstorms in most districts. With the wind mainly from South-West or West the thermometer was usually above its average level, but at the close of the month, when a shift to North-West and North occurred, the weather became much colder and showers of hail, sleet or snow were experienced in nearly all parts of the country.

May opened with a continuation of the inclement weather noticed at the end of April. An improvement soon, however, took place, and from the 2nd to about the 10th the sky was in most districts quite cloudless, the amount of bright sunshine registered in the week ending the 8th being as large as in any calendar week since the general establishment of recording instruments in 1881. With the wind mainly from some Easterly quarter no very high temperatures were recorded, and after the 10th, when a shift to North was accompanied by a large increase of cloud the weather became exceedingly cold, with showers of snow or sleet in many places. After the middle of the month a change to more genial conditions was observed, and between the 21st and 23rd the air was warmer than at any other time in the quarter, the thermometer in the shade rising to 80° and upwards in many parts of the country, and to 84° at Greenwich, Camden Square, and Maidenhead. In the fourth week the weather became cooler and very unsettled, thunderstorms and heavy rain being experienced in many districts on the 24th and 25th. Quite at the close of the month a rise of temperature occurred, the thermometer at Greenwich attaining on the 31st a maximum of 76°.

June was throughout an exceedingly changeable month, with an undue prevalence of Northerly winds, much cloud, and a striking absence of summer warmth. In the early part of the month the Northerly breezes were accompanied in the south and east of England by persistent rains. After the 5th the weather became fair and dry, but over a large portion of the country the sky was usually cloudy, and on the 16th thunderstorms were experienced locally over our southern counties. The principal rainfall of the month occurred in the fourth week, when a large cyclonic disturbance moved slowly and in an erratic path across the United Kingdom. The winds at the time varied considerably in different localities, but temperature was everywhere low, the thermometer on some days failing to attain a maximum of 60°. Quite at the close of the month the weather began to improve somewhat, especially in the western districts, where the thermometer on the 30th rose to 70° or a trifle above it.

For the quarter, as a whole, the *mean temperature* was slightly above the average. The highest readings were observed, as a rule, between May 21st and 23rd, when the thermometer in the shade rose to 80° and upwards in several parts of England, and to 84° at a few stations in the neighbourhood of London. Throughout the whole of June there was only one record in any part of the Kingdom of a temperature exceeding 75°; at Maidenhead on the 17th the thermometer rose to 76°. At Westminster the highest reading for the month (only 71°) was lower than in any June since the year 1879. The lowest temperatures were recorded at various times in the early part of April, when the thermometer in the screen fell below 25° in many parts of the Kingdom. At English and Welsh stations the lowest values reported were 20° at Wokingham, on the 2nd, and at Garforth on the 7th, and 22° at Llangammarch Wells on the 10th; at the last mentioned station the exposed thermometer sank to 9°.

Sharp night frosts were also experienced at the beginning of May and about the middle of the same month, and slight ground frosts between the 3rd and 7th, and the 10th and 12th of June.

The *rainfall* of the quarter was in excess of the average in all districts excepting the English Channel. Over the country generally the excess was small, but in London it amounted to 29 per cent.; and over the south-eastern districts as a whole to 31 per cent. The number of rain days agreed, as a rule, very closely with the normal, but in the English Channel district it was small—only 31 as against an average of 43. The largest individual falls of anything like a general character occurred on May 24th or 25th, when several parts of England were affected, on June 1st our South and East counties, on June 3rd in Devonshire, Cornwall, and the Channel Islands, and between June 21st and 26th, when the whole country experienced daily amounts varying between one-half and three-quarters of an inch, and some localities more than an inch.

*Bright sunshine.*—Owing to the unusual brilliance of April and May the total duration of sunshine for the quarter was everywhere in excess of the average. In England north-east the difference was slight, but in all other districts it was considerable, the excess amounting to 16 per cent. in the English Channel district, to 21 per cent. in England south-east, and to as much as 28 per cent. in London. The weeks ending respectively with April 10th and May 8th were two of the finest ever experienced in this country. In each case the duration at several places in the south and east of England was equal to more than 90 per cent. of the time the sun was above the horizon.

### Deaths.

The deaths registered in England and Wales last quarter numbered 125,021, and were in the proportion of 14·0 annually per 1000 persons living; this rate is 1·3 per 1000 below the mean rate in the ten preceding second quarters. In registration counties with populations exceeding 100,000, the death-rates ranged from 11·1 in Middlesex, 11·5 in Essex, 11·7 in Leicestershire, 11·9 in Kent and in Northamptonshire, and 12·5 in Surrey and in Wiltshire, to 15·1 in Glamorganshire, 15·2 in Cumberland, 15·6 in Northumberland, 15·7 in Durham, 15·8 in Carmarthenshire, 16·5 in Lancashire, and 16·6 in the North Riding of Yorkshire.

The 125,021 registered deaths included 64,855 of males and 60,166 of females, the death-rate among males being 15·1, and that among females 13·1, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding second quarters, the death-rate of males showed a decrease of 1·4, and that of females a decrease of 1·1. Out of equal numbers living, the deaths of males were to those of females as 115 is to 100; the mean proportion in the second quarters of the ten preceding years having been 116 to 100.

### Urban and Rural Mortality.

In 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1909 is estimated at about sixteen and a half millions, the death-rate calculated without reference to sex and age constitution of the populations was 13·9 per 1000 living; the rates in the three preceding second quarters having been 14·8, 14·9 and 13·7. The crude rates in the several towns ranged from 8·1 in Hornsey, 9·2 in Kings Norton, 9·3 in Leyton and in Handsworth (Staffs.), 9·5 in East Ham, and 9·7 in Walthamstow, to 18·0 in Coventry and in

Liverpool, 18·1 in St. Helens, 18·4 in Salford, 18·5 in Wigan, 18·6 in Wolverhampton, 19·7 in Oldham, and 20·0 in Middlesbrough.

In 143 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at over five millions, the crude death-rate was 13·3 per 1000 living; the rates in the three preceding second quarters having been 13·4, 14·0, and 12·9.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns and more than seven and a half millions in rural districts, the crude death-rate was 14·5 per 1000 living; the rates in the three preceding second quarters having been 14·6, 14·5, and 14·1.

The crude death-rate, that is the proportion of deaths from all causes to each thousand of the population, is a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the sex and age constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xv.)

*June Quarter, 1909.*

— — — — —					Crude Death-rates.	Corrected Death-rates.
England and Wales	...	...	...	...	14·0	14·0
76 Great Towns	...	...	...	...	13·9	14·7
143 Smaller Towns	...	...	...	...	13·3	13·9
England and Wales, less the 219 Towns					14·5	13·6

It should further be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public institutions the death-rate in the rural area may possibly be somewhat overstated.

*Watering Places and Summer Resorts.*

The deaths registered last quarter from all causes, and from each of the more important epidemic diseases, in those urban districts which are most nearly co-terminous with our chief watering places, are shown in Table XIII. For purposes of comparison the populations at the census of 1901 are also shown.

*Mortality at Different Ages.*

Of the 125,021 deaths registered last quarter, 22,579 were those of infants under one year of age, 58,459 those of persons aged between one year and sixty years, and 43,983 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 95 per 1000; this proportion was 17 per 1000 below the average in the ten preceding second quarters, and was the lowest rate recorded in any quarter since the establishment of civil registration. Among registration counties with populations exceeding 100,000, the lowest proportions were 67 in Sussex, 68 in Wiltshire, 71 in Kent, in Berkshire, in Middlesex, and in Dorsetshire, and 72 in Hertfordshire. The highest proportions were 104 in Nottinghamshire, 106 in Durham, 107 in the North Riding of Yorkshire and in Carmarthenshire, 108 in Lincolnshire, 114 in Staffordshire, and 119 in Lancashire.

In the 76 great towns infantile mortality averaged 101 per 1000 births, being 6 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 50 in Hornsey, 55 in Hastings, 59 in Kings Norton and in York, 67 in Brighton, and 68 in Leyton and in Devonport; the highest were 130 in Warrington, 132 in Wolverhampton, 134 in St. Helens, 144 in Wigan, and 151 in Preston and in Middlesbrough. Among the 143 smaller towns infantile mortality averaged 94 per 1000 births, ranging from 18 in Salisbury, 33 in Guildford, 35 in Winchester, 39 in Worthing, 42 in Richmond, and 45 in Edmonton, to 170 in Hyde, 173 in Burslem, 177 in Tunstall, 185 in Darwen, 229 in Farnworth, and 238 in Ince in Makerfield. Excluding these 219 towns, infantile mortality in the remainder of England and Wales was in the proportion of 89 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 7·3 per 1000 of the estimated population at this group of ages, being 0·7 below the mean rate in the ten preceding second quarters. In the 76 great towns the mean mortality at this age-group was 7·7 per 1000, ranging from 3·7 in Hornsey, 4·6 in Handsworth (Staffs.), 4·7 in Croydon, and 4·9 in Tottenham, in Hastings, and in Devonport, to 11·2 in St. Helens, 11·6 in Wolverhampton and in Wigan, 11·8 in Salford, 12·0 in Middlesbrough, 12·2 in Oldham, and 12·3 in Warrington. In the 143 smaller towns the mortality at this age-group averaged 6·9 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 66·6 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding second quarters having been 66·2. In the 76 great towns the mean mortality at this age-group was 67·0 per 1000; the lowest rates were 43·9 in Kings Norton, 47·7 in West Bromwich, 48·5 in Leyton, and 49·7 in Reading; the highest rates were 82·5 in Birkenhead, 84·0 in Bury, 86·0 in Preston, 86·4 in Rhondda, and 91·2 in Oldham. In the 143 smaller towns the rate averaged 67·8 per 1000.

Compared with the mean rates in the ten preceding second quarters, the mortality of infants under one year of age showed a decrease of 15·2 per cent., that of persons between one year and sixty years of age a decrease of 8·8 per cent., and that of persons aged sixty years and upwards an increase of 0·6 per cent.

#### *Mortality from certain Epidemic Diseases.*

The 125,021 deaths from all causes include—

4,055	that were attributed to measles,
2,130	whooping-cough,
1,081	diphtheria,
984	diarrhœa,
871	scarlet fever,
432	"fever,"
6	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate 9,559 deaths were referred last quarter, being in the proportion of 1·07 per 1000 of the estimated population, or 0·20 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rate of mortality from measles exceeded the decennial average, while the rates from each of the other diseases were below the respective averages.

*Measles* was returned as the cause of 4,055 deaths last quarter, corresponding to an annual rate of 0·45 per 1000 of the population,

or 0·06 per 1000 above the average in the second quarters of the preceding ten years. Of the 55 registration counties, eleven were free from measles fatality, and the death-rate did not exceed 0·03 per 1000 either in Sussex, Oxfordshire, Cambridgeshire, Dorsetshire, or Lincolnshire. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·63 in Nottinghamshire, 0·67 in Bedfordshire, 0·69 in London, 0·75 in Worcestershire, 0·82 in Warwickshire, 0·83 in Lancashire, and 0·90 in Staffordshire. In the 76 great towns measles caused an average mortality of 0·64 per 1000. In nine of these towns no deaths from this disease were registered, and the death-rate did not exceed 0·03 per 1000 in Brighton. The highest death-rates were 1·84 in Salford, 1·98 in St. Helens, 2·08 in Bootle, 2·16 in Norwich, 2·30 in Wigan, and 3·76 in Wolverhampton. In the 143 smaller towns, measles was fatal on the average to 0·45 annually per 1000 living, and among these towns showed exceptional fatality in Rowley Regis, Hartlepool, Longton, Dudley, Ince in Makerfield, and Kidderminster. In the remainder of England and Wales the average measles death-rate was 0·24 per 1000. Among registration sub-districts outside the 219 chief towns, measles was especially fatal in Darlaston, Anston, Hucknall Torkard, Ashton in Makerfield, and Bradfield.

*Whooping-cough* accounted last quarter for 2130 deaths, and for a death-rate of 0·24 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·11 per 1000. In six of the counties no deaths from whooping-cough were registered last quarter, and the death rate did not exceed 0·02 per 1000 either in Buckinghamshire, Oxfordshire, Suffolk, or Dorsetshire. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·33 in Northumberland, 0·35 in London, 0·37 in Middlesex, 0·38 in Glamorganshire, 0·41 in Essex, 0·46 in Staffordshire, and 0·73 in the North Riding of Yorkshire. In the 76 great towns whooping-cough caused an average death-rate of 0·29 per 1000 living. No deaths from this disease occurred in eleven of these towns, and the death-rate did not exceed 0·03 in Birkenhead and in Gateshead; but it was equal to 0·79 in Tynemouth, 0·82 in West Ham, 0·84 in St. Helens, 0·94 in Swansea, 1·02 in Preston, and 1·14 in Middlesbrough. In the 143 smaller towns the average death-rate from whooping-cough was 0·19 per 1000, the disease being especially fatal in Pontypridd, Tunstall, Coseley, Stafford, and Wallsend. In the remainder of England and Wales whooping-cough caused an average mortality of 0·19 per 1000 annually. Among registration sub-districts outside the 219 chief towns, whooping-cough was exceptionally fatal in Bognor, Bobbingworth, Tadcaster, and Reeth.

*Diphtheria* (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1,081 deaths, a number corresponding to an annual rate of 0·12 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·05 per 1000. In four counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·15 in Lancashire, 0·18 in Denbighshire, 0·19 in Derbyshire, 0·22 in Carmarthenshire, and 0·26 in Hampshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·13 per 1000 of their aggregate population. Seven of these towns were free from diphtheria fatality; and the death-rate did not exceed 0·03 per 1000 in Nottingham and in Gateshead. The highest death-rates were 0·27 in Stockport, 0·28 in Wallasey and in Warring-

ton, 0·35 in Salford and in Rhondda, and 0·49 in Portsmouth. In the 143 smaller towns the mortality from this disease averaged 0·15 per 1000, the rate being highest in Chesterfield, Acton, Ashton under Lyne, Shrewsbury, Burslem, and Rochester. In the remainder of England and Wales, diphtheria was fatal in the average proportion of 0·11 per 1000 living. Among registration sub-districts outside the 219 chief towns, diphtheria was especially fatal in Newlyn and in Skelton (North Riding of Yorkshire).

*Diarrhœa* was the assigned cause of 984 deaths last quarter, corresponding to an annual rate of 0·11 per 1000, which is lower by 0·04 per 1000 than the decennial average rate for the second quarter of the year. In five counties no deaths from diarrhœa were registered last quarter. Among counties with populations exceeding 100,000 persons, the highest death-rates were 0·15 in Carmarthenshire, 0·17 in Warwickshire and in Lancashire, 0·18 in Staffordshire, and 0·19 in Glamorganshire. In the 76 great towns the average death-rate from diarrhœa was 0·14 per 1000. Seven of the great towns were free from diarrhœa fatality; the highest death-rates were 0·35 in Hanley, 0·38 in Great Yarmouth, in Burnley and in Middlesbrough, 0·40 in Walsall, and 0·42 in Aston Manor. In the 143 smaller towns diarrhœa was fatal on the average to 0·10 per 1000 of the population, and caused the highest mortality in Barnsley, Leigh (Lancs.), Tipton, and Longton. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·08 per 1000.

*Scarlet fever* accounted last quarter for the deaths of 871 persons, equal to a rate of 0·10 per 1000 living, or 0·01 per 1000 less than the decennial average rate for the second quarter. Nine of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·14 in Shropshire and in Carnarvonshire, 0·20 in Cheshire, 0·22 in Lancashire, and 0·33 in Dorsetshire. In the 76 great towns scarlet fever accounted for an average mortality of 0·12 per 1000 annually. No deaths from this disease were recorded in fourteen of these towns, and the death-rate did not exceed 0·02 per 1000 in Leeds. The highest scarlet fever death-rates were 0·32 in Liverpool, 0·34 in St. Helens, 0·39 in Warrington, 0·41 in Blackburn, 0·46 in Salford, and 0·57 in Wallasey. In the 143 smaller towns scarlet fever was fatal in the average proportion of 0·10 per 1000 living, and caused the highest mortality in Chester, Swinton & Pendlebury, Hendon, Wednesbury, and Lancaster. In the remainder of England and Wales this disease caused an average death-rate of 0·07 per 1000 living. Among registration sub-districts outside the 219 chief towns scarlet fever was exceptionally fatal in Ramsey, Portland, and Tenby.

*"Fever"* (including the three chief forms—*typhus*, *enteric fever*, and *"pyrexia"* of uncertain origin) was the registered cause of 432 deaths last quarter, equal to an annual death-rate of 0·05 per 1000 of the population, or 0·03 per 1000 less than the average in the second quarters of the previous ten years. In eleven counties no deaths from fever were returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·08 in Derbyshire, in Lancashire and in Durham, 0·09 in the West Riding of Yorkshire and in Carmarthenshire, 0·11 in the North Riding of Yorkshire, and 0·19 in Carnarvonshire. In the 76 great towns fever caused an average mortality of 0·05 per 1000 annually. In twenty-

three of these great towns no deaths from fever occurred and the death-rate did not exceed 0·01 per 1000 in West Ham, in Bristol and in Birmingham; the towns with the highest fever death-rates were Bolton, where the rate was 0·13 per 1000, Warrington 0·17, Huddersfield 0·21, Southampton and Middlesbrough 0·23, and Hanley 0·35. In the 143 smaller towns fever caused an average mortality of 0·05 per 1000 annually, the rate being highest in Ashton under Lyne, Barnsley, Chorley, and Fenton. In the remainder of England and Wales the death-rate from fever averaged 0·05 per 1000. Among registration sub-districts outside the 219 chief towns fever was especially fatal in Kirkham, Conway, and Pontefract.

Six deaths from *small-pox* were registered last quarter : the deaths in the four quarters immediately preceding numbered 9, 3, 0, and 8, respectively. Of the 6 deaths from small-pox registered last quarter, 2 belonged to the City of Bristol.

### *Violent Deaths.*

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,671 last quarter, and corresponded to an annual rate of 0·52 per 1000 of the population, which is 0·06 per 1000 below the average in the ten preceding second quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·28 in Hertfordshire, 0·30 in Bedfordshire, in Somersetshire and in Shropshire, 0·34 in Norfolk, and 0·35 in Denbighshire; the highest rates were 0·60 in Lancashire, 0·69 in Monmouthshire, 0·80 in Glamorganshire, and 1·03 in Durham. In the 76 great towns the mean rate was 0·49 per 1000 living; among the several towns the rate was only 0·09 in Aston Manor, 0·11 in Handsworth (Staffs.), 0·18 in Halifax, and 0·22 in Grimsby; but it rose to 0·80 in St. Helens, 0·82 in Manchester, 0·93 in Tynemouth, 0·94 in Rhondda, and 1·16 in Birkenhead.

### *Certification of Causes of Death.*

Of the 125,021 deaths registered in England and Wales last quarter, the causes of 114,814, or 91·8 per cent., were certified by registered medical practitioners, and the causes of 8,569, or 6·9 per cent., by coroners, after inquest; whilst the causes of the remaining 1,638, or 1·3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding second quarters having been 1·6. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Sussex, Hampshire, Middlesex, Cambridgeshire, Wiltshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Cheshire, and in the West and East Ridings of Yorkshire, as well as in Glamorganshire, but it reached 2·5 in Northamptonshire, 2·7 in Warwickshire, 3·1 in Shropshire, and 3·5 in Durham. In the 76 great towns the mean proportion of uncertified deaths was 0·8 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, Leyton, Walthamstow, Brighton, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, Wigan, Oldham, Leeds, West Hartlepool, Newcastle on Tyne, Newport (Mon.) or in Cardiff, the proportion per cent. rose to 3·5 in Birmingham, 3·7 in St. Helens, 3·8 in South Shields, 4·4 in Warrington, 4·9 in Handsworth (Staffs.), and 7·0 in Gateshead.

*Inquests.*

Inquests were held in England and Wales concerning 8,569, or 6·9 per cent., of the total deaths, the mean proportion in the ten preceding second quarters having been 6·8 per cent. In the 76 great towns the proportion of inquest cases averaged 7·6 per cent., ranging from 2·0 in Barrow in Furness, 3·0 in Gateshead, 3·1 in Handsworth (Staffs.) and in Warrington, and 3·9 in Preston, to 10·4 in Southampton, 10·6 in Croydon and in Birkenhead, 10·9 in Cardiff, and 11·1 in Derby and in Hull.

*Deaths in Public Institutions.*

The total deaths registered in England and Wales include 25,459, or 20·4 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding second quarters having been 17·3 per cent. In the 76 great towns the deaths in public institutions averaged 27·6 per cent. of the total deaths, the lowest percentages in the several towns being 3·9 in Rhondda, 4·9 in Handsworth (Staffs.), 7·2 in Devonport, and 8·0 in Smethwick; the highest percentages were 30·2 in Manchester, 30·9 in Walthamstow, 32·0 in Leyton, 36·7 in Liverpool, and 42·0 in London.

## EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows :—

	Birth-rate.	Death-rate.
Edinburgh ... ..	22·8	15·8
Glasgow ... ..	28·5	16·6
Dublin ... ..	30·2	20·9
Belfast ... ..	29·9	19·4

## COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 28 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 3rd July, 1909 (Table XIV.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the second quarter of 1909 were as follows :—

## BIRTH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Trieste ... ..	31·4	Brussels ... ..	17·0
Bucarest ... ..	30·3	Paris ... ..	18·1
Breslau ... ..	29·5	Antwerp ... ..	18·7
Budapest ... ..	27·0	Berlin ... ..	21·2
Copenhagen ... ..	26·5	Prague ... ..	21·7
St. Petersburg ... ..	26·2	Vienna ... ..	22·1
London ... 24·9			

## DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living.
Moscow ... ..	27·4	Antwerp ... ..	11·7
Bucarest ... ..	26·6	Brussels ... ..	12·9
St. Petersburg ... ..	26·3	Christiania ... ..	13·9
Trieste ... ..	22·3	Chicago ... ..	13·9
Prague ... ..	22·2	Amsterdam ... ..	14·8
Rio de Janeiro ... ..	20·9	Hamburg ... ..	15·3
London ... 12·8			

*Small-pox* caused 137 deaths in Moscow, 52 in St. Petersburg, 47 in Rio de Janeiro, and 1 in Brussels.

*Asiatic Cholera* caused 414 deaths in St. Petersburg.

*Measles* was most fatal, in proportion to population, in Moscow, St. Petersburg, and Trieste; *scarlet fever* in Moscow, St. Petersburg, and Prague; *diphtheria* in Moscow, New York, St. Petersburg, and Berlin; *whooping-cough* in Christiania, Amsterdam, and Copenhagen; "*fever*" in Moscow, St. Petersburg, New Orleans, and Venice; and *diarrhæal diseases* in Moscow, St. Petersburg, Venice, Bucarest, Breslau, Munich, and New Orleans.

*Infantile Mortality*.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 87 in Christiania, 93 in Paris, 96 in Stockholm, 97 in Amsterdam, and 98 in Brussels, to 173 in Vienna, 176 in Prague, 179 in Breslau, 202 in Munich, and 220 in Bucarest. In London the proportion was 92 per 1000 births.

INDIAN CITIES.—The death-rate was equal to 41·8 per 1000 in Bombay, 36·4 in Madras, and 29·3 in Calcutta. *Small-pox* caused 852 deaths in Calcutta, 186 in Bombay, and 31 in Madras; *measles* caused 53 deaths in Madras, 34 in Bombay, and 9 in Calcutta. Under the heading "*fever*" 3,732 deaths were returned in Bombay, 2,302 in Calcutta, and 1,471 in Madras, including 3,027 deaths from *plague* in Bombay, and 1,323 in Calcutta. The mortality from *diarrhæal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 903 deaths in Calcutta, 280 in Bombay, and 3 in Madras.

---

#### RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 3rd July, 1909 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.—76 Great Towns. - Population: Births, Deaths, and Meteorology in the 13 Weeks ended 3rd July, 1909.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

TOWNS.		The DEATHS registered include																			MEAN TEMPERATURE (Degrees Fahrenheit). RAIN-FALL (Inches). TOWNS.					
		BIRTHS.		DEATHS.		Deaths of Infants under 1 Year of Age.		Persons aged 60 Years and upwards.		Deaths from								Inquest Cases.					Deaths in Public Institutions.		Uncertified Causes of Death.

<sup>a</sup> Phoenix Park.

<sup>b</sup> Fitzwilliam Square.

NOTE.—The 10 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The death-rate in London has been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The death-rates in the other towns have been corrected for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

<sup>a</sup> The Registration Sub-districts (2021 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

## APRIL, 1909.

**Pressure, Winds and Weather.**—After the very striking reversal in the distribution of atmospheric pressure which formed an almost constant feature of March, the conditions last month assumed a more normal character. The means of the barometric readings show that over the British Isles generally the values differed only slightly from the average, being in excess to the extent of 0·12 in. at Jersey, and in defect by 0·07 in. at Blacksod Point, the divergence in most cases not amounting to 0·05 in. From a mean of 30·04 ins. at Jersey the results diminished to 29·81 ins. at Blacksod Point, the diminution continuing over the ocean to slightly below 29·7 ins at Reykjavik, in the south-west of Iceland. The extreme range of pressure was moderate to slight, less than 0·8 in. at Jersey, between that and an inch from the Thames Valley southward, and amounting to or slightly exceeding 1·5 in. in the north-west of Ireland. In close agreement with the general pressure distribution the winds were in most parts of the country from between South and West, but with a fair proportion from South-East or East in several localities. As may be inferred from the slight gradient and the absence of any great range of pressure the month as a whole was of a quiet character; the wind exceeding the force of a strong breeze on various days, but seldom reaching the force of a gale.

The morning of April 1st witnessed a sudden change in the type of weather. The last of the long series of depressions of the previous month was passing away eastward across the Netherlands and Germany, and a well-marked anticyclone was spreading down from beyond the Arctic Circle. For ten days this high pressure system was the dominating factor over Western Europe; its central space at first covered Britain, then drifted slowly eastward as far as the Baltic, and afterwards returned to this country. On the 2nd the barometer stood above 30·5 ins. in most parts of the Kingdom, 30·56 ins. at Dover being the highest record for the month. On the return of the system readings of about 30·5 ins. were again registered in several localities. The eastward transference of this high pressure in the first part of the period was associated with a corresponding eastward expansion of an extensive disturbance, which wireless reports from steamers showed occupying the greater portion of the northern half of the Atlantic. While, therefore, England and Eastern Scotland were wholly within the influence of the high pressure area, the more western parts of the Kingdom, although the barometer was also high there, were affected by the ocean depression. At the west coast stations strong to high southerly winds were experienced during the first five days, attaining gale force in places, a strong gale at Roche's Point on the 2nd. Extremely unsettled weather also ruled in those regions, falls of more than an inch of rain in a day occurring in Ireland and Western Scotland:—on the 2nd, 1·5 in. at Ballinacurra, 1·6 in. at Hurdlestown and Waterford and 2 ins. at Newmarket-on-Fergus; on the 3rd 1·6 in

at Ballinacurra, Roche's Point and Rothesay, and 1·9 in. at Killybegs (Donegal); and on the 4th, 1·5 in. at Gruline (Mull). Subsequently these districts were favoured with the exceptionally brilliant weather which had set in over the eastern parts of the Kingdom at the commencement of the month. At a very large number of stations in England, Wales and Eastern Scotland no rain was measured during the first ten to twelve days, and the sky generally was cloudless. During the week ending on the 10th many neighbourhoods in the south and east of England had more than 80 hours of sunshine, up to 85 hours at Lowestoft. At Felixstowe, Greenwich, Worthing, Tunbridge Wells, Hastings, Yarmouth and Lowestoft the week's record was 93 per cent. of the time the sun was above the horizon.

In the Monthly Summary for March, 1907, p. xxiii, special direction was directed to "Cloudless Weather and Coast and Inland Temperatures." The period now under notice provided numerous instances of the same nature, the daily range of temperature on the coast being very much smaller than it was inland. Thus, on April 10th, Llangammarch Wells had a range of 47°, Marlborough 44°, and Shrewsbury 43°, against 19° at Felixstowe, 18° at Margate and Douglas, 15° at Falmouth and Sandown, 14° at Bexhill-on-Sea, and 13° at Aberystwyth. It was during this very fine spell that the highest and the lowest temperatures of the month were registered, maxima of 70° and upwards occurring in several localities. On the 10th, the temperature at Hereford and Shrewsbury rose to 73°, and at Cullompton and Maidenhead to 74°. In Ireland 72° was reached at Killarney on the 9th; and in Scotland 69° at Crieff and Dumfries on the 8th. Night minima below the freezing point in the shade were experienced in numerous neighbourhoods, below 25° in several instances—on the 2nd, 22° at Newton Rigg, Cally, West Linton and Fort William, 21° at Balmoral, and 20° at Wokingham and Fort Augustus; on the 6th, 18° at Balmoral; and on the 10th, 22° at Llangammarch Wells.

After the 7th the anti-cyclone diminished in intensity, and by the evening of the 10th it was withdrawing across the Bay of Biscay. Concurrently, the depression situated far out on the Atlantic moved north-eastward towards Iceland, then eastward to Shetland by the morning of the 12th. The distribution of pressure over these islands underwent a complete alteration, and for the rest of the month cyclonic conditions prevailed. From Shetland the disturbance already referred to passed across Denmark to North Germany and Russia. It was followed immediately by another which appeared off the South of Iceland on the morning of the 12th. Over Britain these systems produced the lowest barometer readings of the month, 29·19 ins. at Stornoway on the evening of the 12th. From the 14th to the 20th, a large system of low pressure occupied the ocean beyond our western coasts. On the 21st it advanced towards Ireland, where on the following day the barometer fell rapidly, until at 4 p.m. on the 22nd it touched 28·8 ins. at Blacksod Point. The system then withdrew to the Atlantic, to about 53°N., 25°W., on the morning of the 24th. From this position it advanced slowly towards the south-west of Ireland, and between the 26th and 28th, it moved north-eastward across Ireland and Scotland to Southern Norway. Smaller secondary disturbances visited the country on the 24th, 28th and 29th. During this disturbed period of nearly three weeks strong or high winds were felt on most days. On the 13th, Stornoway had a westerly gale; on the 21st, Roche's Point a strong southerly gale, with gusts attaining a velocity up to 66 miles per hour; on the 22nd, Blacksod Point a south-westerly gale, Holyhead and Pendennis and Roche's Point a southerly gale; and on the 23rd, Malin Head a south-easterly gale. The weather throughout this period was of a typical April character in all parts of the Kingdom, with bright sunshine more than usually abundant, and yet rain was of almost daily occurrence, mostly in gentle showers, but on the 15th, an inch was measured at Ballinacurra; on the 22nd, 1·3 in. at Abersychan (Monmouth), and 1·1 in. at Sheepstor (Dartmoor); on the 23rd, an inch at Abersychan; and next day an inch at Uldale (Cumberland). In the closing days hail, and on the 30th, sleet and snow fell in many districts. Mildness prevailed during the first fortnight of this broken weather, with no great variations of temperature, but the last week was distinctly colder, and on the 30th, the maximum was below 50° over a large extent of country, violent fluctuations of as much as 10° or 12° occurring with some of the snow squalls. Thunderstorms were experienced at one or other of our stations on nearly every day in some parts of the country, but with the exception of Norwich on the 27th, and Newquay on the 29th, they were not noted as of any great severity.

Aurora was observed at Deerness on the 11th, and at Gordon Castle on the 16th.

There was a good deal of fog reported on the western and eastern coasts from the 7th to the 10th, and on the English Channel from the 14th to the 19th; at times it was rather thick.

On all coasts there was a general increase in the temperature of the sea water since March, the greatest being along the coast of Sussex and Kent. Off the west of Ireland and the north-east of Scotland the water was slightly warmer than the air on shore, but in nearly all other localities it was colder, by as much as 4° or 5° along the east of England.

**Rainfall.**—In many parts of eastern, central and southern England, and at some places in the north of Scotland, the total rainfall for the month was slightly below the average. In all other districts an excess was reported, and in parts of Ireland and the west of Scotland affected by the heavy downpour of the first 5 days the excess was large, the aggregate being in many places more than twice as much as the normal. At Dublin (City) so large an April rainfall had not been recorded since the year 1877. Our map shows the heaviest rainfall—over 8 ins.—in two small areas situated in the south-west of Ireland and the central part of North Wales respectively. The largest total shown in the tables is 6·6 ins. at Ballinacurra. In many parts of eastern, central and southern England less than an inch and a half was collected, the smallest amounts being 0·9 in. at Cromer and Jersey and 1·0 in. at Brighton. Ireland and the west and north of Scotland experienced a measureable quantity of precipitation on 20 or more days, and Foynes and Roche's Point on as many as 27 days, the number decreasing to 15 or less in the drier portions of England generally, to 10 at Rauceby, Lincoln, and Cambridge, and to 9 at Raunds.

**Bright Sunshine.**—Over the country generally the aggregate duration was in excess of the normal, the finest weather occurring in the east and south-east of England, where the total amounted in many places to more than 60 per cent. of the possible duration. In London (at Westminster), the total of 220 hours was as many as 107 above the average, and was 13 hours in excess of anything registered in April since the recording instrument was installed in 1883. In Scotland and in some portions of the south-west of England the amount agreed very closely with the normal.

## MAY, 1909.

**Pressure, Winds and Weather.**—The general distribution of atmospheric pressure during the period under review was mainly of an anticyclonic type. Through the first half of May the high pressure system ruled almost exclusively over the British Isles, but the position of its central space changed about very considerably, its wanderings forming, roughly, a circular path. At the beginning of the month it was on the Atlantic, immediately to the westward of Ireland, but in the course of about nine days it was transferred to the Bay of Biscay, thence across to the Baltic, to Scandinavia, and then westward to Iceland. Here it divided into two parts, one remaining practically stationary, the other, moving to the British Isles, the Bay of Biscay, and later, back to the Atlantic beyond our western coasts by the middle of the month. Throughout this fortnight the barometer descended below 30 ins. only at some of the south and south-west coast stations, associated with the very slow progress of a disturbance which according to wireless reports from steamers made its appearance on the evening of the 3rd in about 53° N., 32° W. From this position it advanced along a south-easterly course to the northern part of Spain by the 9th, then passed to the western Mediterranean and dispersed. On the 17th there was a temporary break in the high pressure conditions, occasioned by the passage of another Atlantic disturbance which had appeared over mid-ocean on the 12th. It subsequently advanced to the southward of the Azores, thence to Portugal, and taking a north-easterly course from the neighbourhood of Lisbon it crossed northern France to Denmark and northern Russia. From the 18th to the 24th the pressure distribution was again anticyclonic over Western Europe generally, and cyclonic out on the Atlantic, but from the 25th to the end of the month the British Isles were visited by a series of disturbances of no great intensity, moving on a general north-easterly path across Ireland and Scotland. On the 3rd the barometer rose to 30·5 ins. at Yarmouth; on the 6th to 30·6 ins. at Aberdeen and in Shetland; on the 13th to nearly 30·5 ins. at Blacksod Point; on the 19th to nearly 30·4 ins. at Yarmouth; and on the 24th it passed above 30·4 ins. at Bath. The disturbances which visited this country were very shallow, the barometer sinking to or below 29·5 ins. in the last week only, below 29·3 ins. over the north-western districts in the afternoon of the 26th, 29·23 ins. at Stornoway being the lowest value reported. The extreme range of pressure for the month was consequently small, from 0·75 in. to an inch in the south and east of England, against 1·2 in. at Stornoway, and 1·3 in. at Aberdeen. For the whole month the mean pressure values were everywhere above the normal, by 0·03 in. at Valencia, and 0·04 in. at Blacksod Point, but by as much as 0·14 in. at Yarmouth. The values indicate the region of lowest pressure to have been on the Atlantic, the barometer averaging slightly above 30 ins. on our western and north-western coasts and in the south of Iceland, while two areas of high pressure were indicated, above 30·1 ins. over northern Iceland and beyond the Arctic Circle, and above 30·15 ins. over the Low Countries. Owing to the ever-changing positions of the various pressure systems the wind was very variable in direction, all quarters of the compass being represented, and an Easterly current was as frequent as a Westerly one. In the absence of any

great disturbances the wind was generally light to moderate in force, but from the 4th to the 8th a high wind from some Easterly direction was felt at various stations on the southern coasts, and on the 7th the pressure anemometer at Plymouth registered gusts in which the velocity was at the rate of 64 miles per hour. From the 9th to the 25th much weaker winds were reported, but from the 26th to the 31st the force of a high wind was again experienced locally, South-Easterly in Shetland, Westerly or South-Westerly in other districts. At Jersey on the 26th, and at Wick on the 30th, the strength of a gale was attained, the only instances during the month at the telegraphic reporting stations.

The very inclement weather which marked the closing days of April was maintained over the country generally on the opening day of May. With the high pressure system off the Irish coast and a depression covering the Baltic region the British Isles were within a broad belt of air coming from the North. Temperature was consequently very low, failing to touch  $50^{\circ}$  over a great part of the country, a number of stations registering maxima as low as  $42^{\circ}$  to  $45^{\circ}$ , and even at several of the southern stations the readings were  $46^{\circ}$  to  $48^{\circ}$ . Accompanying this cold, snow fell pretty generally throughout Britain, nearly all places along the south coast of England and in the Isle of Wight experiencing it. At Llandudno and Raucby thunderstorms occurred. Following immediately upon this polar weather the conditions underwent a remarkable change, the Atlantic anticyclone working round by the Bay of Biscay, and the wind shifting into Southerly directions in all districts. Weather of an exceptionally brilliant character followed. For the week ending with the 8th the sunshine records were above the average at every station in the kingdom, the excess in very numerous instances being at the rate of more than six hours per day, and at Westminster nearly eight hours a day. The total duration for the seven days exceeded 90 hours in many parts of England and Wales, amounting to 93.2 hours at Cardiff and Wisley, 93.3 at Cambridge, 93.5 at Hastings, 94 at Jersey and Southend, 95.7 at Yarmouth, and 95.8 at Worthing. The smallest returns were 50 hours at Valencia, and 49 at Fort Augustus. Here and there slight showers fell, but as a general rule the weather was rainless. However, notwithstanding the fine weather and its unprecedented brightness, the temperature, under the influence of an East wind, did not rise as high as might have been expected. At the beginning of the week the thermometer kept well below the normal, then rose to  $73^{\circ}$  at Cally,  $74^{\circ}$  at Bettws-y-Coed and Dumfries, and  $75^{\circ}$  at Crieff. This warmer interval was maintained into the middle of the following week, the values just quoted being repeated at other stations, while at Killarney  $76^{\circ}$  was reached on the 10th.

During the later half of the second week the pressure distribution was very similar to that noticed at the beginning of the month, an anticyclone on the Atlantic and a depression beyond the North Sea. Winds from the northern regions again invaded the country, and produced another very cold interval. Maximum afternoon temperatures below  $50^{\circ}$  were numerous as far south as the shores of the English Channel,  $42^{\circ}$  at Huddersfield on the 17th, and not higher than  $39^{\circ}$  at Sumburgh Head on the 14th. Sharp night frosts were also registered over a wide area, the thermometer in the screen sinking to  $25^{\circ}$  at Kingston-on-Soar (Notts.) and Mayfield (Staffs.), to  $24^{\circ}$  at Llangammarch Wells, Balmoral, Cally and Pottalloch, and to  $22^{\circ}$  at West Linton. Thermometers freely exposed on the grass fell below  $20^{\circ}$  at several stations, to  $18^{\circ}$  at Thorntonhall,  $17^{\circ}$  at Birmingham,  $14^{\circ}$  at Carlisle, and  $13^{\circ}$  at Llangammarch Wells.

In spite of these wintry conditions, there was a very striking persistency of dry and sunny weather in many parts of the Kingdom. No precipitation was measured during the first twenty-three days at Abergavenny, Bath, Parkstone (Dorset) and Rochford (Worcestershire), and at numerous stations the period was marked by only one or two slight showers, this remark applying to the usually rainy districts in the west as well as to the drier eastern neighbourhoods. Regardless of a settled, or an unsettled, type of weather there was always an abundance of bright sunshine, and near the close of the dry spell there was a sudden increase of warmth, so that between the 21st and 23rd maximum day temperatures of  $80^{\circ}$  and upwards occurred in various parts of England,  $84^{\circ}$  at Maidenhead on the 21st, and at Camden Square and Greenwich on the 22nd.

This was a brief period of heat, for on the 24th disturbances began to move in from the Atlantic, and the weather became much less settled, with frequent rain, and in many places thunder, lightning or both. On the 24th and 25th there were some falls of an inch or more of rain, in the more southern districts on the former date, and in the north of England and south of Scotland on the latter, 1.3 in. at Watergate, Sussex, being the largest quantity in the south, 2 ins. at Crieff in the north. The rainfall of the closing week was consequently above the normal in most localities, and temperature and sunshine below the normal.

Fog was experienced on many parts of the western and south-western coasts from the 10th to the 12th, the 20th to the 24th, and the 30th and 31st dense at times. It

was also rather more frequent in the neighbourhood of Shetland and the Orkneys, but on the east coast of Britain and along the eastern half of the English Channel it was rarely noted.

The temperature of the coastal sea water was everywhere higher than in the preceding month, by as much as  $5^{\circ}$  or  $6^{\circ}$  in some localities, but compared with the temperature of the air on shore the water was a little warmer off the west of Ireland and the north-east of Scotland, cooler in most other districts, by about  $5^{\circ}$  off the north-east of England.

**Rainfall.**—In most parts of Scotland the precipitation was rather above the normal, but elsewhere it was in defect, considerably so in many localities. At a very large number of stations precipitation was measured on less than ten days, at Margate, Dover, Parkstone, Jersey, Braceland (Forest of Dean) and Mallaranny on 5 days, and at Newquay on only 4 days, whereas few had more than 20 days, 22 at Ardross Castle, Kinlochewe and Stornoway, and 23 at Castlebay. In many instances the aggregate totals for the month were less than an inch, about 0.5 in. at Weymouth, in the Forest of Dean, at Shrewsbury and Ruthin, while only a few spots in the mountainous districts of western Scotland and the north-west of England reported more than 6 ins.

**Bright Sunshine.**—With two or three unimportant exceptions the bright sunshine records were above the average, the excess being more than 100 hours at a number of southern stations, 130 hours at Westminster, and 140 at Greenwich. Both Eastbourne and Totland Bay aggregated 351 hours, and Worthing 353 hours, these totals being 74 per cent. of the possible duration. Worthing had 220 hours more than Fort Augustus. At various stations the month's totals were the largest registered in any month since the introduction of sunshine recorders.

## JUNE, 1909.

**Pressure, Winds and Weather.**—Practically throughout the period under notice the distribution of atmospheric pressure over the British Isles and surrounding regions was of an abnormal character, so that the winds and weather differed greatly from the usual experience during the Midsummer month. On the opening day there was a sudden change from the brilliantly fine type of conditions which had been experienced down to the close of May. An extensive system of high barometer readings made its appearance on the eastern side of the Atlantic, from the Azores and Portugal northward to Iceland and Greenland, while an elongated trough of low pressure stretched from Morocco north-eastward across the western countries of the Continent to Scandinavia and Finland. For close upon three weeks the relative distribution of high and low pressure systems did not undergo any very decided modification, the Continental disturbances at times keeping away more to the eastward, and the anticyclone out on the Atlantic at the same time expanding so as to more completely embrace these islands and south-western Europe. It was at nearly the end of this period that the barometer attained its highest level during the month at the home stations, rising above 30.5 ins. in Ireland on the 17th, 30.56 ins. at Valencia, and on the following day mounting to 30.51 ins. at Scilly. The centres of the numerous depressions which appeared within the region under observation during this portion of the month were almost without exception found over the south-western, central, eastern or northern parts of the Continent. On the morning of the 19th the high pressure area was taking up a more southerly position on the ocean, westward from the Bay of Biscay, and there were indications of the existence of a disturbance to the westward or south-westward of Iceland. Wireless reports from steamers beyond the north of Ireland showed that in the evening of the same day the depression was rapidly spreading down upon our north-western coasts. Subsequent reports, however, disclosed a cyclonic system which was extraordinarily slow and erratic in its movements. Its minimum pressure did not reach the neighbourhood of Galway until the evening of the 21st. Growing deeper it passed back to Mayo by next morning, the barometer sinking below 29.5 ins. over the Kingdom generally, and at Blacksod Point it touched 29.18 ins., the lowest reading for the month. Then gradually diminishing in intensity the system wandered on an irregular path to the neighbourhood of Southampton by the morning of the 24th, afterwards passing across south-eastern England to the Wash and the lower part of the North Sea. Returning westward its centre reached the Yorkshire coast on the morning of the 27th, and two days later the disturbance was completely dispersed over the north of Ireland, other shallow depressions then appearing on the Continent, between Spain and Scandinavia.

It will thus be seen that there was no break of any consequence in the area of high pressure occupying the ocean beyond the western coasts. This is reflected in the mean results for the month, which show values as high as 30.28 ins. in the

Azores, and 30·12 ins. in Western Iceland, gradually and fairly uniformly diminishing eastward across the British Isles, to less than 29·9 ins. in the north of Denmark. Over Southern Britain the mean values were all below the average, to the extent of 0·05 in. at London and Dungeness, while over the rest of the Kingdom the figures show an excess of pressure, which at Stornoway amounted to 0·12 in. The distribution of mean pressure consequently showed considerable variation, the isobars being at right angles to the normal, and for the usual South-Westerly to Westerly type a well-defined Northerly type was substituted. But while the wind was almost always from points in the Northern half of the compass, it was generally of little strength, the only instance of a gale experienced at a telegraphic reporting station being on the 4th, from North-East, at Portland Bill. There were only a few other cases in the whole month of the force of a high wind being felt. The self-recording anemometers registered neither gales nor severe squalls.

The weather experienced throughout the country under these unusual conditions was of an exceedingly variable description, and as might be inferred from the pressure distribution it was much more disturbed in the eastern districts than in the western ones. During the first part of the month, until the appearance of the disturbance near Iceland on the 19th, the northern and western portions of the Kingdom were favoured with very dry weather, large numbers of stations returning only a few trifling showers. Ardross, Bray and Newcastle (Wicklow) had 14 consecutive rainless days, Glenarm and Mallaranny 15, Ennistymon 16, and Holyhead 17, while there were several cases of one or two slight showers in the course of 19 days. Over the south-eastern quarter of England, on the other hand, the opening days were extremely unsettled, under the influence of the various shallow disturbances centered about the Bay of Biscay, Northern France and the Low Countries. With the prevailing Northerly breeze thunderstorms were experienced on the 1st at many places in the counties between the Wash and the English Channel, and falls of more than an inch of rain occurred over a still wider area, the largest amounts returned being 1·4 in. at Totland Bay and Berkhamsted, 1·5 in. at Southampton, Reading and Offley, 1·6 in. at Swarraton, and 1·7 in. at Maidenhead. For some days the weather remained in a thundery condition; on the 3rd, Sandgate had 1·1 in. of rain, Falmouth and Plymouth 1·2 in., and Jersey and Guernsey 1·4 in., on the 5th, Mountmellick 1·3 in., and on the 6th, Portsmouth 1·3 in. Later, as the disturbances passed further eastward, and the Atlantic high pressure system took more complete possession of the country, the dry weather in the west and north spread to all districts, so that in many localities in the eastern and south-eastern counties there were from seven to ten days without rain. These periods, however, though very dry were not, as a general rule, attended by fine weather, the polar breezes being accompanied by much cloud and dulness, so that the registered duration of bright sunshine in the majority of districts was well below the normal.

The 19th witnessed the end of the dry weather, and from the 20th to the close of the month the conditions were of a most disturbed character, nearly the entire period being under the influence of the slow moving low pressure system whose progress has been described above. Every day thunderstorms were experienced, and except on the 25th, 26th and 30th they affected extensive regions, in Ireland and Scotland as well as in England. Rain was general, frequently heavy, and in some localities accompanied by hail. At Clifton 1·3 in. was measured on the 20th. On the 21st rainfalls exceeding an inch occurred in various parts of Ireland, 1·5 in. at Blacksod Point, also at Rothesay. Next day the largest falls were all in the north, 1·3 in. at Carlisle, Colmonell, Kilmarnock, Glasgow and Wick, and 1·7 in. at Dumfries. More than an inch fell in the Birmingham district on the 23rd and in Eastern Ireland Bray had 1·2 in., and Kingstown 1·4 in. There were again several large amounts over England on the 24th, ranging up to 1·5 in. at Garforth, and in Ireland Broadford, Clare, had 1·4 in. On the 28th Ruthin had a fall of 1·5 in.

Another very striking feature of the month was its persistent coldness. From beginning to end there was not a day of real summer heat. Afternoon temperatures as high as 70° were uncommonly rare, while there was an unusual frequency of maximum readings below 60°. The warmest days (more local than general) were at the beginning, in the middle, and at the end of the month, 74° at Folkestone on the 1st, at Oundle on the 13th, Dundrum on the 14th, and at Swansea on the 30th; 75° at Bexhill and St. Leonards on the 1st, and Camden Square on the 17th; and 76° at Maidenhead on the 16th. On the other hand between the 4th and 6th, and on some other occasions, there were numbers of maxima of 52° and lower, 50° as far south as Totland Bay, Isle of Wight, on the 4th, the same day that Salisbury had a maximum of 49° only. On the 15th Sumburgh Head did not rise above 48°. Throughout the Kingdom the nights were, relatively, not nearly so cold as the days. The minimum temperatures were nearly always in the forties, but between the 19th and the 22nd they were considerably higher, up to 58° at Dublin, Clacton-on-Sea, Tottenham, and in London, and 59° at Dundrum. At the opposite extreme there were a few instances of frost in the shade, 31° at Burnley, and 30° at Garforth on the 7th; 30° at Llangammarch Wells on the 8th; 31° at Garforth on the 3rd

and 13th; and 29° at Llangammarch Wells on the 14th. Still lower readings were obtained from thermometers freely exposed on the grass, as low as 21° at Llangammarch Wells on the 8th. As a result of these cold conditions the mean temperature of day and night for the month was everywhere below the average, by more than 4° in many localities, and as much as 5·5° at Greenwich and Lincoln.

Fog occurred on the south coast of England, between Dungeness and Portland Bill, only on the 19th; on various sections of the western coasts on the 5th and 6th, 13th to 20th, and 28th to 30th; while on the east coast of Britain it was frequently reported—from the 1st to the 5th, and the 15th to the 29th, but rarely south of the Humber.

The temperature of the sea water round our coasts was everywhere warmer than in May, by 5° or more in several neighbourhoods, 8° off the Isle of Man. Off the east of Ireland, at the western end of the English Channel, and at some places on our north-eastern coasts the water was rather colder than the air on shore, by as much as 4° off Scarborough.

**Rainfall.**—There was a complete reversal of the usual distribution of rain. It was lightest and least frequent over the western and northern districts, heaviest and most frequent over southern and south-eastern England. Roche's Point, Holyhead and several places in Scotland had less than an inch, Southampton, Swarraton, Offley and other neighbourhoods in southern England over 5 ins., and Cockfield, Suffolk, over 6 ins. Several places in the west and north had rain on less than 10 days, on 7 days only at Newcastle (Wicklow), against 20 days at Southampton, Salisbury and Wisley, 21 days at Thetford, and 22 days at Hillington.

**Bright Sunshine.**—With few exceptions the sunshine records were below the average, the loss in many cases being exceptionally large. Edinburgh, with a total of 175 hours, had an excess of 23 hours, and Glasgow, with 177 hours showed a gain of 12 hours, but the largest aggregates, 238 hours at Scilly, 234 hours at Jersey, &c., were a little below the normal, while in numerous instances there was a loss of more than 50 hours, 90 hours at Greenwich, 91 at Kew, 92 at Cirencester, and 100 at Southampton. Several English stations aggregated less than 100 hours for the month, Westminster 91, Birmingham 84, Plumstead 83, and Hull only 79.

# TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of*  
*W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

## LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
<b>1. LONDON:—</b>		<b>4. ENGLAND, E.:—</b>

\* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of stations are printed. Clarendon, normal climatological stations, 9 a.m. and 9 p.m.; **BLACK CAPITALS**, telegraphic reporting, normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only (Ventnor, 9 a.m. and 6 p.m.) At stations marked \* an additional observation is taken, at 3 p.m. in the case of stations printed in clarendon type, and at 1 p.m. in the case of stations printed in Roman type. These additional observations are used in preparing the wind summaries, and in computing the number of days of overcast or clear sky. At telegraphic reporting stations (black capitals or Roman type), the results given under "hygrometer" and "cloud" are based on the morning observations only. At Lincoln the hygrometrical results are based on the 9 a.m. observations only, as also at Wakefield during May and June.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. only, or 9 a.m. and 9 p.m., or 7 a.m., 1 p.m., 9 p.m., or 7 a.m. and 6 p.m., as the case may be.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the fixed hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Month (1-10).	Rain and other forms of Precipitation.				Weather, Number of days of								Wind. No. of observations at 9 a.m. and 9 p.m., or at 7 a.m., 1 p.m., 6 p.m., or 9 p.m.

**Wind Summaries.**—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

**Averages.**—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1881-1905. The values are published in Appendix III, to the Weekly Weather Report of the Meteorological Office for 1906.

**Royal Observatory, Greenwich.**—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 0, 0, 4, the number of persistently cloudless days were 3, 1, 0, the number of persistently foggy days were 0, 0, 0.

**Mean Values for Districts.**—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

# INDEX OF URBAN DISTRICTS.

As existing on 30th June, 1909, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked \* have been created, and the boundaries of those marked have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,173 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 156 were each co-extensive, at the end of June, 1909, with one or more Registration Areas.

QUARTERLY RETURN  
OF  
MARRIAGES, BIRTHS, AND DEATHS  
REGISTERED IN THE DIVISIONS, COUNTIES, DISTRICTS, AND SUB-DISTRICTS OF  
ENGLAND AND WALES;

WITH TABLES SHOWING BIRTHS, DEATHS, AND NOTIFIED CASES OF INFECTIOUS  
DISEASE IN CERTAIN LARGE TOWNS.

Published by Authority of the Registrar-General.

Printed under the Superintendence of His Majesty's Stationery Office,  
AND SOLD BY WYMAN AND SONS, LTD., FETTER LANE, E.C.

---

No. 243.] **Marriages**—*April, May, June, 1909.*  
**Births and Deaths**—*July, August, September, 1909.* [Price 9d.]

---

*General Register Office, Somerset House,  
25th October, 1909.*

**UNITED KINGDOM.**

The POPULATION of the UNITED KINGDOM in the middle of 1909 is estimated at 45,004,384 persons; that of England and Wales at 35,756,615, that of Scotland at 4,877,648, and that of Ireland at 4,370,121.

In the United Kingdom 285,192 *births* and 134,955 *deaths* were registered in the three months ended 30th September 1909. The natural increase of population was, therefore, 150,237. The number of *persons married* in the quarter ended 30th June 1909 was 170,378.

The birth-rate in the United Kingdom in the *third* quarter of 1909 was 25·1, and the death-rate 11·9, per 1000 of the estimated population. The marriage-rate in the *second* quarter of 1909 was 15·2 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

**Passenger Movement.**

According to a Return issued by the Board of Trade it appears that in the three months ended 30th September 1909, the total passenger movement between the United Kingdom and places outside Europe showed a net balance outward of 74,903 passengers, compared with a net balance outward of 39,797 passengers in the corresponding period of the previous year.

The net balance outward among persons of British origin amounted to 49,144 persons. Of these 30,546 were English, 986 Welsh, 11,994 Scottish, and 7,718 Irish passengers, whilst there was a balance inward of 2,100 British Colonial passengers. Compared with the numbers in the corresponding period of the previous year the net balance outward of English passengers showed an increase of 40 per cent., that of Welsh an increase of 80 per cent., that of Scottish an increase of 56 per cent., and that of Irish an increase of 43 per cent., whilst the net balance inward of British Colonial passengers showed a decrease of 34 per cent.

Among persons of foreign origin there was a net balance outward of 25,759, against a net balance outward of 7,527 in the corresponding period of the previous year.

#### ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,019 registration sub-districts of England and Wales in the three months ended 30th September 1909; and the MARRIAGES in 15,745 churches or chapels, in 15,407 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ended 30th June 1909.

#### Marriages.

In the *second* quarter of 1909 the marriages of 143,414 persons were registered, being equal to an annual rate of 16·1 persons married per 1000 of the estimated population, against an average rate of 17·0 per 1,000 in the second quarter of the ten years 1899–1908.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 11·4 in Carnarvonshire, 12·8 in Kent, 13·4 in Surrey, 13·5 in Essex, 13·8 in Hertfordshire, and 13·9 in Norfolk; the highest rates were 17·2 in Oxfordshire and in Derbyshire, 17·3 in the North Riding of Yorkshire, 18·1 in Glamorganshire, 18·2 in Monmouthshire, 18·7 in Nottinghamshire, and 20·4 in Lincolnshire.

#### Births.

The births registered in the *third* quarter of 1909 numbered 228,619, and were in the proportion of 25·4 annually per 1000 of the population; this is 2·5 per 1000 below the mean birth-rate in the ten preceding third quarters, and is the lowest birth-rate recorded in any third quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the lowest birth-rates during the quarter were 19·1 in Sussex, 20·3 Northamptonshire, 20·8 in Herefordshire, 20·9 in Carnarvonshire, 21·0 in Devonshire, 21·3 in Kent, and 21·4 in Dorsetshire; the highest rates were 28·9 in Northumberland, 29·6 in Nottinghamshire, 31·6 in Carmarthenshire, 31·8 in Durham, 34·7 in Glamorganshire, and 35·1 in Monmouthshire.

In the 76 great towns the birth-rate averaged 25·3 per 1000, ranging from 14·7 in Hastings, 15·1 in Hornsey, 16·3 in Halifax, 17·0 in Bournemouth, 18·2 in Bradford, and 18·5 in Northampton, to 32·1 in St. Helens, 32·2 in Newport (Mon.), 32·4 in Warrington, 33·0 in Swansea, 33·8 in Merthyr Tydfil, and 40·6 in Rhondda. In the 143 smaller towns the mean birth-rate was 24·8 per 1000, and in the remainder of England and Wales, excluding the 219 chief towns, it was 25·6.

### Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 123,878, against 105,266, 123,715, and 123,197 in the third quarters of 1906, 1907, and 1908 respectively.

### Prices and Pauperism.

The average price of wheat per quarter, which had been 31s. 8d., 33s. 11d., and 41s. 1d., respectively in the preceding three quarters, was 40s. 3d. last quarter. The average wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 3 $\frac{1}{2}$ d.; of prime beef, 7 $\frac{3}{4}$ d.; of inferior mutton, 4 $\frac{1}{2}$ d.; of prime mutton, 7 $\frac{1}{2}$ d. Compared with the average prices in the preceding three months, the price of inferior beef showed a decrease of  $\frac{2}{3}$ d., and that of prime beef an increase of  $\frac{1}{3}$ d. The price of inferior mutton showed a decrease of  $\frac{3}{4}$ d., and that of prime mutton a decrease of  $\frac{1}{3}$ d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 16s. 7d. per ton, against 16s. 11d. per ton in the third quarter of 1908. The average price of Consols was 84l. 0s. 6d., having been 84l. 16s. 11d. in the preceding quarter. The minimum annual rate per cent. of discount charged by the Bank of England was 2l. 10s., having continued at this figure since 1st April, 1909.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 778,386 exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 778,386 persons, 260,344 received in-door, and 518,042 out-door, relief. The proportion of the population in receipt of poor-law relief was 21·8 per 1000, against 21·5 and 21·9 per 1000 respectively in the third quarters of 1907 and 1908.

### Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 72–91.

The summer months of 1909 included only one substantial spell of fine seasonable weather. Early in August, after a heavy fall of rain in the north and east of England on the 1st, an anticyclone spread over the country from the Atlantic, and for about a fortnight the conditions were generally dry and sunny, with a temperature rising to considerably above its normal level. At no other time during the quarter was the atmosphere in a settled state, the intervals of fine weather being of the briefest possible duration. Temperature seldom rose to beyond the normal, and was often considerably below it, and rain was frequent, most of the heaviest falls occurring over England, and especially in the eastern and southern counties. With the extremely changeable conditions which prevailed the rarity of thunderstorms was somewhat remarkable, few such phenomena being experienced during the two summer months July and August. In September storms were more frequent, and in some parts of England they were of considerable severity. A magnetic storm of great and widespread intensity was

experienced on September 25th, and on the evening of that day an aurora was seen in many parts of the country.

In the earlier half of July the wind blew mainly from points between West and North, and the weather was everywhere cool and showery, with occasional thunderstorms, the latter being accompanied on the 9th, and on the 15th and 16th, by heavy falls of rain in some scattered parts of Wales and the neighbouring English districts. With a brisk Northerly wind which prevailed between the 8th and 11th the thermometer was extremely low, the daily maxima in the north and east of England on the 11th being in many places below 55°. After the 20th of the month the wind blew rather commonly from a South-West quarter, and the weather became somewhat milder, the thermometer on the 17th and 18th rising above 75° at several places in the south-east quarter of England. Rain continued to fall at frequent intervals, and often in considerable quantity, over an inch being recorded in some parts of Scotland and North Wales on the 24th or 25th, and in the south-west of England on the 27th.

August opened with an extremely heavy fall of rain over our north-east counties, after which the weather improved very materially, many places in the southern parts of the country experiencing an entire absence of precipitation for periods ranging between 14 and 16 days. Bright sunshine was very prevalent, and temperature rose to a high summer level, the shade maxima on the 12th being above 85° in many parts of England. After the middle of the month the weather again fell into a very disturbed condition, with frequent falls of rain, and occasional thunderstorms, in nearly all parts of the country. Between one and a half and two inches of rain occurred at many English stations on the 17th and as much as 2·6 inches at Maidenhead, almost equally large amounts being experienced locally on the 19th and 20th, and on our south-east coasts on the 24th. The thermometer was usually below its average level, and on the 30th and 31st, when a fresh wind swept down from the Northward, the maximum readings were mostly below 60°, and at some northern stations slightly below 55°.

September witnessed a continuation of very changeable weather over the southern and eastern parts of the country. A partial improvement was, however, reported in the western districts, where very little rain fell between the 7th and 20th. Temperature was generally low for the time of year, the thermometer seldom reaching a maximum of 70°, and often failing to touch 60°. A heavy fall of rain occurred in the south of England on the 10th, and severe thunderstorms, accompanied in some places by further heavy downpours, were experienced in and around the Thames Valley on the 17th, and over a large part of England on the 23rd and 24th. The heaviest rainfall of the month was, however, experienced on the 27th and 28th in the western parts of the country, North Wales and some neighbouring parts of England and Ireland being affected on the former day, and South Wales and the south-west of England on the latter.

For the quarter as a whole the *mean temperature* was below the average, the deficit ranging from about half a degree in England North-East and the English Channel, to rather more than a degree in London and over the south-eastern counties generally. The highest temperatures occurred in August, either about the 9th, the 12th or the 15th, the thermometer in the shade rising on one or on each of these dates above 80° in many parts of the country. On the 12th readings above 85° were recorded in the south-east of England,

and a reading of 90° at Maidenhead. At no other time in the quarter did the thermometer touch 80°, and throughout the month of September readings as high as 70° were very rare. The lowest temperatures were recorded about the middle of September, mostly between the 14th and 16th, when slight frosts were recorded by thermometers in the screen, and sharp frosts on the surface of the grass. Slight ground frosts were also experienced in some parts of Central England on the nights of August 2nd and 27th, and more generally on the nights of September 1st, 7th-8th, 13th-21st, and 27th-29th.

Both as regards frequency and amount the *rainfall* of the quarter was in excess of the average in all but the south-western parts of the country. Most districts experienced 7 rain days in excess of the normal number, England Central as many as 9 days, and England East 10 days, the total amount being only 5 per cent. more than the average in England East, and 6 per cent. more in London, but 17 per cent. more in England Central, 19 per cent. more in England North-East, and 26 per cent. more in England South-East. In South Wales and England South-West the number of rain days agreed very closely with the normal and the total fall amounted to only 94 per cent. of the average; while in the English Channel district the number of rain days was 8 less than usual, and the total fall did not amount to more than 60 per cent. of the average. The only drought of any consequence occurred in the earlier half of August, when several places in the south experienced 15 or 16 consecutive rainless days. In the Western districts, however, very little rain fell during the middle portion of September, and in some parts of Wales there was an entire absence of precipitation during the 15 days ending with the 22nd.

*Bright sunshine.*—The total duration was deficient in all districts excepting South Wales and England South-West, where it was in exact accordance with the normal. In London the deficiency was small, but over the country generally it was rather considerable, the total amount in England North-East being as many as 50 hours below the average. The finest week in the quarter was that ending with August 14th, when more than 60 per cent. of the possible duration was recorded over the country generally, more than 70 per cent. in all the southern districts, and as much as 78 per cent. in the English Channel.

### Deaths.

The deaths registered in England and Wales last quarter numbered 104,741, and were in the proportion of 11·6 annually per 1000 persons living; this rate is 3·4 per 1000 below the mean rate in the ten preceding third quarters, and is the lowest death-rate recorded in any third quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the death-rates ranged from 9·1 in Middlesex and in Buckinghamshire, 9·2 in Northamptonshire, 9·4 in Dorsetshire, 9·7 in Kent, and 9·9 in Essex, to 13·0 in Staffordshire, 13·1 in Northumberland, 13·3 in the North Riding of Yorkshire and in Glamorganshire, 13·4 in Lancashire, and 13·5 in Carmarthenshire.

The 104,741 registered deaths included 54,669 of males and 50,072 of females, the death-rate among males being 12·6, and that among females 10·7, per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding third quarters, the death-rate of males showed a decrease of 3·6, and that of females a decrease of 3·1. Out of equal numbers living,

the deaths of males were to those of females as 117 is to 100; the mean proportion in the third quarters of the ten preceding years having been the same.

### *Urban and Rural Mortality.*

In the 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1909 is estimated at about sixteen and a half millions, the death-rate calculated without reference to sex and age constitution of the populations was 11·8 per 1000 living; the rates in the three preceding third quarters having been 16·2, 12·2, and 13·3. The crude rates in the several towns ranged from 5·8 in Hornsey, 6·4 in Kings Norton, 7·5 in Walthamstow, 8·0 in Willesden, 8·1 in East Ham, 8·5 in Burton on Trent, in Handsworth (Staffs.) and in Barrow in Furness, to 15·4 in Bootle, 15·5 in Tynemouth, 15·6 in Middlesbrough, 15·8 in Newport (Mon.), 16·3 in Liverpool, and 17·7 in Swansea.

In the 143 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at over five millions, the crude death-rate was 11·3 per 1000 living; the rates in the three preceding third quarters having been 14·4, 11·6, and 12·1.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns and more than seven and a half millions in rural districts, the crude death-rate was 11·6 per 1000 living; the rates in the three preceding third quarters having been 13·5, 12·1, and 12·4.

The crude death-rate, that is the proportion of deaths from all causes to each thousand of the population, is a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the sex and age constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xv.)

### *September Quarter, 1909.*

	Crude Death-rates.	Corrected Death-rates.
England and Wales ... ..	11·6	11·6
76 Great Towns ....	11·8	12·5
143 Smaller Towns ... ..	11·3	11·8
England and Wales, less the 219 Towns	11·6	10·9

It should further be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public Institutions the death-rate in the rural area may possibly be somewhat overstated.

### *Mortality at Different Ages.*

Of the 104,741 deaths registered in England and Wales last quarter, 23,331 were those of infants under one year of age, 47,893 those of persons aged between one year and sixty years, and 33,517 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 102 per 1000; this proportion was 64 per 1000 below the average in the ten preceding third quarters. Among registration counties with populations exceeding 100,000, the lowest proportions were 50 in Dorsetshire, 51 in Hertfordshire, 54 in Buckinghamshire, 56 in Suffolk and in Wiltshire, and 58 in Bedfordshire. The highest proportions were 117 in Staffordshire, 118 in Warwickshire and in Carmarthenshire, 120 in Lancashire, 122 in Glamorganshire, and 131 in Nottinghamshire.

In the 76 great towns infantile mortality averaged 119 per 1000 births, being 17 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 43 in Kings Norton, 50 in Hornsey, 52 in Ipswich and in Barrow in Furness, 62 in Halifax, and 67 in Croydon; the highest were 156 in Hanley, 158 in Bootle, 159 in Rhondda, 168 in Wigan, 172 in Swansea, and 177 in Nottingham. Among the 143 smaller towns infantile mortality averaged 105 per 1000 births, ranging from 28 in Guildford, 33 in Margate, 41 in Hendon, 43 in Tunbridge Wells, and 47 in Gillingham and in Southport, to 192 in Longton, 195 in Doncaster, 207 in Hindley, 208 in Widnes, 249 in Ilkeston, and 296 in Ince in Makerfield. Excluding these 219 towns, infantile mortality in the remainder of England and Wales was in the proportion of 82 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 5.9 per 1000 of the estimated population at this group of ages, being 1.2 below the mean rate in the ten preceding third quarters. In the 76 great towns the mean mortality at this age-group was 6.1 per 1000, the death-rates ranging from 2.9 in Hornsey, 3.2 in Kings Norton, 3.6 in Reading, 4.0 in Handsworth (Staffs.), 4.1 in Croydon, and 4.2 in Willesden, to 8.5 in Bootle, 8.7 in Oldham and in Middlesbrough, 8.8 in Tynemouth, 9.0 in Liverpool, 9.1 in Newport (Mon.) and 9.8 in Swansea. In the 143 smaller towns the mortality at this age-group averaged 5.7 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 50.2 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding third quarters having been 52.8. In the 76 great towns the mean mortality at this age-group was 51.2 per 1000; the lowest rates were 36.7 in Smethwick, 37.4 in York, 37.6 in Leyton, 38.9 in Aston Manor, 39.5 in Hornsey, and 39.8 in Walthamstow; the highest rates were 66.5 in Burnley and in Stockton on Tees, 69.7 in Wigan, 71.2 in St. Helens, 75.7 in Oldham, and 81.6 in Warrington. In the 143 smaller towns the rate averaged 52.0 per 1000.

Compared with the mean rates in the ten preceding third quarters, the mortality of infants under one year of age showed a decrease of 38.6 per cent., that of persons between one year and sixty years of age a decrease of 16.9 per cent., and that of persons aged sixty years and upwards a decrease of 4.9 per cent.

#### *Mortality from certain Epidemic Diseases.*

The 104,741 deaths from all causes include—

5,825	that were attributed to diarrhoea,
1,793	“ “ measles,
1,287	“ “ whooping-cough,
947	“ “ diphtheria,
642	“ “ scarlet fever,
459	“ “ “fever,”
0	“ “ small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 10,953 deaths were referred last quarter, being in the proportion of 1·22 per 1000 of the estimated population, or 1·54 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rates of mortality from these diseases were in all cases below the decennial averages.

*Diarrhœa* was the assigned cause of 5,825 deaths last quarter, corresponding to an annual rate of 0·65 per 1000, which is lower by 1·35 per 1000 than the decennial average rate for the third quarter of the year. In four counties no deaths from diarrhœa were registered last quarter. Among counties with populations exceeding 100,000 persons, the highest death-rates were 0·81 in Staffordshire, 0·82 in Leicestershire, 0·91 in Lancashire, 0·94 in the East Riding of Yorkshire, 1·09 in Glamorganshire, and 1·24 in Nottinghamshire. In the 76 great towns the average death-rate from diarrhœa was 0·96 per 1000. The highest death-rates among these towns were 1·97 in West Ham, 2·06 in Nottingham, 2·22 in Warrington, 2·39 in Rhondda, 2·53 in Swansea, and 2·77 in Bootle. In the 143 smaller towns the average death-rate was 0·59 per 1000 of the population, the mortality being highest in Bilston, Barnsley, Barking Town, Ilkeston, Leigh (Lancs.), and Ince in Makerfield. In the remainder of England and Wales the death-rate from diarrhœa averaged 0·31 per 1000.

In accordance with precedent special tables relating to summer mortality from diarrhœa have been inserted in the present Return. (See Tables XIII–XV).

*Measles* was returned as the cause of 1,793 deaths last quarter, corresponding to an annual rate of 0·20 per 1000 of the population, or 0·03 per 1000 below the average in the third quarters of the preceding ten years. Of the 55 registration counties, eight were free from measles mortality, and the death-rate did not exceed 0·03 per 1000 either in Cambridgeshire, Suffolk, Wiltshire, Devonshire, Cornwall, or Somersetshire. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·31 in Worcestershire, 0·32 in Durham, 0·38 in Nottinghamshire, 0·76 in Monmouthshire, and 0·99 in Staffordshire. In the 76 great towns measles caused an average mortality of 0·21 per 1000. In sixteen of these towns no deaths from this disease were registered, and the death-rate did not exceed 0·02 per 1000 in Portsmouth. The highest death-rates were 0·85 in Walsall, 1·35 in Coventry, 1·53 in Wolverhampton, 1·82 in West Bromwich, and 3·12 in Newport (Mon.). In the 143 smaller towns, the average death-rate was 0·28 per 1000 living, the highest mortality among these towns being in Tipton, Coseley, Oldbury, Ilkeston, Burslem, and Bilston. In the remainder of England and Wales the average measles death-rate was 0·16 per 1000.

*Whooping-cough* accounted last quarter for 1,287 deaths, and for a death-rate of 0·14 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·09 per 1000. In eight of the counties no deaths from whooping-cough were registered last quarter, and the death-rate did not exceed 0·03 per 1000 either in Suffolk, Wiltshire, Dorsetshire, or in Denbighshire. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·21 in Carmarthenshire, 0·23 in Glamorganshire, 0·24 in Derbyshire, 0·26 in Staffordshire, 0·30 in Essex, and 0·39 in the

North Riding of Yorkshire. In the 76 great towns whooping-cough caused an average death-rate of 0·17 per 1000 living. No deaths from this disease occurred in twelve of these towns, and the death-rate did not exceed 0·03 in Nottingham, in Birkenhead or in Sheffield; but it was equal to 0·49 in Swansea, 0·53 in Walthamstow, 0·54 in West Ham, 0·71 in Derby, 0·75 in Great Yarmouth, and 0·80 in Middlesbrough. In the 143 smaller towns the average death-rate from whooping-cough was 0·15 per 1000, the mortality being highest in Longton, Oldbury, Brighouse, Bilston, and Widnes, in which town it caused a rate of 1·74 per 1000. In the remainder of England and Wales whooping-cough caused an average mortality of 0·11 per 1000 annually.

*Diphtheria* (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 947 deaths, a number corresponding to an annual rate of 0·11 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·06 per 1000. In six counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·16 in Derbyshire, 0·17 in Dorsetshire, 0·18 in Monmouthshire, 0·21 in Lincolnshire, and 0·24 in Carmarthen-shire. The average death-rate from diphtheria in the 76 great towns was equal to 0·11 per 1000 of their aggregate population. Eleven of these towns were free from diphtheria mortality; and the death-rate did not exceed 0·03 per 1000 in Birkenhead, in Preston, or in Sheffield. The highest death-rates were 0·32 in Barrow in Furness, 0·34 in Devonport, 0·36 in Salford and in Tynemouth, 0·39 in Kings Norton, and 0·52 in Hanley. In the 143 smaller towns the mortality from this disease averaged 0·11 per 1000, the rate being highest in Gillingham, Gloucester, Enfield, Stretford, and Lincoln, in which town it caused a rate of 1·16 per 1000. In the remainder of England and Wales diphtheria caused an average mortality of 0·10 per 1000 living.

*Scarlet fever* accounted last quarter for the deaths of 642 persons, equal to a rate of 0·07 per 1000 living, or 0·03 per 1000 less than the decennial average rate for the third quarter. Eleven of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·12 in Denbighshire, 0·13 in Warwickshire, 0·14 in Cheshire and in Lancashire, and 0·15 in Carmarthenshire. In the 76 great towns scarlet fever accounted for an average mortality of 0·09 per 1000 annually. No deaths from this disease were recorded in fourteen of these towns, and the death-rate did not exceed 0·02 per 1000 in Bradford or in Leeds. The highest scarlet fever death-rates were 0·21 in Manchester, 0·22 in Tynemouth, 0·24 in South Shields, 0·26 in Blackburn, 0·38 in Salford, and 0·39 in Warrington. In the 143 smaller towns the average death-rate from scarlet fever was 0·07 per 1000 living, the highest mortality being in Longton, Heywood, Chadderton, and Glossop. In the remainder of England and Wales this disease caused an average death-rate of 0·05 per 1000 living.

"*Fever*" (including the three chief forms—*typhus*, *enteric fever*, and "*pyrexia*" of uncertain origin) was the registered cause of 459 deaths last quarter, equal to an annual death-rate of 0·05 per 1000 of the population, or 0·07 per 1000 less than the average in the third quarters of the previous ten years. In nine counties no deaths from fever were returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·09

in Lincolnshire, in Lancashire, and in Denbighshire, 0.12 in Carmarthenshire, and 0.24 in Essex. In the 76 great towns fever caused an average mortality of 0.05 per 1000 annually. In twenty-three of these great towns no deaths from fever occurred, and the death-rate did not exceed 0.02 per 1000 in London and in Leicester. The towns with the highest fever death-rates were Devonport, where the rate was 0.14 per 1000, Warrington 0.17, Salford and Rotherham 0.18, Portsmouth 0.21, and Grimsby 0.38. In the 143 smaller towns fever caused an average mortality of 0.05 per 1000 annually, the rate being highest in Hindley and in Hebburn. In the remainder of England and Wales the death-rate from fever averaged 0.05 per 1000.

No deaths from *small-pox* were registered last quarter in any part of England and Wales. The deaths in the four quarters immediately preceding numbered 3, 0, 8, and 6, respectively.

### *Violent Deaths.*

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,649 last quarter, and corresponded to an annual rate of 0.52 per 1000 of the population, which is 0.07 per 1000 below the average in the ten preceding third quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0.31 in Northamptonshire, 0.32 in Herefordshire, 0.37 in Middlesex, 0.38 in Dorsetshire, and 0.39 in Hertfordshire and in Buckinghamshire; the highest rates were 0.63 in Norfolk and in Durham, 0.65 in Derbyshire, 0.66 in the East Riding of Yorkshire, 0.72 in Glamorganshire, and 0.76 in Monmouthshire. In the 76 great towns the mean rate was 0.48 per 1000 living; among the several towns the rate was only 0.08 in Northampton, 0.22 in Bournemouth and in Warrington, 0.24 in Walsall, 0.25 in Willesden, and 0.26 in Newcastle on Tyne; but it rose to 0.81 in Sunderland, 0.82 in South Shields, 0.83 in Rhondda, 1.07 in Merthyr Tydfil, and 1.20 in Great Yarmouth.

### *Certification of Causes of Death.*

Of the 104,741 deaths registered in England and Wales last quarter, the causes of 95,412, or 91.1 per cent., were certified by registered medical practitioners, and the causes of 7,948, or 7.6 per cent., by coroners, after inquest; whilst the causes of the remaining 1,381, or 1.3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding third quarters having been 1.5. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Middlesex, Wiltshire, Dorsetshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Leicestershire, Cheshire, the West and East Ridings of Yorkshire, Monmouthshire, and Glamorganshire, but it reached 2.9 in Berkshire and in Derbyshire, 3.1 in Herefordshire, 3.4 in Durham, and 4.2 in Cumberland. In the 76 great towns the mean proportion of uncertified deaths was 0.7 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, West Ham, East Ham, Leyton, Hastings, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Walsall, Derby, Stockport, York, West Hartlepool, Newcastle on Tyne, Cardiff, Merthyr Tydfil, or in Swansea, the proportion per cent. rose to 3.1 in Kings Norton and in Warrington, 3.5 in Preston, 3.7 in Reading, 3.8 in Bootle and in St. Helens, and 4.7 in Gateshead.

### Inquests.

Inquests were held in England and Wales concerning 7,948, or 7·6 per cent., of the total deaths, the mean proportion in the ten preceding third quarters having been 6·7 per cent. In the 76 great towns the proportion of inquest cases averaged 8·0 per cent., ranging from 2·3 in Warrington, 2·9 in Northampton, 3·7 in Middlesbrough, 3·8 in Bootle, and 4·1 in Gateshead, to 11·4 in Leyton and in Portsmouth, 13·2 in Walthamstow and in Brighton, 15·3 in Grimsby, and 16·0 in Great Yarmouth.

### Deaths in Public Institutions.

The total deaths registered in England and Wales include 21,483, or 20·5 per cent., that occurred either in workhouses, in hospitals, or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding third quarters having been 16·1 per cent. In the 76 great towns the deaths in public institutions averaged 27·6 per cent. of the total deaths, the lowest percentages in the several towns being 3·8 in Rhondda, 8·4 in Kings Norton, 9·8 in Smethwick, 10·1 in Handsworth (Staffs.), 10·7 in Merthyr Tydfil, and 10·9 in Walsall; the highest percentages were 32·0 in Willesden, 33·5 in Liverpool, 34·8 in Tottenham, and 42·7 in London.

### EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh ... ..	19·9	12·2
Glasgow ... ..	25·3	12·6
Dublin ... ..	29·1	17·2
Belfast ... ..	27·0	14·6

### COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 30 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 2nd October, 1909 (Table XVI.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the third quarter of 1909 were as follows:—

#### BIRTH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Toronto ... ..	35·3	Brussels ... ..	16·0
Trieste ... ..	32·8	Paris ... ..	17·4
Bucarest ... ..	29·4	Antwerp ... ..	18·5
Breslau ... ..	28·3	Prague ... ..	19·0
Copenhagen ... ..	26·7	Vienna ... ..	20·4
New York ... ..	26·7	Berlin ... ..	20·5
London ... 23·9			

## DEATH-RATES.

—	Highest per 1000 living.	—	Lowest per 1000 living
Moscow ... ..	34·2	Amsterdam ... ..	10·2
Bucarest ... ..	25·7	Christiania ... ..	10·4
St. Petersburg ... ..	25·2	Copenhagen ... ..	11·5
Trieste ... ..	23·8	Antwerp ... ..	11·8
Toronto ... ..	22·0	Stockholm ... ..	12·4
Breslau ... ..	21·7	Brussels ... ..	12·8
London ... 10·8			

*Small-pox* caused 61 deaths in St. Petersburg, 56 in Moscow, 12 in Rio de Janeiro, and 1 in Paris.

*Asiatic Cholera* caused 1548 deaths in St. Petersburg, 9 in Moscow, and 1 in Amsterdam.

The mortality from *measles* was highest in St. Petersburg, Antwerp, Moscow, Trieste, and Amsterdam; from *scarlet fever* in Bucarest, Moscow, St. Petersburg, and Berlin; from *diphtheria* in Toronto, Moscow, Hamburg, and St. Petersburg; from *whooping-cough* in Moscow, Breslau, St. Petersburg, Trieste, and Amsterdam; from "*fever*" in Bucarest, Toronto, New Orleans, St. Petersburg, and Budapest; and from *diarrhœal diseases* in Moscow, Breslau, Bucarest, and Trieste.

*Infantile Mortality*.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 66 in Christiania, 72 in Amsterdam, 82 in Copenhagen, and 83 in Stockholm, to 205 in Antwerp, 250 in Trieste, 264 in Bucarest, and 313 in Breslau. In London the proportion was 109 per 1000 births.

INDIAN CITIES.—The death-rate was equal to 34·7 per 1000 in Madras, 29·8 in Bombay, and 21·1 in Calcutta. *Small-pox* caused 40 deaths in Bombay, 13 in Madras, and 8 in Calcutta; *measles* caused 27 deaths in Madras, 13 in Calcutta, and 11 in Bombay. Under the heading "*fever*" 1,343 deaths were returned in Madras, 1060 in Calcutta, and 948 in Bombay, including 320 deaths from *plague* in Bombay, 189 in Calcutta, and 2 in Madras. The mortality from *diarrhœal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 365 deaths in Bombay, 155 in Calcutta, and 5 in Madras.

#### RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 2nd October, 1909 (*see* pages xxvii—xxxii); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxiii—xxxviii).

TABLE V.—76 Great Towns.—Population Births, Deaths, and Meteorology in the 13 Weeks ended 2nd October, 1909.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

TOWNS.	ESTIMATED POPULATION in the middle of 1906.	BIRTHS.	DEATHS.	The DEATHS registered include														MEAN TEMPERATURE (Degrees Fahrenheit).	TOWNS.

The Registration Districts, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

<sup>a</sup> See page 2, note.<sup>b</sup>

<sup>b</sup> For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

## II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.		Area in Statute Acres.	Enumerated Population, 1901.	Marriages		Births	Deaths		The DEATHS in the Quarter are stated by the Registrars to include												
				Registered in Quarter ended 30 June 1906.	Registered in Quarter ended 30 Sept. 1906.		Average in Quarters ended 30 Sept. in the 3 Years 1904-06.	Registered in Quarter ended 30 Sept. 1906.	Deaths of		Deaths from								Inquest Cases.	Deaths in Public Institutions.	Unofficial Causes of Death.
									Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Violence.

\* The Registration Sub-districts (2019 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; W indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H another Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

\* 222 : 1, 2.—On 1st September, 1909, Cromer (2) sub-district was abolished and its constituent parts divided between Cromer, re-named Cromer (1), and Holt, re-named Sheringham (2), sub-districts, *see* page 71. The births and deaths are shown as if the change had taken place at the beginning of the quarter.

† 225 : 1, 2.—On 1st July, 1909, the boundary between these sub-districts was altered ; *see* page 71.

\* 228 : 1.—Of the 3 deaths from measles, 2 belonged to the parish of Blofield.

# METEOROLOGY.

---

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING  
THE QUARTER ENDED SEPTEMBER 30TH, 1909.

EXTRACTED FROM THE  
MONTHLY WEATHER REPORTS  
OF THE  
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 209 STATIONS,  
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56  
STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

---

## JULY, 1909.

**Pressure, Winds and Weather.**—Throughout July the distribution of pressure over the British Isles, the northern half of Europe, and the Icelandic region was of an unsettled type, and although the atmospheric conditions differed materially from those of June, the weather of the two months presented many features in common—both being dull, wet and cold. The anticyclone which during the greater part of June had maintained a position on the Atlantic, took up a more southerly position towards the close of the month, and from the beginning to the end of July the area of maximum pressure was found beyond our own south-western coasts, over the Bay of Biscay and the Spanish Peninsula, or over the more western portion of the Continent. Northward of this anticyclone the whole region within the limits of observation was open to the advance of cyclonic systems from the northern portion of the Atlantic. These disturbances were very numerous. Some pressure minima passed eastward across or immediately to the south of Iceland, but the majority visited some part of the United Kingdom, not one, however, being found as far south as the English Channel. For the whole of the month, therefore, the distribution of mean pressure was of a very regular character. There was a belt of low barometer readings, below 29·7 ins., extending from off the south coast of Iceland eastward across the Faerøe and beyond the North of Scotland to Scandinavia. Southward across the British Isles there was a gradual increase in the values, to 30·05 ins., on the western half of the English Channel, above 30·1 ins. on the Bay of Biscay, and as high as 30·38 ins. at the Azores. Over Iceland the values increased northward, to above 29·75 ins. along the north coast.

At the home stations the mean readings were slightly above the average in the south, from Valencia to Jersey, but over the rest of the Kingdom they were below it, the deficiency increasing northward to more than 0·1 in. over Scotland, and amounting to 0·16 in. at Sumburgh Head. Over North Britain the barometer stood highest, slightly above 30·25 ins., on the 1st and 2nd; but elsewhere it attained its maximum level on the 19th or 20th, on the former day mounting to 30·44 ins. at Valencia. Although a very unsettled month, the disturbances as a rule were not of much depth, the barometer rarely descending as low as 29·5 ins. On the 23rd, however, it fell below 29·1 ins. at Stornoway, and two days later, in another depression, it dropped to 29·08 ins. at Shields. These two stations consequently returned the greatest range of pressure for the month, 1·2 in., but at most places it was less than an inch, less than 0·8 in. from Jersey and Portland Bill to Clacton-on-Sea.

While the relative distribution over these islands was slightly more northerly than the usual westerly type, the pressure gradient showed a considerable increase, the difference between Jersey and Sumburgh Head being as much as 0·37 in., against an average of 0·17 in. This steeper gradient for the month under review

was marked in all parts of the country by winds of more than ordinary strength for the time of year. Fresh to strong breezes were in fact experienced very commonly, and during the second half of the period the force of a high wind was felt nearly every day in various localities. On the 8th Spurn Head, and on the 10th Roche's Point and Markree Castle, reported a Northerly gale, on the 20th Markree Castle, and on the 24th Spurn Head had a South-West gale. The self-recording instruments registered neither gales nor severe squalls.

During the first half of the month the centres of all but one of the disturbances were in the extreme north of the field of observation, the exception being one which appeared to the southward of Iceland on the 5th. Moving on a general south-easterly course this crossed Scotland on the 6th, and then travelled away to the Baltic and North Russia. It was one of the salient features of this portion of the month that the northern disturbances produced very frequent but not heavy rains over these islands, and it was this frequency rather than the quantity of the rain which led to the common impression that the month was generally wet. In many localities the amount of rain collected was below the average to an appreciable extent. For about a week round the 17th several places in the south and east had either no rain at all, or only some trifling showers. The passage of small secondary disturbances marked the outburst of local thunderstorms in many districts on various days, the storms being heavy and accompanied by hail in a few neighbourhoods, but the rainfalls of an inch or more on any one day were unusually few in number—on the 9th 1·1 in. at Bethesda and Towyn, and 1·2 in. at Mount Callan (Clare); on the 15th 1 in. at Stonyhurst, and 1·4 in. at Ford (Argyll); and on the 16th 1·2 in. at Caragh Lake (Kerry).

With the appearance of a depression to the north-westward of the Hebrides on the morning of the 20th there came a change in the character of the rainfall, which for the remainder of the month was not only frequent but also very heavy. The disturbance of the 20th moved due east between the Faeröe and Shetland, dispersing on reaching Norway on the 22nd, when another was found to be approaching the Hebrides from the westward. This proved to be one of the two deepest systems of the month. On the morning of the 24th wireless reports from Atlantic liners showed the formation of a new depression about 300 miles west from the Fastnet. By the morning of the 25th its centre was nearing Pembroke, and on the morning of the 26th it was off Aberdeen. On that date wireless reports again disclosed the existence of an Atlantic disturbance. By the evening of the 27th this was entering the Bristol Channel, and maintaining an easterly to north-easterly course it traversed southern England. Smaller disturbances arrived on our north-western coasts from the Atlantic on the 29th and 30th, and they served to maintain the very unsettled weather to the close of the month.

This constant succession of low pressure systems explains the unusually windy character of the period from the 20th. Heavy rain fell generally, and on almost all days there were instances of 1 inch or more in 24 hours. The 27th was one of the most remarkable of the wet days, more than an inch of rain being registered at a large number of places in the southern half of England, the records showing 1·5 in. at Salisbury, Shaftesbury and Tavistock, 1·6 in. at Watergate (Sussex), and 1·8 in. at Plymouth. Thunderstorms occurred in Lancashire on the 23rd and 24th; over northern England on the 25th; in the Thames Valley and southward on the 26th; and in the north-east of England on the 30th.

These very inclement conditions were associated with abnormally low day temperatures. In many districts the thermometer never rose to 70°, and on numerous occasions the maximum failed to reach 60°. At Douglas, for instance, there were as many as 13 days below 60°. On the 11th the maximum was 54° at Ampleforth, Belvoir, Bridlington and Lincoln, and the same value was recorded at Morpeth (Cockle Park) on the 25th, on which date Mountmellick only touched 53°. At Seaham, on the 1st, the maximum was as low as 52°. Temperatures above 75° were rarely registered, Cambridge and Raunds touching 77° on the 17th, Greenwich, Camden Square 78° on the 18th, and Maidenhead on the 20th and 21st. The nights generally were not so cold, but there were a few minimum shade temperatures below 40°, as low as 35° at Balmoral and Llangammarch Wells on the 1st, and at Alnwick on the 2nd; and 33° at West Linton on the 1st.

Earthquake shocks were felt at Laudale on the 28th and 29th.

Fog was reported rather frequently on the Irish coast, in most neighbourhoods from the 12th to the 18th, and the 27th to the 31st. On the western coast it was more often observed than for a long time past. Stations on the Welsh Coast and across the Bristol Channel had fog on numerous occasions. Along the English Channel it was less frequent, affecting the western half as a rule. Between Shetland and the Moray Firth there were ten days with fog, but it was almost entirely absent along the rest of the east of Britain.

The mean temperature of the sea water round our coasts was higher than in June, the difference amounting as a rule to between 2° and 4°. Generally speaking, the water was also warmer than the air on shore, but on our extreme western and northern coasts the difference was scarcely perceptible.

**Rainfall.**—The rainfall map for last month shows that the areas of maximum fall occupied their accustomed places over the north-west of Ireland and the western portions of Great Britain. In other parts of the Kingdom the distribution was of a less normal character, the most striking feature being perhaps the deficiency existing over the north-eastern portion of England, almost the only district in which the fall was below the average. A total of more than 7 ins. was recorded in several parts of the wetter regions, and as much as 10·6 ins. at Killibegs, 8·9 ins. at Cruachan, and 8·8 ins. at Ford (both on Loch Awe). Among the smallest aggregates may be mentioned 1·4 in. at Ballinacurra, and 1·6 in. at Hawarden Bridge, Newquay, Seilly and Portlaid Bill. The number of days with rain was almost everywhere in excess of the average; at Stonyhurst and Blacksod Point there were 27 such occasions, at Arlington 28, and at Glencarron as many as 30.

**Bright Sunshine.**—The total amount recorded was in nearly all places below the average, but in the southern parts of England the deficiency was not so large as in June. At many scattered places in the western and northern parts of the United Kingdom, the duration was less than 120 hours, the smallest aggregates being 91 hours at Fort Augustus, 112 hours at York, and 114 hours at Lancaster and Manchester (Whitworth Park). More than 200 hours were recorded at many stations situated both in the east and south-west of England, and as many as 228 hours at Weymouth, 230 hours at Guernsey (Villa Carey), and 233 hours at Torquay.

## AUGUST, 1909.

**Pressure, Winds and Weather.**—There were during the period now under review two well-marked types of pressure distribution over the British Isles and Western Europe. Almost constantly through the first half of August an anticyclonic system ruled. It varied somewhat in position and shape, at times extending from the Atlantic eastward across these Islands to Russia, at others contracting and occupying only the western regions, with its maximum of pressure further south and south-west. At no time, however, was it of any great intensity, the barometer nowhere passing above 30·4 ins. On the east coast of England pressure increased to 30·3 ins. on the 5th, and in the South-West of Ireland it touched 30·38 ins. on the 11th, the highest record in the Kingdom. After the 15th the conditions underwent a decided change, the anticyclone breaking up, and the distribution of pressure assuming a very unsettled type, a number of disturbances advancing from the northern portion of the Atlantic, several crossing the British Isles, others passing eastward in the neighbourhood of Iceland. Some of these more northern ones were of moderate depth, the barometer descending to nearly 29 ins. on a few occasions in Iceland and northern Norway. As a rule the depressions which visited this country were very shallow. There were few days on which the barometer fell as low as 29·5 ins., but at Portland Bill 29·37 ins. was recorded on the morning of the 17th, and at Sumburgh Head the same reading on the 20th. For the whole month, therefore, the extreme range of pressure was unusually small, greatest in the south-west of England, where it did not amount to an inch, and least, about  $\frac{3}{4}$  in., from Malin Head across to Leith and Shields. The mean values for the month ranged from a little above 30·05 ins. at some south-western stations and in France to 29·81 ins. at Sumburgh Head, and 29·61 ins. at Reykjavik (Iceland), the Shetland value being slightly below the normal, while all other stations showed an excess from 0·02 in. at Wick to 0·12 in. at Roche's Point and Valencia. The general distribution did not differ to any extent from the usual Westerly type, but the mean gradient was a little greater, and this is reflected in the comparative frequency of strong winds during the month. Gale force was but rarely experienced—on the 2nd from North-East at Yarmouth; on the 4th from South at Stornoway; on the 8th from West at Wick; and on the 20th from West at Malin Head (a strong gale).

In the rear of the series of disturbances which occasioned the very unsettled weather towards the close of July a decided increase of pressure set in on the last night, with the expansion eastward of an anticyclonic system out on the Atlantic. The observations for the opening day of August, however, afforded a very interesting instance of the development of a disturbance within a high pressure system, and within the region of rising barometer. On the morning of the 1st it was found that the ascent of the barometer was not so marked over southern Scotland as in neighbouring districts, so that a depression was forming; there was already a cyclonic circulation of light airs, and rain had set in over southern Ireland, North Wales and eastern Scotland. In the course of the day the minimum pressure was transferred to the Midland districts, where there was a slight decline of the barometer. Except in a few situations there was hardly any wind, but the weather

was of an exceedingly unsettled type, rain falling pretty generally, heaviest over England, and particularly over the north-eastern counties, between the Wash and the Tyne, where many amounts exceeding an inch were measured, the records ranging upwards to 1·3 in. at Skegness, 1·4 in. at Scarborough, 1·5 in. at Ampleforth, 1·6 in. at Hillington, 1·7 in. at Whitby, and the very large quantity of 2·7 ins. at Hull.

The morning of the 2nd found the disturbance passing away to the eastward across the Low Countries, the anticyclone was becoming established over these Islands, and a spell of fine, dry and warm weather had set in. At Cuckfield, Sandown, Totland Bay, Guernsey and Ballinacurra no rain fell during the first sixteen days of the month; at Harefield, in West Middlesex, none was measured in the sixteen days, 3rd to 18th; and over a considerable part of England and locally in Ireland there were fourteen or fifteen consecutive rainless days. This period was also the brightest which the country had experienced since May, the sunshine records in all districts being well above the normal. Temperature consequently improved very decidedly after the cold of the early days, many of the shade minima on the 3rd being below 40°, Balmoral 30°. From the 6th to the 15th the thermometer rose to 80° and upwards at numerous stations, at some of them on every day. By the 7th a maximum of 85° was reached at Maidenhead, and later still higher levels were attained, all at stations in England, the highest values being 89° at Cullompton, and 90° at Maidenhead on the 12th, and 92° at Epsom on the 15th.

The end of this fine period was indicated on the 15th by the break up of the high pressure system as it drifted from these islands towards central Europe, disturbances at the same time spreading down upon us from the Iceland region, and colder, unsettled and rainy weather soon became general over the country. While the main depression was far out on the Atlantic on the 15th, wireless reports from steamers showed the formation of a small secondary beyond the south-west of Ireland, and during its passage across to the Wash thunderstorms were experienced in many parts of Ireland and England, and at Whitby 1·3 in. of rain fell on the 16th; at Hull 0·6 in. fell in 20 minutes. On the morning of the 17th steamer reports disclosed the formation of another disturbance in about 51° N., 18° W. It advanced to the mouth of the English Channel by evening, and next day moved across south-eastern England to the middle of the North Sea, where it dispersed. This was one of the two deepest depressions of the month, and it was accompanied by strong or high winds from various points of the compass over the southern half of England, attaining the force of a gale locally on the French coast. During the progress of this system only a few places, nearly all in the eastern counties, reported thunderstorms. The most striking feature was the general and very heavy rain which accompanied the disturbance. At numerous stations in England and Wales more than an inch was registered as the result of the downpour of the 17th. Some of the principal falls were 1·4 in. at Bournemouth, Winslow and Hull; 1·5 in. at Parkstone, Oxford, Bawtry, Workop and Bridlington; 1·6 at Temple Bruer and Rauceby; 1·7 in. at Beaconsfield and Tealby; 1·9 in. at Marlborough; 2·2 ins. at Salisbury (in 5 hours); and 2·6 ins. at Maidenhead (nearly all within 2 hours). Similarly large quantities were reported at other places in the district round Maidenhead.

A disturbance which appeared off the south-west of Iceland on the 18th made very slow progress on its journey to the eastward, its centre not passing Shetland until the night of the 21st, dispersing on reaching Southern Norway next morning. This was the second moderately deep depression which visited us. It produced a good deal of squally strong to high South-Westerly and Westerly winds on various sections of our coasts, and unsettled weather generally. On the 19th Kirkby Lonsdale had over an inch of rain, and Kinlochewe 1·6 in.; on the 20th Dungeness 1·1 in., and Lancaster 1·5 in.; and on the 21st and 22nd thunderstorms occurred at a number of places in Ireland and England, but without exceptionally large rainfalls.

Wireless reports showed a new disturbance in about 58° N., 25° W., on the morning of the 22nd. It subsequently moved slowly across Scotland to the North Sea by the 25th, on which date thunderstorms occurred in many of our eastern counties, and very heavy rain fell in the south-east, as much as 1·3 in. at St. Leonards, and 1·4 in. at Dungeness.

A small secondary depression which appeared in about 54° N., 19° W., on the 28th was marked by some heavy rainfalls in the west as it moved eastward across Ireland and England, 1·3 in. being registered at Dunfanaghy.

This disturbed period, covering the second half of the month, was cold as well as wet, the afternoon temperatures being frequently below 60°, and on the 30th the maximum at Deerness was as low as 51°. As a rule the nights were not so cold, but on several occasions there were minimum values below 40°, down to 34° at Llangammarch Wells on the 28th.

Much fog was experienced on the western coasts daily through the first half of the month, at times very dense and interfering with navigation, especially between the 10th and 15th. With the exception of the 6th and 9th there was not much fog

on the east coast of Britain, and along the English Channel it was only occasionally reported locally. The second half of the month was almost entirely free on all coasts.

The temperature of the sea water along our shores was warmer than it was in July, generally by about  $2^{\circ}$  or  $3^{\circ}$ . Off the west of Ireland and the south-east of England the sea was somewhat warmer than the air on shore, but in most localities it was colder, by as much as  $4^{\circ}$  off the north-east of England and of Ireland.

Aurora was reported at Sumburgh Head on the 2nd and 4th.

**Rainfall.**—There was an excess of rain over the north-east and south-east counties of England, all other districts returning a deficiency, the loss in the west being large. Southern Ireland was exceptionally dry. Ballinacurra had only 0.3 in. for the month, Kilkenny less than  $\frac{1}{2}$  in., the loss at many stations exceeding 3 ins., at Valencia as much as 4.4 ins. The largest aggregates reported were 6 ins. at Kinlochewe, and 6.7 ins. at Glencarron. Rain was registered on 25 days at Glencarron and Fort William, and on 24 days at Sumburgh Head, but in many localities on less than 10 days, 6 at Ballinacurra and Waterford, and in Guernsey, 5 at Villa Carey, and 4 at Brooklyn.

**Bright Sunshine.**—There was an excess of bright sunshine in all districts, to the extent of 2 hours per day at some stations in the south-west of England, where the records showed 62 per cent. of the possible duration. Weymouth totalled 276 hours, Penzance 275, Falmouth and Torquay 273, and Salcombe 272 hours. The smallest aggregates were 123 hours at Whitworth Park, Manchester, and 117 hours (25 per cent. of the possible) at Fort Augustus.

## SEPTEMBER, 1909.

**Pressure, Winds and Weather.**—The distribution of atmospheric pressure in the course of September was of an unusual type. Through the first three weeks it was nearly always anticyclonic, but during the greater part of this period the area of maximum pressure was found out on the Atlantic, to the westward and south-westward. On the 12th it was shown by wireless reports from Transatlantic liners that the barometer stood above 30.6 ins. beyond the 25th meridian. At times, however, the anticyclone expanded in a north-easterly direction across these islands to Scandinavia and Northern Russia, and on some days pressure was as high in the vicinity of the Gulf of Finland as it had previously been on the ocean. In the British Isles the barometer attained its highest level on the 14th, when it passed 30.4 ins. at many stations, and reached 30.45 ins. at Donaghadee. Nearly the whole of the disturbances of this period had their pressure minima more or less distant from our coasts, most of them about Iceland and Scandinavia, but one which appeared to the southward of Iceland on the 5th followed a south-easterly course across the North of Scotland to Denmark. It proved to be the deepest which visited this country in the whole month. As the system approached the Hebrides the barometer fell rapidly, and on the 6th it dropped to 29.13 ins. at Stornoway, and below 29.5 ins. over Scotland and the North of England. With the closing week of the month the distribution became considerably modified, the anticyclones keeping to the northern and north-eastern regions about Iceland and Northern Europe, while the British Isles were affected by disturbances which came from various quarters or even formed over the country. But these depressions were all very shallow, so that few stations registered barometer readings below  $29\frac{1}{4}$  ins. The extreme range of pressure was consequently small, exceeding an inch in the northern districts of Britain, rather more than  $1\frac{1}{4}$  in. at Stornoway, while southward it diminished to less than  $\frac{1}{2}$  in. at Jersey. For the whole month the results show a mean pressure of 30.1 ins. off the west of Ireland, the values decreasing to about 30 ins. on the eastern side of the North Sea, and rather below 29.95 ins. in Iceland. At all the home stations the mean readings were above the average, by only 0.02 in. at Dungeness, but the excess increasing westward and northward to as much as 0.21 in. at Stornoway. The mean gradient was very slight, at about right angles to the normal, and favoured the prevalence of a Northerly type of conditions. The winds experienced were variable in direction, all quarters being represented, but those from points in the northern half of the compass predominated. Only on seven out of the first eleven days of the month did the force exceed that of a strong breeze at the telegraphic reporting stations, Holyhead reported a North-Westerly gale, and Malin Head a strong gale from the same quarter on the 7th.

Notwithstanding the general prevalence of anticyclonic conditions the first week was characterised by changeable unsettled weather, and, as already noted, it was

more breezy than the rest of the month. These results were due to the disturbances which were mainly to the northward and north-eastward. The influence of a depression centred over northern Sweden on the 1st extended to these islands, rain falling in nearly all districts, and thunderstorms occurring in isolated places in southern England. The deep disturbance of the 6th produced thunderstorms in eastern England, and in a severe storm at Cromer 1.55 in. of rain fell in 55 minutes. At Donaghadee the day's rainfall amounted to 1.1 in.

This was followed by a spell of about a fortnight of much finer and drier weather over the greater part of the Kingdom. At Mallaranny (Mayo) no rain fell on 17 consecutive days (9th to 25th), at Aberystwyth and Lampeter on 15 days (8th to 22nd), at Ennistymon (Clare) on 14 days (7th to 20th), and in numerous instances only a few light showers were experienced in from 15 to 20 days. Southport and the Manchester district had 0.01 in. and Liverpool 0.02 in. in 15 days, the Isle of Man 0.04 in. in 20 days. But this dry spell was marred by two very striking local interruptions. A shallow disturbance which appeared near Gibraltar on the 5th moved slowly northward across Spain and Western France, and on the 10th it lay over Brittany, causing strong to high Easterly and North-Easterly winds in the extreme south of England, with thunderstorms at a number of stations, and very heavy rain, an inch at Parkstone (Dorset), 1.1 in. at Portland Bill, 1.2 in. at Totland Bay, 1.5 in. at Sandown, and 1.8 in. at Ventnor.

On the 17th there occurred a very remarkable thunderstorm over many of the southern counties, mainly within the Thames watershed. The lightning was very frequent and of the most brilliant description, and the thunder was of extraordinary violence. During the progress of the storm rain fell heavily, in several localities mixed with hail. At Epsom 0.14 in. fell in two minutes, mixed with small but very hard cubes of ice; at Watlington (Oxon) 0.3 in. fell in 20 minutes; at Oxford 0.8 in. in 15 minutes, the total for the day being an inch; and at Wisley 1.4 in. fell in two hours.

After the 21st the weather fell into an extremely unsettled state. The south-eastern counties of England were visited by thunderstorms on the 22nd, and on the next day thunderstorms of more or less violence burst over nearly all England, the south of Scotland and in some parts of Ireland, Darwin reporting 1.1 in. of rain, Bradford 1.5 in., and Belvoir Castle 1.9 in., while it was stated that 3.4 in. fell at Castle Bytham (Lincs.). On the 24th the storm had extended as far north as the Orkneys, severe at Deerness, Kirkwall was flooded and there was loss of life. Very heavy rain fell on this day in Wales and the west of England, 1.1 in. at Abersychan (Monmouth), 1.2 in. at Bettws-y-Coed and Newchurch, 1.4 in. at Overcourt (Bristol), 1.6 in. at Newport and Ynis-y-fro, and 1.7 in. at Pant-yr-Eos.

Local thunderstorms occurred in the south-east of England on the 25th, and at Epsom there was a torrential downpour of rain which yielded 0.24 in. in 3 minutes. But by far the worst and most destructive rain storms of the month were associated with a shallow irregularity of pressure which left the Atlantic on the 27th, and dispersed on the Thames Estuary on the 30th. It seems to have produced no thunderstorms, but rain fell in large quantities, and especially on the 27th and 28th in the western districts. On the former date the amounts ranged up to 1.7 in. at Limerick, 1.9 in. at Carrigoran (Clare) and Holyhead, and 2.2 ins. at Mount Callan (Clare); on the 28th to 2 ins. in South Wales and North Devon. The area over which more than an inch of rain fell on each of these two days was unusually extensive.

Another notable feature of the month was the almost entire absence of warm days, maximum temperatures of 70° and upwards being exceptionally rare. On the 3rd Whitby registered 73°; on the 19th Cullompton and Killarney 72°; on the 22nd Maidenhead 72°, Guernsey 74°, and Reading 75.5°; and on the 23rd Hillington 74°. Afternoon readings below 60° were very commonly experienced, below 55° in numerous instances, 48° at Sumburgh Head on the 6th, 49° at Thorntonhall on the 27th, Buxton on the 28th, and Sumburgh Head on the 30th. As a general rule the nights were relatively milder than the days, many of the minimum values being as high as 56° to 59°. But there were a few nights of sharp cold, the shaded thermometer sinking to between 32° and 30° in various parts of the kingdom on the mornings of the 2nd, 8th, 9th, 14th, 15th, and 16th. West Linton had a minimum of 27° on the 15th, and Balmoral 26° on the 16th.

A severe magnetic storm occurred on the 25th, and it appears to have been world-wide in extent, interrupting telegraphic communications.

Aurora was observed at Balta Sound on the 10th, 16th and 19th; at Deerness on the 21st; and at Castlebay, Fort William, and in Anglesey and the Isle of Man on the 25th.

Fog was frequently and extensively experienced on the western and the eastern coasts, dense on some days, between the 17th and the 30th.

The temperature of the sea water round our coasts was colder than during August by from 3° to 5° in many localities, but the water was generally warmer than the air on shore, in several places by 3° or 4°.

**Rainfall.**—There was an excess of precipitation in most parts of eastern, south-eastern, midland and north-western England, the excess being more than an inch at a number of stations, as much as 2·1 ins. at Ventnor. In other districts there was a marked deficiency, which ranged up to 4·5 ins. at Fort William, and 5·1 ins. at Glencarron. The largest aggregate totals were 5·5 ins. at Arlington, 5·3 ins. at Bettws-y-Coed, and 4·9 ins. at Ventnor; the smallest 0·7 in. at Ballinacurra, and 0·6 in. at Scilly. Rain fell on 24 days at Cromer, on 9 days at Douglas. The Ballinacurra observer notes:—"The remarkable feature of this month was the continued drought following the very small August rainfall, 0·3 in., and unrelieved by sufficient rain to properly moisten the surface of the ground until the night of the 27th." At this station 0·5 in. fell in the last four days of the month, an amount which equalled the total quantity previously received in more than eight weeks.

**Bright Sunshine.**—Only the north of Scotland had an excess of sunshine, Fort Augustus returning an excess of 47 hours, and Stornoway 35 hours. In other regions the deficiency ranged up to 49 hours at Greenwich, 50 hours at Prestwich, and 52 hours at Oxford. At Whitworth Park, Manchester, the total duration was only 58 hours, or 15 per cent. of the possible, Hull, Birmingham, Huddersfield, Prestwich, and Newcastle on Tyne returning 16 per cent. Guernsey had the largest records, 172 hours (46 per cent.) at Brooklyn, and 182 hours (49 per cent.) at Villa Carey.

## TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of  
W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 82 to 91) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

## LIST OF STATIONS AND OBSERVERS.

\* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I, to the Weekly Weather Report of the Meteorological Office, 1908.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—The hours of observation are indicated by the type in which the names of stations are printed. Clarendon, normal climatological stations, 9 a.m. and 9 p.m.; **BLACK CAPITALS**, telegraphic reporting, normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only (Ventnor, 9 a.m. and 6 p.m.) At stations marked \* an additional observation is taken, at 3 p.m. in the case of stations printed in clarendon type, and at 1 p.m. in the case of stations printed in Roman type. These additional observations are used in preparing the wind summaries, and in computing the number of days of overcast or clear sky. At telegraphic reporting stations (black capitals or Roman type), the results given under "hygrometer" and "cloud" are based on the morning observations only. At Lincoln and Wakefield the hygrometrical results are based on the 9 a.m. observations only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. only, or 9 a.m. and 9 p.m., or 7 a.m., 1 p.m., 9 p.m., or 7 a.m. and 6 p.m., as the case may be.

Rainfall.—The amounts are for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the fixed hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Cloud (0-10).	Rain and other forms of Precipitation.				Weather, Number of days of										Wind. No. of observations at 9 a.m. and 9 p.m., or at 7 a.m., 1 p.m., 6 p.m., or 9 p.m.

**Wind Summaries.**—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

**Averages.**—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1881-1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

**Royal Observatory, Greenwich.**—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 1, 0, 0, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 0, 0, 0.

**Mean Values for Districts.**—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

[illegible]

## INDEX OF URBAN DISTRICTS.

As existing on 30th September, 1909, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked \* have been created, and the boundaries of those marked † have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,173 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 158 were each co-extensive, at the end of September, 1909, with one or more Registration Areas.

No. 244.] **Marriages**—*July, August, September, 1909.*  
**Births and Deaths**—*October, November, December, 1909.* [Price 9d.]

---

*General Register Office, Somerset House*  
*26th January, 1910.*

**UNITED KINGDOM.**

The POPULATION of the UNITED KINGDOM in the middle of 1909 is estimated at 45,004,384 persons; that of England and Wales at 35,756,615, that of Scotland at 4,877,648, and that of Ireland at 4,370,121.

In the United Kingdom 274,270 *births* and 165,109 *deaths* were registered in the three months ended 31st December 1909. The natural increase of population was, therefore, 109,161. The number of *persons married* in the quarter ended 30th September 1909 was 174,242.

The birth-rate in the United Kingdom in the *fourth* quarter of 1909 was 24·2, and the death-rate 14·6, per 1000 of the estimated population. The marriage-rate in the *third* quarter of 1909 was 15·4 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

**Passenger Movement.**

According to a Return issued by the Board of Trade it appears that in the three months ended 31st December 1909, the total passenger movement between the United Kingdom and places outside Europe showed a net balance outward of 49,224 passengers, compared with a net balance outward of 18,906 passengers in the corresponding period of the previous year.

The net balance outward among British subjects amounted to 32,414 persons. Of these 22,289 were English, 602 Welsh, 6,712 Scottish, and 4,243 Irish passengers, whilst there was a balance inward of 1,432 British Colonial passengers. Compared with the numbers in the corresponding period of the previous year the net balance outward of English passengers showed an increase of 48 per cent., that of Welsh an increase of 283 per cent., that of Scottish an increase of 108 per cent., and that of Irish an increase of 43 per cent., whilst the net balance inward of British Colonial passengers showed little variation.

Among foreign passengers there was a net balance outward of 16,810, against a net balance inward of 1,118 in the corresponding period of the previous year.

### ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2,015 registration sub-districts of England and Wales in the three months ended 31st December 1909; and the MARRIAGES in 15,756 churches or chapels, in 15,484 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ended 30th September 1909.

#### Marriages.

In the *third* quarter of 1909 the marriages of 147,578 persons were registered, being equal to an annual rate of 16·4 persons married per 1000 of the estimated population, against an average rate of 17·3 per 1,000 in the third quarter of the ten years 1899–1908.

Among registration counties with populations exceeding 100,000, the lowest marriage-rates were 11·3 in Shropshire, 11·9 in Carnarvonshire, 12·6 in Dorsetshire, 12·7 in Norfolk and in Herefordshire, 12·8 in Denbighshire, 13·1 in Kent, and 13·2 in Wiltshire; the highest rates were 17·1 in Nottinghamshire, 17·2 in Bedfordshire, 17·4 in Glamorganshire, 17·5 in Middlesex and in Carmarthenshire, 18·0 in Lancashire and in Monmouthshire, 18·8 in Oxfordshire, and 19·1 in London.

#### Births.

The births registered in the *fourth* quarter of 1909 numbered 219,182, and were in the proportion of 24·3 annually per 1000 of the population; this is 2·3 per 1000 below the mean birth-rate in the ten preceding fourth quarters, and is the lowest birth-rate recorded in any fourth quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the lowest birth-rates during the quarter were 17·7 in Carnarvonshire, 18·3 in Sussex, 20·2 in Northamptonshire, 20·5 in Dorsetshire and in Somersetshire, and 20·6 in Cornwall; the highest rates were 27·7 in the North Riding of Yorkshire, 27·9 in Northumberland, 28·8 in Nottinghamshire, 29·9 in Carmarthenshire, 31·3 in Durham, 34·2 in Glamorganshire, and 34·7 in Monmouthshire.

In the 76 great towns the birth-rate averaged 24·4 per 1000, ranging from 13·5 in Hornsey, 15·0 in Bournemouth, 15·4 in Hastings, 15·9 in Halifax, 18·0 in Bradford, and 18·1 in Handsworth (Staffs.), to 31·1 in Rotherham, 31·2 in Hanley, 31·8 in Swansea, 32·6 in Tynemouth, 36·7 in Merthyr Tydfil, and 41·6 in Rhondda. In the 143 smaller towns the mean birth-rate was 23·6 per 1000, and in the remainder of England and Wales, excluding the 219 chief towns, it was 24·5.

### Natural Increase of Population.

The natural increase of population in England and Wales last quarter by excess of births over deaths was 91,819, against 89,760, 89,641, and 90,061 in the fourth quarters of 1906, 1907, and 1908 respectively.

### Prices and Pauperism.

The average price of wheat per quarter, which had been 33s. 11d., 41s. 1d., and 40s. 3d., respectively in the preceding three quarters, was 32s. 5d. last quarter. The average wholesale prices per lb. of British beef and mutton at the Metropolitan Cattle Market were:—of inferior beef, 4d.; of prime beef, 7 $\frac{3}{8}$ d.; of inferior mutton, 4 $\frac{1}{2}$ d.; of prime mutton, 7 $\frac{1}{2}$ d. Compared with the average prices in the preceding three months, the price of inferior beef showed an increase of  $\frac{2}{3}$ d., and that of prime beef remained unchanged. The price of inferior mutton also was the same as in the preceding quarter, but that of prime mutton showed an increase of  $\frac{1}{8}$ d. The average price in the London Market of sea-borne coal put in barge from the collier in the Thames was 17s. 3d. per ton, having been the same in the fourth quarter of 1908. The average price of Consols was 82l. 12s. 6d., having been 84l. 0s. 6d. in the preceding quarter. The minimum annual rate per cent. of discount charged by the Bank of England which had been reduced from 3l. to 2l. 10s. on the 1st April 1909, was raised to 3l. on 7th October, to 4l. on 14th October, to 5l. on 21st October, and reduced to 4l. 10s. on 9th December. The mean rate during the quarter was 4l. 9s. 8d.

The average number of paupers relieved in England and Wales on the last day of each week in the quarter was 800,746, exclusive of lunatics in county and borough asylums, registered hospitals and licensed houses, of casual paupers, of persons receiving out-door medical relief only, and of patients in the fever and small-pox hospitals of the Metropolitan Asylum District. Of these 800,746 persons, 278,216 received in-door, and 522,530 out-door, relief. The proportion of the population in receipt of poor-law relief was 22·4 per 1000, against 22·3 and 23·1 per 1000 respectively in the fourth quarters of 1907 and 1908.

### Meteorology.

A detailed report, prepared in the Meteorological Office, on the weather over the United Kingdom, together with a table of Monthly Results for a number of stations in England and Wales, will be found on pp. 73–93.

During nearly two-thirds of the past quarter the weather was influenced almost exclusively by cyclonic systems, and as the baric minima lay in most instances to the westward or northward of the United Kingdom, the prevailing winds were from between South and West, and the general conditions mild and very changeable. In November the type of pressure distribution was, upon the other hand, distinctly anticyclonic, and the weather cold, quiet and dry, with exceptionally sharp autumnal frosts between the 16th and 24th of the month. Throughout the quarter there was usually sufficient wind to prevent the formation of fog; and although gales were somewhat rare, those of the 2nd–3rd and 21st–22nd December were of considerable severity. The rainstorm which occurred over southern England between October 26th and 28th was extremely heavy, and resulted in many places in serious floods. At the close of

the third week in December similar effects were produced over northern and central England by the rapid melting of deep snow, followed very closely by a heavy fall of rain.

October was generally rough and unsettled, with frequent rain in nearly all parts of the country. Until the closing week the wind blew almost persistently from South or South-West, and was often strong to a gale in force. With so decided an equatorial current the weather was usually very mild, both in the daytime and at night, the minimum reading of 60° in London on the nights of the 3rd and 16th being the highest recorded in October for more than 30 years past. After the 25th the wind shifted to North-East, and ultimately to North, and for the remainder of the month the weather was very cold, with sharp frosts between the 28th and 31st, and slight falls of snow in many parts of the country. Between the 26th and 28th the progress of a slow moving depression from the neighbourhood of our south-west coasts to the west of France, and afterwards north eastwards to the Netherlands, was attended by exceptionally heavy falls of rain in the South and South-East of England.

In November the general character of the weather was in striking contrast with that which had hitherto prevailed, the atmosphere being as a rule fair and very dry, with an unusually large amount of bright sunshine. The opening week was mild, but the thermometer afterwards fell decidedly, severe frosts being experienced between the 15th and 17th, and again between the 23rd and 26th. During the former spell the temperatures observed in the western and northern districts were in many places the lowest on record for the month of November. Heavy falls of rain were experienced in the north of Scotland on the 11th and 12th, and in the west of Scotland and some parts of north-western England on the 28th and 29th. Over by far the greater part of England, however, the total rainfall for the month did not amount to as much as an inch, several places reporting an aggregate of less than half an inch, and Bawtry and Lincoln less than a quarter of an inch.

With the exception of a brief period around the middle of the month the weather of December was extremely changeable, with heavy gales from West and North-West on the 3rd, and from South-East on the 21st or 22nd. Sharp frosts occurred between the 6th and 10th, and again between the 20th and 22nd, but over the greater part of England the weather was as a rule mild and open, the highest temperatures being recorded on the 26th or 27th. Snow fell heavily over the northern half of the United Kingdom between the 19th and 21st (more especially over northern and central England), and at various times during the month nearly all districts were visited by more than one heavy downpour of rain. In spite of so much unsettled weather the total duration of bright sunshine was nearly everywhere largely in excess of the average.

For the quarter as a whole the *mean temperature* was above the average in London and in England East, but below it in all other districts, the departure from the normal being, however, nowhere very large. The highest temperatures occurred early in October, mostly between the 2nd and 4th, when the thermometer rose to 65° and upwards in nearly all districts and reached 70° at one or two stations in the north and north-east of England. Other spells of warmth occurred between November 3rd and 6th, and on December 26th or 27th. The lowest temperatures of the quarter occurred very generally between December 20th and 22nd, when the thermometer fell below 15° in many parts of the country, and below 10°

at a few places in the west and north. By screened instruments the lowest readings reported were  $1^{\circ}$  at Garforth,  $3^{\circ}$  at Worksop, and  $7^{\circ}$  at Clongowes Wood (Co. Kildare); on the surface of the grass (or snow-covered ground) the thermometer fell to  $7^{\circ}$  below zero at Worksop, to  $4^{\circ}$  at Balmoral, and to  $7^{\circ}$  at Buxton. During the severe frost which occurred in Ireland and Scotland about the middle of November, the minima in the screen were as low as  $3^{\circ}$  at Balmoral,  $4^{\circ}$  at Crathes, and  $10^{\circ}$  at West Linton.

Over the country generally the rainfall of the quarter was in excess of the average, the number of days affected being also unduly large. In England East the excess amounted to as much as 33 per cent., and in England South-East to 31 per cent. In England North-East, however, the total amount, and in the English Channel the number of rain-days, agreed precisely with the normal. Falls exceeding an inch in 24 hours were numerous, the principal case occurring in the south-east of England between October 26th and 28th. In the course of these three days the total rainfall amounted to 5 inches or more in several parts of Kent and Sussex, and to rather over 6 inches at Kearsney, near Dover. The snow-falls of December 19-21 were heavy in the north, several stations reporting a depth in level places varying between 6 and 8 inches.

The total duration of *bright sunshine* was considerably in excess of the average in most districts, but was a trifle below it in the English Channel. In the second and third weeks of November the amount was in many localities unusually large for the time of year. On the earlier occasion more than half the possible duration was recorded in England East and South-East; while in the following week (ending November 20th) as much as 59 per cent. of the possible duration was recorded in the north of Ireland and 55 per cent. in the south of that country.

### Deaths.

The deaths registered in England and Wales last quarter numbered 127,363, and were in the proportion of 14.1 annually per 1000 persons living; this rate is 1.9 per 1000 below the mean rate in the ten preceding fourth quarters, and is the lowest death-rate recorded in any fourth quarter since the establishment of civil registration. In registration counties with populations exceeding 100,000, the death-rates ranged from 11.2 in Berkshire, 11.4 in Middlesex, 11.5 in Essex, 11.6 in Kent, and 11.8 in Surrey, to 16.1 in Glamorganshire, 16.3 in Staffordshire, 16.4 in Lancashire, 16.7 in Cumberland, 16.9 in Denbighshire, and 18.0 in Carmarthenshire.

The 127,363 registered deaths included 65,355 of males and 62,008 of females, the death-rate among males being 15.0, and that among females 13.3 per 1000 of the estimated populations of the respective sexes. Compared with the average for each sex in the ten preceding fourth quarters, the death-rate of males showed a decrease of 2.0, and that of females a decrease of 1.8. Out of equal numbers living, the deaths of males were to those of females as 113 is to 100; the mean proportion in the fourth quarters of the ten preceding years having been 112 to 100.

### *Urban and Rural Mortality.*

In the 76 great towns, in each of which the population at the census of 1901 exceeded 50,000, and of which the aggregate population in the middle of 1909 is estimated at about sixteen and a half millions, the death-rate calculated without reference to sex and age constitution

of the populations was 14·3 per 1000 living; the rates in the three preceding fourth quarters having been 16·2, 15·4, and 14·8. The crude rates in the several towns ranged from 8·8 in Handsworth (Staffs.), 9·2 in Hornsey, in East Ham, and in Kings Norton, 9·5 in Croydon, and 9·6 in Leyton, to 18·2 in Wigan, 18·6 in Liverpool, 18·9 in Middlesbrough, 19·6 in Oldham, 19·9 in Merthyr Tydfil, 21·2 in Swansea, and 22·4 in Hanley.

In the 143 smaller towns, with populations ranging between 20,000 and 50,000 at the census of 1901, and with an aggregate population estimated at over five millions, the crude death-rate was 13·8 per 1000 living; the rates in the three preceding fourth quarters having been 14·7, 14·2, and 14·0.

In the remainder of England and Wales, with an aggregate population estimated at more than fourteen millions, of whom nearly six and a half millions live in small towns and more than seven and a half millions in rural districts, the crude death-rate was 14·1 per 1000 living; the rates in the three preceding fourth quarters having been 15·1, 14·2, and 14·3.

The crude death-rate, that is the proportion of deaths from all causes to each thousand of the population, is a fairly trustworthy test of relative mortality when the rates for short periods in the same area are compared; but when one area is compared with another, crude death-rates should be supplemented by rates in which the sex and age constitution of the respective populations is taken into account. The following statement shows the crude and corrected death-rates in each of the above areas. (See also Table III. page xvii.)

*December Quarter, 1909.*

— — — — —	Crude Death-rates.	Corrected Death-rates.
England and Wales ... ..	14·1	14·1
76 Great Towns ... ..	14·3	15·2
143 Smaller Towns ... ..	13·8	14·5
England and Wales, less the 219 Towns	14·1	13·2

It should further be stated that owing to the difficulty of distributing to their proper areas the deaths occurring in public Institutions the death-rate in the rural area may possibly be somewhat overstated.

*Mortality at Different Ages.*

Of the 127,363 deaths registered in England and Wales last quarter, 25,672 were those of infants under one year of age, 55,719 those of persons aged between one year and sixty years, and 45,972 those of persons aged sixty years and upwards.

Infantile mortality, measured by the proportion of deaths under one year of age to registered births, was equal to 117 per 1000; this proportion was 23 per 1000 below the average in the ten preceding fourth quarters. Among registration counties with populations exceeding 100,000, the lowest proportions were 67 in Berkshire, 70 in Wiltshire, 71 in Buckinghamshire and in Dorsetshire, and 74 in Hampshire and in Hertfordshire. The highest proportions were 126 in the East and North Ridings of Yorkshire and in Carnarvonshire, 127 in Carmarthenshire, 130 in Glamorganshire, 137 in Northumberland, 149 in Durham, 150 in Lancashire, and 158 in Staffordshire.

In the 76 great towns infantile mortality averaged 128 per 1000 births, being 11 per 1000 above the proportion in England and Wales as a whole. Among the several towns the lowest proportions were 64 in Croydon, 71 in Leyton, 74 in Hornsey, 80 in Hastings, and 81 in Kings Norton; the highest were 187 in Burnley, in Merthyr Tydfil, and in Swansea, 188 in St. Helens, 189 in Oldham, 199 in Wigan, and 202 in Hanley. Among the 143 smaller towns infantile mortality averaged 125 per 1000 births, ranging from 38 in Tunbridge Wells, 48 in Winchester, 49 in Torquay, and 50 in Guildford and in Waterloo with Seaforth, to 241 in Tunstall, 242 in Hindley, 256 in Blyth, 257 in Fenton, and 261 in Chorley. Excluding these 219 towns, infantile mortality in the remainder of England and Wales was in the proportion of 102 per 1000 births.

The mortality in England and Wales among persons aged between one year and sixty years was at the annual rate of 6·9 per 1000 of the estimated population at this group of ages, being 1·2 below the mean rate in the ten preceding fourth quarters. In the 76 great towns the mean mortality at this age-group was 7·2 per 1000, the death-rates ranging from 4·2 in Handsworth (Staffs.), 4·3 in Kings Norton, 4·4 in Hornsey, and 4·5 in Croydon and in East Ham, to 10·0 in Oldham, 10·2 in Middlesbrough and in Merthyr Tydfil, 10·3 in Liverpool, 10·5 in Swansea, and 12·1 in Hanley. In the 143 smaller towns the mortality at this age-group averaged 6·7 per 1000.

Among persons aged sixty years and upwards the mortality was at the annual rate of 68·9 per 1000 of the estimated population at this group of ages; the mean rate in the ten preceding fourth quarters having been 68·0. In the 76 great towns the mean mortality at this age-group was 73·7 per 1000; the lowest rates were 51·4 in Handsworth (Staffs.), 52·7 in Croydon, 53·5 in Devonport, 57·4 in Kings Norton, and 57·6 in Coventry; the highest rates were 96·0 in Rochdale, 96·2 in Blackburn, 97·0 in Wallasey, 98·9 in Hanley, and 100·1 in Oldham. In the 143 smaller towns the rate averaged 71·6 per 1000.

Compared with the mean rates in the ten preceding fourth quarters, the mortality of infants under one year of age showed a decrease of 16·4 per cent., that of persons between one year and sixty years of age a decrease of 14·8 per cent., and that of persons aged sixty years and upwards an increase of 1·3 per cent.

#### *Mortality from certain Epidemic Diseases.*

The 127,363 deaths from all causes include—

2,339	that were attributed to diarrhœa,	
1,721	”	measles,
1,434	”	whooping-cough,
1,361	”	diphtheria,
842	”	scarlet fever,
614	”	“fever,”
7	”	small-pox.

Thus, to the above-mentioned epidemic diseases in the aggregate, 8,318 deaths were referred last quarter, being in the proportion of 0·92 per 1000 of the estimated population, or 0·55 per 1000 below the average proportion in the corresponding quarters of the previous ten years.

The rates of mortality from these diseases were in all cases below the decennial averages.

*Diarrhœa* was the assigned cause of 2,339 deaths last quarter, corresponding to an annual rate of 0·26 per 1000, which is lower by 0·17

per 1000 than the decennial average rate for the fourth quarter of the year. In seven counties no deaths from diarrhoea were registered last quarter. Among counties with populations exceeding 100,000 persons, the highest death-rates were 0·40 in the East Riding of Yorkshire, 0·44 in Glamorganshire, 0·46 in Durham, and 0·51 in Staffordshire. In the 76 great towns the average death-rate from diarrhoea was 0·29 per 1000. The highest death-rates among these towns were 0·72 in South Shields and in Merthyr Tydfil, 0·75 in Great Yarmouth, 0·82 in Hanley, 0·85 in Walsall, and 0·97 in Rhondda. In the 143 smaller towns the average death-rate was 0·29 per 1000 of the population, the mortality being highest in Chesterfield, Bilston, Burslem, Mansfield, and Ince in Makerfield. In the remainder of England and Wales the death-rate from diarrhoea averaged 0·21 per 1000.

*Measles* was returned as the cause of 1,721 deaths last quarter, corresponding to an annual rate of 0·19 per 1000 of the population, or 0·12 per 1000 below the average in the fourth quarters of the preceding ten years. Of the 55 registration counties, nine were free from measles mortality, and the death-rate did not exceed 0·03 per 1000 either in Devonshire, Hampshire, Buckinghamshire, Leicestershire, or Wiltshire. Among counties with populations of more than 100,000, the highest death-rates from this disease per 1000 of the respective populations were 0·57 in Monmouthshire, 0·77 in Oxfordshire, 0·84 in Staffordshire, 1·24 in Denbighshire, and 1·34 in Cumberland. In the 76 great towns measles caused an average mortality of 0·14 per 1000. In twenty-six of these towns no deaths from this disease were registered, and the death-rate did not exceed 0·03 per 1000 in Portsmouth, Birmingham, Tottenham, South Shields, or Gateshead. The highest death-rates were 0·70 in Ipswich, 0·82 in Swansea, 1·07 in Northampton, 1·09 in Birkenhead, and 2·27 in Hanley. In the 143 smaller towns, the average death-rate was 0·24 per 1000 living, the highest mortality among these towns being in Fenton, Oldbury, Ilkeston, Wolstanton United, Bilston, Chorley, and Stoke upon Trent, in which town it caused a rate of 4·07 per 1000. In the remainder of England and Wales the average measles death-rate was 0·23 per 1000.

*Whooping-cough* accounted last quarter for 1,434 deaths, and for a death-rate of 0·16 per 1000 annually, which is below the average rate in the ten previous corresponding quarters by 0·04 per 1000. In six of the counties no deaths from whooping-cough were registered last quarter, and the death-rate did not exceed 0·03 per 1000 either in Northamptonshire or in Denbighshire. Among counties with populations exceeding 100,000, the highest death-rates from this cause were 0·25 in Essex and in Suffolk, 0·31 in Leicestershire, and 0·33 in Glamorganshire. In the 76 great towns whooping-cough caused an average death-rate of 0·18 per 1000 living. No deaths from this disease occurred in nine of these towns, and the death-rate did not exceed 0·05 in Croydon, Portsmouth, Bristol, Willesden, Devonport, Bradford, Sheffield, or Newport (Mon.); but it was equal to 0·41 in Walthamstow, 0·44 in Leicester, 0·51 in Merthyr Tydfil, 0·53 in Sunderland, 0·65 in Swansea, and 0·70 in Ipswich. In the 143 smaller towns the average death-rate from whooping-cough was 0·17 per 1000, the mortality being highest in Farnworth, Coseley, Mountain Ash, Hebburn, Rowley Regis, and Ebbw Vale; the rates in the last two towns being nearly 1·5 per 1000. In the remainder of England and Wales whooping-cough caused an average mortality of 0·13 per 1000 annually.

*Diphtheria* (exclusive of *croup* unless stated to be *membranous*) was returned last quarter as the cause of 1361 deaths, a number corresponding to an annual rate of 0·15 per 1000 living, which is below the average rate in the ten previous corresponding quarters by 0·09 per 1000. In three counties no deaths from this disease occurred last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·25 in Dorsetshire and in the East Riding of Yorkshire, 0·26 in Lincolnshire, and 0·31 in Cambridgeshire. The average death-rate from diphtheria in the 76 great towns was equal to 0·15 per 1000 of their aggregate population. Stockton on Tees was free from diphtheria mortality; and the death-rate did not exceed 0·04 per 1000 in Wolverhampton, in Walsall, in Bolton, or in Rochdale. The highest death-rates were 0·35 in Sunderland, 0·36 in Hull, 0·37 in Burton upon Trent, 0·43 in Halifax, 0·45 in Barrow in Furness, 0·51 in Salford, and 0·82 in Hanley. In the 143 smaller towns the mortality from this disease averaged 0·16 per 1000, the rate being highest in Burslem, Tunstall, Cambridge, Luton, and Lincoln. In the remainder of England and Wales diphtheria caused an average mortality of 0·15 per 1000 living.

*Scarlet fever* accounted last quarter for the deaths of 842 persons, equal to a rate of 0·09 per 1000 living, or 0·04 per 1000 less than the decennial average rate for the fourth quarter. Five of the counties of England and Wales were free from scarlet fever mortality throughout the quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·17 in Cheshire, 0·18 in Monmouthshire, 0·19 in Lancashire, 0·21 in Warwickshire, and 0·26 in Shropshire. In the 76 great towns scarlet fever accounted for an average mortality of 0·11 per 1000 annually. No deaths from this disease were recorded in fifteen of these towns, and the death-rate did not exceed 0·02 per 1000 in Bristol, in Leicester, in Leeds, or in Cardiff. The highest scarlet fever death-rates were 0·27 in Salford, 0·28 in Bolton, 0·31 in Wigan and in Rochdale, 0·38 in Blackburn, and 0·40 in Coventry. In the 143 smaller towns the average death-rate from scarlet fever was 0·09 per 1000 living, the highest mortality being in Stretford, Nelson, Shrewsbury, Glossop, and Chester. In the remainder of England and Wales this disease caused an average death-rate of 0·08 per 1000 living.

“*Fever*” (including the three chief forms—*typhus*, *enteric fever*, and “*pyrexia*” of uncertain origin) was the registered cause of 614 deaths last quarter, equal to an annual death-rate of 0·07 per 1000 of the population, or 0·09 per 1000 less than the average in the fourth quarters of the previous ten years. In nine counties no deaths from fever were returned last quarter. Among counties with populations exceeding 100,000, the highest death-rates were 0·11 in Herefordshire, Shropshire, Lincolnshire, Nottinghamshire, Lancashire, and Durham, and 0·15 in Hampshire and in Carmarthenshire. In the 76 great towns fever caused an average mortality of 0·07 per 1000 annually. In twenty-two of these great towns no deaths from fever occurred, and the death-rate did not exceed 0·02 per 1000 in Croydon, in Leicester, or in Cardiff. The towns with the highest fever death-rates were Grimsby, where the rate was 0·27 per 1000, West Bromwich 0·28, Hanley 0·29, Portsmouth and Bolton 0·30, and Wigan 0·31. In the 143 smaller towns fever caused an average mortality of 0·05 per 1000 annually, the rate being highest in Swinton & Pendlebury, Oldbury, Mansfield, and Taunton. In the remainder of England and Wales the death-rate from fever averaged 0·08 per 1000.

Seven deaths from *small-pox* were registered last quarter in England and Wales. The numbers in the four quarters immediately preceding having been 0, 8, 6, and 0, respectively. Of the 7 deaths last quarter 2 belonged to the Borough of Hull, 1 to London and 1 to Swansea.

#### *Violent Deaths.*

The deaths in England and Wales referred to different forms of violence, either accidental or otherwise, numbered 4,687 last quarter, and corresponded to an annual rate of 0·52 per 1000 of the population, which is 0·06 per 1000 below the average in the ten preceding fourth quarters. In registration counties with populations exceeding 100,000, the lowest death-rates from violence were 0·26 in Berkshire and in Bedfordshire, 0·32 in Middlesex and in Dorsetshire, and 0·33 in Buckinghamshire and in Wiltshire; the highest rates were 0·63 in Lancashire, 0·65 in Durham, 0·66 in Northumberland, 0·74 in Monmouthshire, 0·77 in Carmarthenshire, and 1·04 in Glamorganshire. In the 76 great towns the mean rate was 0·51 per 1000 living; among the several towns the rate was only 0·11 in Handsworth (Staffs.), 0·13 in Norwich, 0·14 in York, 0·15 in Croydon and in Kings Norton, and 0·17 in Bournemouth; but it rose to 0·77 in Merthyr Tydfil, 0·79 in Liverpool, 0·80 in Wigan, 0·84 in St. Helens, 0·86 in Manchester, and 0·93 in Tynemouth.

#### *Certification of Causes of Death.*

Of the 127,363 deaths registered in England and Wales last quarter, the causes of 116,385, or 91·4 per cent., were certified by registered medical practitioners, and the causes of 9,279, or 7·3 per cent., by coroners, after inquest; whilst the causes of the remaining 1,699, or 1·3 per cent., were not certified, the average percentage of uncertified deaths in the ten preceding fourth quarters having been 1·7. Among registration counties with populations exceeding 100,000, the proportion of uncertified deaths was less than 1 per cent. in London, Surrey, Sussex, Hampshire, Middlesex, Oxfordshire, Wiltshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Cheshire, the West and East Ridings of Yorkshire, and Glamorganshire, but it reached 3·0 in Shropshire, 3·1 in Durham, 3·2 in Carmarthenshire, 3·3 in Herefordshire, and 3·4 in Berkshire. In the 76 great towns the mean proportion of uncertified deaths was 0·8 per cent.; but whilst no uncertified deaths were registered in Croydon, Hornsey, Tottenham, East Ham, Leyton, Bournemouth, Southampton, Ipswich, Great Yarmouth, Plymouth, Devonport, Derby, York, Newport (Mon.), Cardiff, or Rhondda, the proportion per cent. rose to 3·2 in Birmingham and in Barrow in Furness, 3·7 in St. Helens, 4·4 in South Shields, 4·5 in Warrington, 4·7 in Gateshead, and 5·8 in Bootle.

#### *Inquests.*

Inquests were held in England and Wales concerning 9,279, or 7·3 per cent., of the total deaths, the mean proportion in the ten preceding fourth quarters having been 6·8 per cent. In the 76 great towns the proportion of inquest cases averaged 8·3 per cent., ranging from 3·0 in Warrington, 3·2 in Kings Norton and in Preston, 3·3 in Gateshead, 3·7 in Reading, and 3·9 in Handsworth (Staffs.), to 10·4 in Leyton, 10·5 in Newcastle on Tyne, 10·9 in Leeds, 12·0 in Derby, 12·4 in Croydon, and 16·0 in Tottenham.

#### *Deaths in Public Institutions.*

The total deaths registered in England and Wales include 25,203, or 19·8 per cent., that occurred either in workhouses, in hospitals,

or in lunatic asylums, the mean proportion of deaths in such institutions in the ten preceding fourth quarters having been 16·9 per cent. In the 76 great towns the deaths in public institutions averaged 26·8 per cent. of the total deaths, the lowest percentages in the several towns being 4·5 in Handsworth (Staffs.), 5·1 in Rhondda, 10·4 in Grimsby, 11·1 in Aston Manor, 11·5 in Barrow in Furness, and 11·7 in Wigan; the highest percentages were 29·4 in Leyton, 29·7 in West Ham, 32·9 in Southampton, 33·0 in Liverpool, and 40·9 in London.

#### EDINBURGH, GLASGOW, DUBLIN, AND BELFAST.

The annual rates of birth and death per 1000 living in these towns last quarter were as follows:—

	Birth-rate.	Death-rate.
Edinburgh ... ..	19·5	14·9
Glasgow ... ..	24·1	20·9
Dublin ... ..	26·6	20·0
Belfast ... ..	26·2	19·0

#### COLONIAL AND FOREIGN CITIES.

The Registrar-General has been favoured with returns of vital statistics by the authorities of 30 of the principal Colonial and Foreign Cities. From these a summary has been constructed for the 13 weeks ended 1st January, 1910 (Table XIII.). Excluding the Indian and Egyptian cities, the highest and lowest annual rates of birth and death during the fourth quarter of 1909 were as follows:—

#### BIRTH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Toronto ... ..	36·3	Brussels ... ..	15·7
Trieste ... ..	31·2	Paris ... ..	17·0
Bucarest ... ..	29·9	Berlin ... ..	19·3
New York ... ..	29·1	Vienna ... ..	19·7
St. Petersburg ... ..	28·8	Prague ... ..	19·8
Breslau ... ..	27·2	Antwerp ... ..	20·0
London ... 23·4			

#### DEATH-RATES.

	Highest per 1000 living.		Lowest per 1000 living.
Bucarest ... ..	27·1	Amsterdam ... ..	12·4
Moscow ... ..	27·0	Copenhagen ... ..	12·6
Trieste ... ..	23·3	Stockholm ... ..	12·7
Toronto ... ..	23·0	Antwerp ... ..	13·1
St. Petersburg ... ..	22·1	Christiania ... ..	13·3
London ... 13·5			

*Small-pox* caused 118 deaths in St. Petersburg, 16 in Moscow, 2 in Budapest, 1 in Paris, 1 in Antwerp, and 1 in New York.

*Asiatic Cholera* caused 316 deaths in St. Petersburg, and 112 in Moscow.

The mortality from *measles* was highest in St. Petersburg, Moscow, and Amsterdam; from *scarlet fever* in Moscow, Bucarest, St. Petersburg, Toronto, and Berlin; from *diphtheria* in Toronto, Moscow, St. Petersburg, and Hamburg; from *whooping-cough* in Breslau, Moscow, and St. Petersburg; from "*fever*" in Bucarest, Toronto, Moscow, Budapest, and New Orleans; and from *diarrhœal diseases* in Moscow, Bucarest, Munich, Breslau, and Antwerp.

*Infantile Mortality*.—Among those European cities for which the figures are available, the proportion of deaths of children under one year of age to 1000 registered births ranged from 60 in Stockholm, 78 in Amsterdam, 89 in Paris, 93 in Christiania, and 99 in Copenhagen, to 183 in Antwerp, 193 in Trieste, 198 in Breslau, 200 in Bucarest, and 202 in Munich. In London the proportion was 116 per 1000 births.

INDIAN CITIES.—The death-rate was equal to 34.1 per 1000 in Madras, 29.3 in Bombay, and 27.3 in Calcutta. *Small-pox* caused 49 deaths in Bombay, 7 in Calcutta, and 5 in Madras; *measles* caused 23 deaths in Madras, 9 in Calcutta, and 3 in Bombay. Under the heading "*fever*" 1,346 deaths were returned in Madras, 1307 in Calcutta, and 782 in Bombay, including 99 deaths from *plague* in Bombay, and 73 in Calcutta. The mortality from *diarrhœal diseases* was excessive in all of these Indian cities; *Asiatic cholera* caused 194 deaths in Calcutta, 41 in Bombay, and 1 in Madras.

#### RETURNS OF NOTIFIED CASES OF INFECTIOUS DISEASE.

At the request of the Local Government Board, and of the London County Council, and on their responsibility with respect to accuracy, tables have been inserted, in continuation of those published in previous returns, showing the numbers of cases of infectious sickness notified, under Act of Parliament, to the Sanitary Authorities of certain of the largest towns in England and Wales, during the 13 weeks ended 1st January, 1910 (*see* pages xxix—xxxiv); and in the two following Tables, these numbers have been reduced to rates per 1000 living in the several populations (*see* pages xxxv—xl).

---

### The Year 1909.

According to the quarterly returns furnished by local registrars, 914,017 births and 517,782 deaths were registered in England and Wales in the year 1909. The natural increase of population, by excess of births over deaths, was therefore 396,235, the average annual increase in the preceding five years having been 404,483.

From a Return issued by the Board of Trade it appears that in the twelve months ended 31st December 1909, the total passenger movement between the United Kingdom and places out of Europe showed a net balance outward of 213,146 passengers, compared with a net balance outward of 43,489 passengers in the previous year.

The net outward balance among British subjects amounted to 139,774 persons. Of these 90,679 were English, 2,085 Welsh, 33,408 Scottish, and 24,473 Irish passengers, whilst there was an inward balance of 10,871 British Colonial passengers. Compared with the numbers in

the previous year the net outward balance of English passengers showed an increase of 35·7 per cent., that of Welsh an increase of 48·0 per cent., that of Scottish an increase of 74·6 per cent., and that of Irish an increase of 58·2 per cent., whilst the net inward balance of British Colonial passengers showed a decrease of 6·8 per cent.

Among foreign passengers there was a net balance outward of 73,372, against a net balance inward of 47,667 in the previous year.

The birth-rate in England and Wales in 1909 was 25·6 per 1000 of the population, which is 0·9 per 1000 below the rate in 1908, and lower than the rate in any other year on record. Compared with the average in the ten years 1899–1908, the birth-rate in 1909 showed a decrease of 2·2 per 1000.

The death-rate in 1909 was 14·5 per 1000, which was 0·2 per 1000 below the rate in 1908, and lower than the rate in any other year on record; compared with the average rate in the ten years 1899–1908, the death-rate in 1909 showed a decrease of 1·6 per 1000.

The 517,782 deaths registered in 1909 included 99,511 of infants under one year of age, 231,681 of persons aged between one year and 60 years, and 186,590 of persons aged 60 years and upwards. The rate of mortality among infants under one year of age to 1000 registered births was 109, which is 11 per 1000 below the rate in 1908. The rate in 1909 was lower than in any other year on record. Compared with the average in the ten years 1899–1908, the rate of infantile mortality in 1909 showed a decrease of 29 per 1000. The death-rate among persons aged between one year and 60 years was 7·2, and that among persons aged 60 years and upwards was 70·5, per 1000 of the estimated populations at the respective groups of ages.

The total deaths registered included 12,448 from measles, 10,081 from diarrhoea, 6,980 from whooping-cough, 5,159 from diphtheria, 3,168 from scarlet fever, 2,151 from “fever” (including the three principal forms, *typhus*, *enteric fever*, and *pyrexia* of uncertain origin), and 21 from small-pox. Thus 40,008 deaths were attributed to these epidemic diseases, corresponding to a rate of 1·12 per 1000 living, against 1·77, 1·28, and 1·34 respectively in the three preceding years.

**Birth-rate, Death-rate, and Analysis of Mortality during the year 1909.**

\* The Corrected Death-rates represent the Crude Death-rates in Col. 2 multiplied by the respective Factors for Correction for differences of sex and age constitution of population. For construction and use of these Factors see Annual Summary 1908, pp. x–xiii. Owing to the difficulty of distributing to their proper areas deaths occurring in public institutions the Death-rate in the Rural area may possibly be somewhat overstated.

To different forms of violence 19,167 deaths were referred, being in the proportion of 0·54 per 1000 of the population, against 0·57, 0·56, and 0·57 per 1000 in the three preceding years.

The 517,782 deaths included 36,350 cases, or 7·0 per cent., in which inquests were held; and 6,987 cases, or 1·3 per cent., in which the causes were not certified either by registered medical practitioners or by coroners.

The foregoing statistics for the year 1909, having been derived from returns furnished quarterly by the local registrars, are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Seventy-second Annual Report, which is now in course of preparation.

TABLE V.—76 Great Towns.—Population; Births, Deaths, and Meteorology in the 13 Weeks ended 1st January, 1910.

NOTE.—The 76 Great Towns are those with populations exceeding 50,000 persons at the Census of 1901. The deaths in London have been corrected as far as possible (1) by excluding deaths of all non-Londoners, and (2) by including the deaths of Londoners occurring in Metropolitan Public Institutions situated outside the County. (See Table XII.) The deaths in the other Towns have been corrected, as far as possible, for deaths occurring in Public Institutions; while in addition the deaths occurring in London of all persons known to belong to the Metropolitan Outer Ring have been credited to the respective areas to which they belong.

TOWNS.	ESTIMATED POPULATION in the middle of 1909.	BIRTHS.	DEATHS.	The Deaths registered include																	MEAN TEMPERATURE (Degrees Fahr.).	RAIN-FALL (inches).	TOWNS.

TABLE VII.—One hundred and forty-three Smaller Towns.—Population; Births and Deaths in the QUARTER ended 31st December, 1909.

NOTE.—The 143 Smaller Towns are those with populations of 20,000 or less, but not exceeding 50,000 at the Census of 1901. The deaths in these towns have been corrected for deaths occurring in Public Institutions, while in addition the deaths occurring in London of all persons known to belong to towns in the Metropolitan Outer Ring have been credited to those towns.

The Registration Districts, 634 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

<sup>a</sup> See page 2, note.<sup>b</sup>

<sup>b</sup> For London the births and deaths given for the quarter are derived from the Weekly Returns made by the Registrars.

## II.—SOUTH EASTERN COUNTIES.—REGISTRATION DISTRICTS.

Registration Districts.	Area in Statute Acres.	Enumerated Population, 1901.	Marriages Registered in Quarter ended 30 Sept. 1909.	Births Registered in Quarter ended 31 Dec. 1909.	Deaths		The DEATHS in the Quarter are stated by the Registrars to include														
					Average in Quarters ended 31 Dec. in the 3 Years 1906-08.	Registered in Quarter ended 31 Dec. 1909.	Deaths of		Deaths from										Inquest Cases.	Deaths in Public Institutions.	Uncertified Causes of Death.
							Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Violence.

\* The Registration Sub-districts (2015 in number) are sub-divisions of the Registration Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; w indicates a Workhouse belonging wholly or partly to other Districts than that in which it stands; F a Hospital for Infectious Diseases; H a Mother Hospital; and L a Lunatic Asylum. When a sub-district contains more than one institution of either kind, the number is indicated by a figure prefixed to the letter.

b See page 2, note b.

# METEOROLOGY.

---

REMARKS ON THE WEATHER OVER THE UNITED KINGDOM DURING  
THE QUARTER ENDED DECEMBER 31ST, 1909.

EXTRACTED FROM THE  
MONTHLY WEATHER REPORTS  
OF THE  
METEOROLOGICAL OFFICE

BASED ON OBSERVATIONS AT 209 STATIONS,  
TOGETHER WITH TABLES OF METEOROLOGICAL DATA AT 56  
STATIONS IN ENGLAND AND WALES, AND THE ENGLISH CHANNEL.

---

## OCTOBER, 1909.

**Pressure, Winds and Weather.**—Since 1903 the British Isles have not experienced such an exceedingly unsettled October as the one now under review. Between the atmospheric conditions of October, 1908, and those of October, 1909, the contrast is very striking. October, 1909, witnessed the culmination of the unusually long spell of inclement weather which set in over the country so far back as the beginning of June. Throughout October the distribution of pressure was of a disturbed type; on every day the weather was under the influence of one or more low pressure systems. For rather more than the first three weeks, however, these depressions were found either on the Atlantic or working across to the Norwegian coast, so that this period was very mild and open, with an almost uninterrupted Southerly to Westerly wind. With the closing week came a totally different type, one of the Atlantic disturbances striking off to the south-east, past the mouth of the English Channel to the upper part of the Bay of Biscay, then curving to the north-eastward and passing to the eastern side of the North Sea and up across Norway. This movement was coincident with the very slow advance of an anticyclonic area from Northern Greenland across Iceland, its central space arriving over Scotland and northern Ireland on the evening of the 31st, when southern England was still affected by a depression centred over western France. With the wind largely from Northerly to Easterly points the last week proved very cold. In the only anticyclone which visited the country during the month, the barometer rose to 30·35 ins. at Aberdeen and Donaghadee late in the night of the 31st, but Jersey, on the northern edges of continental anticyclones, had registered 30·34 ins. on the 9th, and 30·35 ins. on the 22nd. Some of the disturbances were of considerable depth. On the afternoon of the 5th, when the centre of a depression was passing northward outside the Hebrides, the barometer fell to 28·63 ins. at Stornoway; in a similar case off the Irish coast on the 7th, Blacksod Point registered 28·89 ins. and on the 14th Stornoway 28·76 ins. The cyclonic system which branched off on the more southern route was not so deep, the barometer sinking to 29 ins. at Scilly on the 26th. It will be seen that the range of pressure was greatest over the northern and western districts, amounting to 1·5 in. or more at Aberdeen and some other stations, 1·7 in. at Stornoway. Over eastern and south-eastern England it was less than an inch. For the whole month the mean results were everywhere below the average, by 0·09 in. at Jersey, Dungeness and Yarmouth, but by as much as 0·25 in. at Blacksod Point.

From 29·84 ins. at Jersey the values diminished northward to 29·51 ins. at Sumburgh Head, 29·44 ins. at Thorshavn (Farøe), and 29·43 ins. at Reykjavik (Iceland). The general distribution was of a well-marked South-Westerly type, but the gradient was nearly double the normal. From this it may be inferred that the period was of a boisterous character. At the telegraphic reporting stations there were only two days, the first and the last, on which the wind did not exceed the force of a strong breeze; on twenty-one days the force of a gale was attained, and on twelve of these it was a strong or whole gale at one or more stations.

With the deepest disturbance of the month, that of the 5th, Malin Head alone experienced a strong Westerly gale. On the morning of the 7th, a depression which had been advancing from mid-Atlantic, appeared off Ireland, with a secondary disturbance in its rear, in about 30° W. The primary system travelled rapidly northward and disappeared next day beyond the Arctic Circle, having occasioned a strong Southerly gale at Roche's Point, Pembroke and Portland Bill, a whole South-Westerly gale at Malin Head. At Roche's Point the anemometer registered a mean hourly velocity of 52 miles, with gusts at the rate of 63 miles an hour; at Pendennis Castle an hourly velocity of 56 miles, with gusts of 67 miles. The secondary, assuming the "V"-shape formation, moved eastward across these islands on the 8th, resulting in a strong South-Westerly gale at Blacksod Point, North-Westerly at Roche's Point, and South-Easterly at Castlebay, while Malin Head had a whole gale South. Gusts at the rate of 61 miles an hour were recorded at Roche's Point, and of 64 miles at Pendennis Castle. Next day the disturbance dispersed on the Baltic.

Wireless reports from steamers showed that on the morning of the 8th there was a large low pressure system in about 52° N., 38° W. Its progress, however, was exceedingly slow, practically stationary to the southward of Iceland for several days, and it was not until the 16th that its centre passed to the eastward of the Farøe. Our weather was thus under its influence for more than a week, with gale force daily from the 9th to the 15th, strong South-Westerly at Malin Head on the 9th, at Blacksod Point on the 12th, Southerly at Sumburgh Head on the 14th, South-Westerly at Stornoway, Castlebay and Portland Bill on the 15th, and a whole South-Westerly gale at Malin Head, Blacksod Point and Nottingham on the 14th, and again at Malin Head next day. In gusts Pendennis Castle registered at the rate of 64 miles an hour on the 13th, and Holyhead 60, and Aberdeen 63 miles an hour on the 14th.

While continuing very disturbed, there was rather less wind down to the close of the 22nd, only Stornoway reporting a strong South-Western gale on the 20th, and Holyhead a gust at the rate of 60 miles an hour on the 21st.

On the morning of the 23rd a depression, secondary to a large one beyond Shetland appears to have formed off the West of Ireland. Moving north-eastward across the country at a moderate rate it caused a strong South-Westerly gale at Jersey, North-Westerly at Holyhead, and a whole South-Westerly gale at Pembroke and Portland Bill on the 23rd, and a strong North-Westerly gale at Holyhead and Portland Bill on the 24th. At Scilly, on the 23rd, the anemometer registered a mean hourly velocity of 70 miles, while in terrific gusts the velocity was at the rate of 90 miles an hour, the direction veering from South-West to West-North-West. Pendennis Castle had 55 miles an hour, with gusts of 73 miles; Roche's Point and Plymouth had gusts of 66, and Brighton 61 miles per hour. On the 24th Fleetwood registered 50 miles of Westerly wind in an hour, and Southport gusts of 60 miles per hour.

Towards the end of the month, during the progress of a disturbance from the Bay of Biscay to the North Sea, a strong North-Easterly gale was felt at Spurn Head on the 28th, and from North at Dungeness on the 29th, the Dover anemometer registering gusts of 61 miles per hour.

Even more remarkable than the numerous gales were the very frequent heavy rainstorms of this unsettled weather. On at least 23 days the rain records disclose falls of an inch and over at one or more stations. In the early days the largest falls were 1·8 in. at Laudale on the 7th, and 1·6 in. at Sheepstor (Dartmoor) on the 10th. Wales and north-western England had falls ranging up to 1·8 in. at Aspatria on the 12th, the storm passing to Scotland next day. On the 14th large quantities fell in Ireland, Wales and Scotland, up to 2 ins. at Kinlochewe (Ross). South-western England was visited on the 15th, when Arlington registered 2½ ins. Dumfries had 1·6 in. on the 17th, and on the 19th various parts of Ireland, North Wales and the north-west of England were again the scenes of heavy downpours, up to 1·8 in. at Graythwaite (N. Lancs.). On the next two days various places in western Scotland, and on the 22nd many Irish districts exceeded an inch. The 23rd was marked by numerous instances distributed over Ireland, Wales, north-western England and southern Scotland, up to 1·7 in. at Graythwaite. After a few local falls on the 24th and 25th a tremendous rainstorm burst over the south-east quarter of England and across to the Forest of Dean and Monmouthshire, on the 26th. Scores of stations

within this limited area registered more than an inch, a considerable number 2 ins. and upwards, to 3 ins. at Heathfield (Sussex) and 3·3 ins. to 3·6 ins. at Brighton. The storm eased somewhat on the 27th, when Margate had 1·1 in., Canterbury 1·3 in. and Broadstairs 1·6 in., but on the 28th it renewed its intensity, and large falls were again general between Jersey and the Thames Estuary, several stations returning more than 2 ins., 2½ ins. at Broadstairs and Sandgate, 2·9 ins. at Margate, and 3 ins. at Kearsney (Kent). In the three days, 26th to 28th, Brighton received 5 ins., Sandgate 5·1 ins., Margate 5·5 ins., Broadstairs 5·8 ins., and Kearsney 6·04 ins. Only a few scattered thunderstorms were experienced, principally on the 12th, 13th and 21st.

During the very mild period from the 1st to about the 23rd, the day temperatures were generally above 60°, as high as 70° at Bawtry and Clongowes Wood on the 2nd, and at Scarborough and Whitby on the 4th. High night minima were also frequent, up to 60° at Bognor, Brighton, Portsmouth, Sandown, Weymouth and in London in the night of the 3rd and again in London in the night of the 16th. The remainder of the month was marked by sharp cold, and on the 29th snow fell as far south as the Isle of Wight. Towards the close, afternoon maximum temperature of 40° and under were registered, as low as 35° at Glasgow on the 31st. Rather severe frosts were also experienced, a shade minimum of 18° occurring at Balmoral on the 28th and at Garforth on the 31st, and on the latter date the minimum at Llangammarch Wells went down to 16°.

Aurora was observed on several nights in various places. At about 9.30 a.m. on the 6th a remarkable meteor, "pear shaped, with two or three tails," was seen in the southern and midland counties, travelling from south to north.

Fog was prevalent on the western Channels, along southern Ireland, and on the north-east coast of Britain from the 1st to the 3rd.

There was a general decrease in the temperature of the sea water round our coasts, by as much as 4° to 6° in places. Nearly everywhere the water was warmer than the air on shore, by from 3° to 5° in several localities.

**Rainfall.**—The month's precipitation was exceptional. Even in the normally drier districts in the south and east there were numerous aggregates exceeding 7 ins., up to 9·2 ins. at Kearsney, 9·4 ins. at Southampton, and 9·9 ins. at Watergate. In the western half of the kingdom many stations had more than 10 ins., up to 19·2 ins. at Treherbert, 21·1 ins. at Seathwaite, 30·5 ins. at the Stye. Llyn Llydow, Snowdon, is credited with a fall of 56·5 ins. In the north-east of England Seaham had only 2 ins., and Whitby 1·7 in. Numbers of places had from 25 to 29 days with rain, Killarney 30, Foynes, Stornoway and Sumburgh Head 31.

**Bright Sunshine.**—The records of sunshine were very variable, from an excess of 23 hours at Edinburgh to a loss of 32 hours at Jersey, and of 33 hours at Brighton. The largest totals were 125 hours at Ballinacurra, and 122 hours at Nairn (39 per cent. of the possible duration); the smallest, 59 hours (19 per cent.) at Glasgow and 53 hours (17 per cent.) at Kilmarnock.

## NOVEMBER, 1909.

**Pressure, Winds and Weather.**—Following the windy and exceptionally wet weather, which prevailed throughout October, the conditions experienced over the country generally during November were of an unusually fine, bright and dry type for the time of year. This change was associated with the frequent existence over or in the immediate neighbourhood of the British Isles of areas of high atmospheric pressure, so that the paths of most of the cyclonic systems of the month were at considerable distances from our shores. Several disturbances kept to the north of Iceland, while others moved eastward across the Spanish Peninsula towards the Mediterranean, South-Eastern Europe and Asia Minor. The improvement was noticeable on the opening day of the month. Through the first eleven days an anticyclonic pressure distribution was the dominant feature, the barometer descending below 30 ins. on some days only at northern stations, while on several days it was between 30·3 ins. and 30·5 ins. in the south and west. After a brief interval of unsettled conditions, the barometer falling to 28·74 ins. at Aberdeen late in the

evening of the 12th, another period of high pressure set in on the 15th, and continued until the 25th, the barometer rising to its highest level for the month on the 24th, when it exceeded 30·5 ins. in Ireland and the south-west of England, reaching 30·59 ins. at Roche's Point. During the last five days of the month the type gradually became more and more disturbed, and in the night of the 29th-30th the central space of a very deep cyclonic system moved across the north of Scotland, the barometer descending below 29·5 ins. over the entire kingdom, below 29 ins. over Scotland and the north of England and of Ireland, and touching 28·62 ins. at Stornoway. The range of pressure was thus greatest in the Hebrides, where it amounted to 1·8 in., exceeding 1·5 in. over the northern half of the country, and diminishing southward to an inch on the Straits of Dover. For the whole month the mean distribution of pressure differed from the normal; the region of highest barometer, instead of being on the Continent, was found over the Atlantic, beyond our south-western coasts. The values ranged from 30·1 ins. in the south of Ireland to 29·82 ins. at Sumburgh Head, continuing to diminish northward to below 29·75 ins. in Iceland, and below 29·7 ins. at Bodø, in northern Norway. At all stations the results were above the average, by 0·06 in. at Dungeness, 0·07 in. at Sumburgh Head, 0·19 in. at Valencia and Roche's Point, and 0·2 in. at Blacksod Point. The gradient did not differ materially from the normal but while in the main favourable to winds from between South-West and North-West, there was a considerable Easterly tendency over the southern districts, as indicated by the position of the mean highest pressure. Notwithstanding the general prevalence of a high barometer, however, the wind was often very brisk, exceeding the force of a strong breeze at one or more of the telegraphic reporting stations on numerous days.

Under the influence of a depression moving eastward along the Arctic Circle a Westerly gale was experienced in the extreme north of Scotland on the 9th and 10th, a strong gale at Malin Head and at Wick. At Loch Awe and Glencarron the rainfall on the 9th exceeded an inch. On the 11th a disturbance appeared to the southward of Iceland, and moving on a south-easterly course crossed the north of Scotland, and by the morning of the 13th it was over Kiel Bay, subsequently disappearing over northern Russia. It was the second deepest depression of the month in these islands, but the gale by which it was accompanied was the most extensively felt. Both on the 12th and the 13th the force of a gale was attained in many districts, a strong North-Westerly gale at Malin Head and Nottingham, a whole Westerly gale at Spurn Head. According to the anemometrical records a mean hourly velocity of 52 miles, from North-East, was registered at Deerness, and of 55 miles, from West, at Fleetwood, while in gusts a velocity at the rate of 62 miles per hour occurred at Southport, 66 miles per hour at Alnwick Castle, and 70 miles per hour at Aberdeen. During the progress of the disturbance rain fell heavily in the north of Scotland, where amounts of an inch and upwards were measured at several stations on the 11th and the 12th, on the former date as much as 2·1 ins. at Sandside (Caithness) and at Wick. A thunderstorm occurred at Fort William. Snow fell in many parts of the kingdom, but in no great depth, the largest fall, 6 ins., occurring at Crathes on the morning of the 13th, and 2 ins. at Kinlochewe.

A small shallow depression which appeared over Galway Bay on the evening of the 13th, and moved slowly south-eastward to northern France, caused very little wind, but it produced most disagreeable weather—cold, with showers of rain, hail, sleet and snow over a wide area.

By the middle of the month a deep cyclonic system had reached the Azores from the western Atlantic, and on the 15th the barometer stood below 28·9 ins. at Horta. Until the 21st the system appears to have remained stationary between the Azores and Portugal. In the night of the 17th, however, a small secondary became detached from the main system, and passed across northern Spain to the Mediterranean. A decided increase in the force of the East wind took place on its northern side; on the 18th at Jersey and Portland Bill there was a strong gale and at Pendennis Castle a mean hourly velocity of 56 miles was attained, with gusts at the hourly rate of 75 miles per hour.

After this the conditions were very quiet for several days, also very dry between the 13th and 26th, rainless in many places on from twelve to fourteen days, only one or two trifling showers in other places. Wireless reports from the Atlantic showed that on the 21st the depression lying westward of Portugal began to travel slowly in a north-westerly course across the ocean. Curving round to northward and eastward it was in the neighbourhood of Iceland on the 25th, and began to affect our western coasts next day. Continuing to advance very slowly, its centre did not pass to the eastward of Shetland until the evening of the 30th. The influence of the system extended to practically all parts of western and north-western Europe, but as a rule the Southerly to South-Westerly wind blew with no greater force than that of a strong or high wind over the British Isles. It touched

gale force at Stornoway on the 27th and 29th, at Dungeness on the 30th, a strong gale at Sumburgh Head on the 28th and 29th, and at Malin Head on the 30th. The weather, on the other hand, was the wettest and the most disturbed of the month. Thunderstorms occurred in several districts, mainly on the 27th and 29th, and over the country generally rain fell in considerable quantities. Daily from the 26th to the 30th there were records of more than an inch, most of the instances being in Scotland, the largest amounts returned being 1·6 in. at Glencarron and 2·7 ins. at Fort William.

Many of the observers describe the month as characterised by severe frosts, remarkable abundance of bright sunshine, and an unusual freedom from fog. There were very few occasions when the temperature stood above its normal level, the 3rd being an exceptional day, the thermometer rising to 60° and above at a number of stations in Ireland and in northern Britain, to 62° at Balruddery and Newcastle-on-Tyne. In the night of the 3rd temperature remained as high as 53° at Guernsey, and Newquay, and 54° at Penzance, and above 50° at numerous stations, as far north as Strathpeffer, between the 2nd and 4th. Day maxima below 50° were, however, of common occurrence, while at times frosts of excessive severity were experienced. On the 1st Balmoral registered a minimum shade temperature of 16°, West Linton 17°, and Thorntonhall 19°; on the 8th Balmoral and West Linton 18°: but on the 15th intense cold was spreading over the northern and western districts, and next day the thermometer dropped to 3° (0° on the grass) at Balmoral, 10° at West Linton, 11° at Crathes, and 13° at Kilnarnock and Markree Castle, while the afternoon maximum was only 26° at Glasgow and 28° at Balmoral. On the 17th the minimum was 4° at Crathes (−5° on the grass) and Balmoral, and the maximum 25° at Balmoral and Glasgow, 26° at Aberdeen, the frost continuing unbroken in several places during three days. Until the 24th there were numerous shade minima below 20° in Scotland, Ireland and Wales.

Fog was rather prevalent on many parts of the Irish coast during the first three days, and on the English Channel in the first nine days, but the western and southern coasts were but rarely affected afterwards. On the east of Britain fog reports were fairly numerous from the 1st to the 9th, 14th to 20th, and 23rd to 27th. Land fogs were rare for the season.

There was a decided decrease in the temperature of the sea water along our coasts, the fall since October amounting to 8° or 9° in some localities, 10° at Margate. Notwithstanding this the water was warmer than the air on shore by 7° or 8° in many neighbourhoods, 10° off Spithead.

Aurora was seen at Balta Sound on the 7th, 20th, 21st and 30th.

**Rainfall.**—Other than at a few places in the north of Scotland the month's precipitation was everywhere below the average, and as a rule considerably so, the deficiency in several cases exceeding 3 ins., 3·6 ins. at Douglas, 3·7 ins. at Killarney and 3·9 ins. at Roche's Point. Aggregates above 5 ins. were not numerous; they were confined to the north-west of Scotland, the Highlands of North Wales, and the extreme west of Donegal. The limit 10 inches was exceeded at a few stations in the north-west of Scotland. Totals below an inch were very common, several stations returning less than  $\frac{1}{2}$  in., the figures ranging downwards to less than  $\frac{1}{4}$  in. at Bawtry and Lincoln. Over a great part of the kingdom precipitation was registered on fewer than 10 days, on 6 days at Dundee, Temple Bruer, Southend, Tottenham, Marlborough and Southampton, on 4 days at Cuckfield, and on 3 days at Ampleforth, but at Stornoway on 27, and at Sumburgh Head on 30 days.

**Bright Sunshine.**—In all districts the duration of bright sunshine was largely in excess of the normal, by 61 hours at Plymouth, and 62 hours at Ventnor (more than 2 hours of excess per day). The largest totals were 138 hours (52 per cent. of the possible) at Bognor, 131 hours (50 per cent.) at Worthing, and 130 hours (49 per cent.) at Ventnor; the smallest, 24 hours (11 per cent.) at Balta Sound, 18 hours and 17 hours respectively (7 per cent.) at the two stations in Manchester.

## DECEMBER, 1909.

**Pressure, Winds and Weather.**—The closing month of the year was characterised by very variable atmospheric conditions over the United Kingdom, the distribution of pressure during the greater part of the period being of an exceed-

ingly disturbed type, at times producing severe gales, heavy rain or snow, and rapid fluctuations of temperature. This unstable type was associated with the appearance over or in the immediate neighbourhood of these islands of a number of very deep cyclonic systems, in nearly all of which the barometer fell below 29 ins. Throughout the first seven days the conditions were entirely cyclonic, with the barometer below 29 ins. on six days, the lowest reading for the month, and for the whole of the year 1909, being registered at Spurn Head on the morning of the 3rd, when the instrument dropped to the very low level of 28·03 ins. On several occasions two of these deep pressure minima were found over different parts of the country at the same time. From the 8th to the 10th anticyclonic conditions prevailed over the southern districts, the barometer mounting to 30·48 ins. at Jersey on the 9th, the high pressure system being mainly on the Continent. A cyclonic system which occupied the whole country on the 11th quickly passed back to the upper region of the Atlantic, and an anticyclone which had hitherto been over Russia spread westward very rapidly, so that already on the 12th it embraced the whole of the British Isles and the greater portion of the Continent. Only in the south of England and of Ireland, did the barometer fail to pass above 30·5 ins., exceeding 30·6 ins. in the northern districts, and on the evening of the 14th it touched 30·73 ins. at Aberdeen, or 2·7 ins. higher than the Spurn Head minimum on the 3rd. The maximum pressure in the system, a little above 30·8 ins., was attained on the 13th and 14th, between Christiania and Moscow. This anticyclonic interval over these islands was of brief duration. It came to an end on the 16th; thenceforward until the 28th the conditions were again wholly cyclonic, and on several days pressure descended below 29 ins. at various stations, sinking to 28·55 ins. at Blacksod Point on the morning of the 22nd. The last three days of the month were marked by cyclonic conditions in the north, and anticyclonic in the south, the barometer on the 30th ascending, for the second time, to 30·48 ins. at Jersey.

There was thus a very decided preponderance of low pressure conditions during the month, and the mean results show that the values were everywhere considerably below the average, the deficiency ranging from 0·18 in. at Stornoway to 0·29 in. at Nottingham and Spurn Head. The range of pressure was greater than in any previous month for a long time past, amounting to 1·6 in. at Jersey and Scilly, and exceeding 2 ins. at more than half the stations, up to 2·55 ins. at Shields. The distribution of the mean pressure for the month did not differ appreciably from the average. In consequence of the number of depressions that passed directly across the country from west to east the winds varied greatly in direction, but those in the western half of the compass predominated. The force exceeded that of a strong breeze at one or more of the telegraphic reporting stations on twenty-six days, and attained gale force on seventeen days, there being a number of instances of a strong or whole gale.

During the very disturbed week at the commencement of the month the weather was influenced by as many as six very deep depressions, so that the period was of an exceedingly wet, boisterous character. A disturbance which appeared off our north-western coast on the opening day occasioned Westerly high winds and gales over the southern half of the Kingdom, a strong gale at Jersey, the anemometers disclosing hourly wind-paths of 50 miles at Holyhead, and 56 miles at Scilly, while in sharp gusts Shoeburyness reached a rate of 63 miles per hour, Roches Point 65 miles per hour, and Holyhead and Scilly 66 miles per hour. This system, however, travelled away rapidly across North Germany, and on the morning of the 2nd there were indications of the approach of another towards the Irish coast, which quickly developed into the deepest cyclonic area which visited our coasts during the year. By the evening of the 2nd its centre, with the barometer a little above 28·5 ins., was over Galway, but next morning it was out on the North Sea, off the coast of Yorkshire, with pressure down to 28 ins. The rate of translation in the interval was more than 30 miles an hour, then slowing down the system dispersed over Southern Norway on the 5th. Its passage across the British Isles was marked by a South-Westerly to Westerly and North-Westerly gale, which was general over Ireland and England, the force of a strong gale being felt at Malin Head, Roche's Point, Liverpool, Holyhead and Dover, a whole gale at Pembroke, Scilly, Portland Bill, Dungeness, Skegness, Spurn Head, Nottingham and in London. At Scilly the greatest hourly travel of the wind was 54 miles, while in gusts a rate of 62 miles per hour was registered at Southport, 73 miles at Roche's Point, and 75 miles at Scilly and Pendennis Castle. Copious rain fell over the Kingdom generally, and in Ireland, Wales and the north of England there were numerous records of an inch and upwards on the 2nd, ranging up to 1·5 in. at Giggleswick and Prestwich, and 1·6 in. at Pant-yr-Eos (Mon.) and Bettws-y-Coed. There was snow locally, and at West Linton on the morning of the 3rd it was from 4 ins. to 10 ins. deep.

Two depressions which appeared respectively on the 4th and the 5th near the

Bristol Channel, and subsequently passed across the North Sea, produced much less wind and rain, although a strong South-Westerly gale was felt at Jersey, Dungeness and Nottingham, and a few scattered stations had a little over an inch of rain. Snow was experienced in several localities, but not in any large quantity, Uldale (Cumberland) reporting, however, 6 ins. on the 6th.

On the 9th there was a low pressure minimum over Iceland, and Atlantic wireless reports showed another in about 50° N., 40° W. Both systems were moving on easterly paths, the former passing away across Northern Scandinavia, the latter reaching the Irish coast on the 11th, and then returning to the Ocean. They caused high South-Westerly winds in some neighbourhoods, but only Stornoway and Malin Head attained gale force. The feature of the disturbances was the heavy rain they produced, the largest quantities registered being : on the 9th, 2·3 ins. at Oban, 2·5 ins. at Fort William and Kinlochewe, 2·7 ins. at Ford (Argyll), 2·9 ins. at Laudale, and 3·7 ins. at Cruachan ; on the 10th 1·9 in. at Lancaster, 2 ins. at Port Talbot and Kirkby Lonsdale, and 2·5 ins. at Graythwaite ; and on the 11th 1·7 in. at Arlington, and 2·1 ins. at Stonehaven. With a fall of  $\frac{3}{4}$  in. in the night of the 9th, a flood occurred at Uldale.

Following this the country had a few days of very much quieter conditions, but on the 16th the north-eastern spur of a very deep cyclonic system centred near the Azores arrived near the mouth of the English Channel, bringing very heavy rain to the southern and south-western districts, the falls ranging up to 1·6 in. at Abersychan and Newport, and 2·1 ins. at Portland Bill. As the depression passed up the Channel next day, the rain continued, more than an inch falling in the Forest of Dean region.

The unsettled weather was maintained for the rest of the month. The disturbance near Blacksod Point on the 22nd was centred out on the Atlantic, and from the 20th to the 26th it moved in a north-easterly course from the Azores to the north coast of Norway. It caused South-Easterly gales on our coasts on the 21st and 22nd, a strong gale at Roche's Point, Donaghadee, Portland Bill, Yarmouth and Nottingham, a whole gale at Malin Head, Pembroke and Spurn Head, the velocity in gusts rising to 65 miles per hour at Roche's Point, and to 60 miles at Gorleston per hour. Very heavy rains were again experienced, up to 2 ins. at Worcester Lodge (Forest of Dean) and Torquay, and 2·1 ins. at Newchurch (Mon.), Pant-yr-Eos and Burrator. In many places there was heavy snow, which lay from 4 ins. to 8 ins. deep. Subsequently, although Malin Head had a whole South-Westerly gale from the 24th to the 26th, there was less wind, but on several days there were records of more than an inch of rain.

Under these ever changing conditions temperature varied greatly, the day readings sometimes as high as 55°, up to 58° at Torquay on the 3rd and Kingstown on the 27th, and 59° at Kingstown on the 10th ; at other times they were below the freezing point, 23° at West Linton, 24° at Fort William on the 7th, and 26° at Fort Augustus on the 19th. Similarly with the night minima, numbers of instances were below 20°, down to 0° at Balmoral on the 7th, and 1° at Garforth on the 22nd, while readings above 47° were very numerous, 52° at Dublin, Glasnevin and Markree Castle in the night of the 9th-10th.

There was comparative freedom from fog inland, but on the western and eastern coasts it was frequently reported, and especially on the 11th and 22nd in the west. On the English Channel there were few records, most of them towards the close of the month.

The temperature of the sea water round our coasts was lower than in November, to the extent of 5° to 6° in several places, but the water was everywhere warmer than the air on shore, by 5° to 7° in a number of instances, and 8° at Stornoway.

Brilliant Aurora was witnessed at many northern stations on the 14th, and on various other dates there were less marked local displays.

**Rainfall.**—Over northern Scotland there was a deficiency of precipitation up to as much as 4·2 ins. at Glencarron, and in southern Ireland the distribution was very irregular, from an excess of 2·2 ins. in Dublin (City) to a deficiency of 2 ins. at Killarney. All other districts returned an excess, of more than 2 ins. in numerous cases, ranging up to 4·9 ins. at Buxton. Only Nairn had an aggregate total of less than 2 ins., the amounts generally being large, ranging up to 9 ins. at Swansea and Lickeen, 9·6 ins. at Sheepstor (Dartmoor), 10 ins. at Buxton, 10·5 ins. at Cruachan, 10·7 ins. at Pant-yr-Eos, 10·8 ins. at Inverary, 10·9 ins. at Graythwaite, 16·2 ins. at Plynlimon, 17·1 ins. at Treherbert, and 18·9 ins. at Seathwaite. As a rule there

were more than 20 days on which precipitation was measured, 28 at Llandrindod Wells and Huddersfield, but at Kilmarnock only on 11, and Ampleforth, Gordon Castle, Cruachan and Kinlochewe on 14 days.

**Bright Sunshine.**—There was a considerable deficiency of sunshine in the south-western islands; Scilly recorded 9 hours, and Jersey 17 hours less than the average. The mainland districts had an excess, ranging up to 19 hours at Tenby, 20 at Blackpool, and 27 at Pembroke. The largest aggregate was 75 hours, at Bournemouth, Totland Bay, Rousdon (31 per cent. of the possible), and Oban (36 per cent.). About Manchester the records were very small, 5 hours (2 per cent.) in the City, 9 hours (4 per cent.) in Whitworth Park, and 10 hours (4 per cent.) at Prestwich. At Hull also the total was only 10 hours.

## TABLES OF METEOROLOGICAL DATA FOR ENGLAND AND WALES AND THE ISLANDS IN THE ENGLISH CHANNEL.

*Prepared in the Meteorological Office under the direction of*  
*W. N. Shaw, LL.D., Sc.D., F.R.S.*

In compiling the following Tables (pp. 84 to 93) the stations have been grouped into eight Districts, namely, 1. London; 2. England, Central; 3. England, South-East; 4. England, East; 5. England, North-East; 6. England, North-West with North Wales; 7. England, South-West with South Wales; 8. The Islands in the English Channel. Each of these Districts is represented by a number of stations ranging from 3 to 13.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

The stations selected, with the names of the Observers, are shown below.

## LIST OF STATIONS AND OBSERVERS.

Station.	Observer.	Station.	Observer.
1. LONDON:—		4. ENGLAND, E.:—	
Tottenham ..	J. F. Butler-Hogan, M.D., LL.B., for Urban District Council.	Cromer ..	W. H. Archer, for Urban District Council.
Camden Square	H. Robert Mill, LL.D., D.Sc.	Hillington ..	Rev. H. E. B. Ffolkes, M.A.
Westminster ..	The Meteorological Office.	Norwich (Eaton.) ..	A. W. Preston.

\* The Summary for "London" is for three calendar months. The "difference from average" is computed from the data for Camden Square, Norwood, and Kew, the average used being that for the 35 years 1871-1905. (Sunshine, 25 years 1881-1905, at Westminster and Kew.) A comparison with the averages for 65 years 1841-1905 for the Royal Observatory, Greenwich, is given in the following tables.

For corresponding values for the years since 1878, see Appendix I. to the Weekly Weather Report of the Meteorological Office, 1908.

## NOTES ON THE STATISTICAL TABLES.

**Hours of Observation.**—The hours of observation are indicated by the type in which the names of stations are printed. Clarendon, normal climatological stations, 9 a.m. and 9 p.m.; **BLACK CAPITALS**, telegraphic reporting, normal climatological stations, 7 a.m., 1 p.m., 9 p.m.; Roman, telegraphic reporting stations, 7 a.m., 6 p.m.; *Italics*, auxiliary climatological stations, 9 a.m. only (Ventnor, 9 a.m. and 6 p.m.) At stations marked \* an additional observation is taken, at 3 p.m. in the case of stations printed in clarendon type, and at 1 p.m. in the case of stations printed in Roman type. These additional observations are used in preparing the wind summaries, and in computing the number of days of overcast or clear sky. At telegraphic reporting stations (black capitals or Roman type), the results given under "hygrometer" and "cloud" are based on the morning observations only. At Lincoln and Wakefield (October) the hygrometrical results are based on the 9 a.m. observations only.

**Barometer.**—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 9 a.m. only, or 9 a.m. and 9 p.m., or 7 a.m., 1 p.m., 9 p.m., or 7 a.m. and 6 p.m., as the case may be.

**Rainfall.**—The amounts are for the 24 hours commencing at the time of morning observation.

**Weather Phenomena.**—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the mean of the estimates of the "amount of cloud" at the fixed hours of observation is less than 2, and as an "overcast" day if the mean is greater than 8.

Cloud (0-10).	Rain and other forms of Precipitation.			Weather, Number of days of										Wind. No. of observations at 9 a.m. and 9 p.m., or at 7 a.m., 1 p.m., 6 p.m., or 9 p.m.

**Wind Summaries.**—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours (see above). At Falmouth, Kew and Stonyhurst the wind observations are based on the records of a standard Robinson anemometer (factor 2.2). (At Plymouth and Southport the equivalent values are obtained from a Dines Pressure Tube Anemometer.) Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales.

**Averages.**—The averages used are—Temperature and Rainfall for the 35 years 1871-1905; Bright Sunshine for the 25 years 1881-1905. The values are published in Appendix III. to the Weekly Weather Report of the Meteorological Office for 1906.

**Royal Observatory, Greenwich.**—The averages for Temperature and Rainfall, with which the current values are compared, are for the 65 years 1841-1905. The averages for sunshine are for the period 1897-1906. The earth temperatures are taken at a depth of 3 ft. 2 ins. The daily rainfall amounts are those for the 24 hours comprising the civil day. The numbers of days in each month of the quarter which were persistently overcast from midnight to midnight were 2, 0, 2, the number of persistently cloudless days were 0, 0, 0, the number of persistently foggy days were 0, 0, 0.

**Mean Values for Districts.**—The monthly mean values for districts for temperature, rainfall and sunshine are computed from the data for those stations which are included in the Weekly Weather Report of the Meteorological Office. The selection of stations is not identical with that included in this Report. The district values, as quoted, are comparable with the statistics published in previous issues of the Weekly Weather Report of which a Summary is in course of preparation. The averages with which the current district values are compared are for the 25 years 1881-1905. The district values for amount of cloud and earth temperatures are taken from the Monthly Weather Report of the Meteorological Office.

## INDEX OF URBAN DISTRICTS.

As existing on 31st December, 1909, together with a reference to the number of the Registration District and Sub-district in which each is situated. See pages 6-69 of this Return.

Urban Districts which are County Boroughs or Municipal Boroughs are indicated by the letters C.B. or M.B. Those Urban Districts marked \* have been created, and the boundaries of those marked \* have been altered since the Census of 1901. The exact constitution of each Urban District and of each Registration Sub-district at the time of the last Census is shown in Tables 9 and 12 respectively of the Census County Volumes. Of the 1,171 Urban Districts (including County, Municipal, and Metropolitan Boroughs) 156 were each co-extensive, at the end of December, 1909, with one or more Registration Areas.
